tube things.
Meanwhile more and more pressure is put on the band
allocations. Sigh.. oh
for those days when you could get hot with the gap... spark
gap that is...
Oh? those days are gone eh? obsolete you say... well so is
the "amateur radio,
ham, elmer" or what have you. The days of exciting radio
toys are passing...
fast.
You just wait for the coming bio/nano revolution, it won't
be long now. When
that stuff (FRPG's) goes surplus how you going to keep them

down on the Radio
farm then? Say by-by to all or at least most of the current
seriously under used
frequencies we do have. Then what? Reconstruction's?
Reenactments? Radio models?
I hope you know what the exhibit will say... "CW, the end of
radio as we knew it".

Remember the Dinosaurs.
and,
the "Hams".
Both good examples of the walking dead.

Hello All!

I'm trying to select a scanner. I live in Orange County and I'm wondering what I'd be missing out on if I decided NOT to buy a trunk tracker.

A related question: What kinds of trunking systems are in use around here? Would a 245XLT get the job done?

Another question: How useful is the extended coverage of the R2? I understand that it's not a very good HF receiver, but is it good enough to be useful? Is there anything interesting above 1GHz around here?

Thanks,
RM

Don't cloak yourself in fake mystery.

What are the implications?

They are:

ONE single message, EIGHT newsgroup flags attached to it.

I don't assume, these are unspeakable implications. Or did you really
believe, that a message posted to eight newsgroups criss crosses the
internet as EIGHT individual messages, consuming eight times the
bandwidth? The designers of internet had more brains than that.
Though you can read the message in eight groups, it only exists ONCE.

I highly recommend you buy a trunk tracker. OC Fire is on a motorola trunk system and now the OC Sheriff is on it. There is very little public safety traffic on conventional now.

My best one is I put a radio on layaway a 2030somthing scanner
on a 99.95 sale. When I went to pick up the unit, first the
sales guy tried to give me this giant home reciver for stereo
then came back with and nice 285.00 2040 800mhz scanner. So i
promply paid the 99.00 for it. Thanks radio shack ,their prices
are outrageous!!!!Service even worse.

There are several red flags raised by this auction. The seller's ID joined eBay in December and has never bough or sold anything there under this ID. The top 4 bidders' ID's all joined eBay Saturday, and have never bought of sold anything. Even if the current bid were $1.99, with this pattern of seller and bidders, I wouldn't touch it.

I would like to buy a pro 2026 mobile/base scanner. Either a 200-148 or
a 200-148A version if anyone has one who is interested in selling one.
Must have mounting bracket and be in good condition.

What a tangled web they weave at the ebay!

Charley Harp <charp@htonline.com> wrote in message
news:s9cf0k3ter2167@corp.supernews.com...
There are several red flags raised by this auction. The seller's ID joined
eBay in December and has never bough or sold anything there under this ID.
The top 4 bidders' ID's all joined eBay Saturday, and have never bought of
sold anything. Even if the current bid were $1.99, with this pattern of
seller and bidders, I wouldn't touch it.

No. There is no such domain as zworg.org (2 of the bidders domain) and
usa.com is infospace.com, they don't supply email addresses.

Hello,

I have a few older Bearcat (pre-Uniden) scanners
which I would like to get crystals for. Anyone know
of a good source for these?

Thanks, Fritz.

The other VHF frequency that appears to be in use at the crash
site is Marine Channel 83 - 157.175

YEP!

Several years ago I was doing installation work for the local Radio Shacks. I had a customer bring a car alarm system to me. I installed it and determined that the main unit was defective.

The customer returned the main unit to the store and got a new main unit.

Several weeks latter another customer can to me with the same model alarm.

I noticed that the box was opened and some hardware was missing. I then loked at the serial number on the main unit, and it was the same as the one from a few weeks before!

I contacted the store manager, and he acted like "So What!" I then called the District Manager and got the same attitude!

I no longer do Installs for R/S and am very carefull as to what I buy from them.

Two guys were sitting on a park bench. One turned to the other and
asked, "Are you a Liberal or a Conservative?"

"I'm a Conservative," the other man proudly replied.

"Why are you a Conservative?" the first man asked.

"Because my father was a Conservative, and so were my grandfather, my
great grandfather, and his father before him," replied the other man.

"What if your father was a jackass, and so were your grandfather, your
great grandfather, and his father before him?" persisted the first
man. "What would you be then?"

The first man thought for a moment, then replied, "A Liberal."

VFO = Variable Frequency Oscillator. "Tunning Knob vs. punch in freq.
via buttons"

73 = Best regards. This is a term used by Amateur (HAM) radio
operators. Sort of left over from the Morse Code (CW) days when you
abreviated as much as posible, and used codes that were 2 or 3 letters.

What i recommend you do is buy pager traps for those bands. For example 153, 930, and 454 bands. There are traps sold thru many scanner magazines that will drop out those bands. Which if your scanner has a agc circuits it will tend to boost the other band reception making up for the loss of the in line traps.

Source record: 94919

The T/T III is suppose to do all that the BC245 does, plus EFJ LTR systems. It also has WX S.A.M.E. Alert.

Here is some text on the radio that was supplied to me.

New Bearcat 780XLT base/mobile

LAS VEGAS, Nevada - Uniden America Corporation announced at the start of the 2000 International Consumer Electronics Show a new addition to its line of scanners, the BC780XLT, a mountable radio scanner that features innovative new Trunk Tracker III and Smart Scanner technology. Equipped with Trunk Tracker III technology, the BC780XLT will track Motorola, EDACS and now LTR (Johnson) trunked radio systems.
"The BC780XLT has been built with the most advanced features in scanner technology, such as the ability to detect when a transmission changes frequencies on any analog radio systems listed above, and then automatically follows that transmission," said Al Silverberg, president of Uniden America Corporation. "Trunk tracking gives consumers the ability to listen to entire conversations on a trunking radio system."
In addition, the BC780XLT also will be equipped with SmartScanner technology, which reduces the hassle of finding local frequencies and programming them one by one. The SmartScanner feature downloads local/national frequencies into channels available in a users' Zip code, through the use of an external modem or a PC. If connecting to a computer, software can be downloaded from the Uniden or Communications Electronics web site at http://www.usascan.com. The BC780XLT scanner is then able to dial into a pre-programmed, 900 number that identifies and automatically downloads the closest frequencies into channels.
"The Bearcat 780XLT scanner should be an outstanding product because it's packed with unique features scanner users need to monitor multiple communications systems. Our government buyers are thrilled with the smaller size which makes it very useful for mobile use. This scanner is so popular, over 1,500 product reservations and inquiries for the Bearcat 780XLT were received before Uniden's product annoumement. Pricing for this item should be firmed up about April 17, 2000 once the operating software and hardware is finalized for the Bearcat 780XLT scanner.

Additional features of the Uniden Bearcat BC780XLT scanner include: 500 channels and an alpha/numeric display. This new scanner is scheduled to be available in April, 2000 for a suggested retail price of $379.99, but DAT2 Communications has been told to expect to be able to sell it for $220.00 plus shipping.

You'll find the most asked for features in this new scanner. Designed for the professional scanner user or scanner buff, the BC780XLT has the

following features:
500 Channels, 10 Banks, 25 MHz.-1300 MHz - excluding US cellular frequencies. Allows you to program your favorite frequencies into banks and channels. Also includes continuous band coverage.
Trunktracker III - Coverage of Motorola, Ericsson, and now EF Johnson LTR trunking systems.
Alpha Numeric LCD Display - Enables the user to label both bank and channels with alpha text in addition to accessing the software menu system using two line alphanumeric display. Easy alpha tagging.
CTCSS/DCS - Allows the user to lockout, assign and scan for CTCSS and DCS tone codes.
S.A.M.E. Weather (Specific Area Message Encoding) - Can be programmed to receive special localized weather warnings broadcast by NOAA. Specific Area Message Encoding (S.A.M.E.) weather alert. S.A.M.E. is NOAA's coded emergency weather signals that identify a specific geographic area affected by an emergency. In weather alert with S.A.M.E. mode, your scanner functions as a county specific severe weather warning radio. To obtain further information about S.A.M.E. and FIPS code, visit http://www.nws.noaa.gov/nwr/index.html . The BC780XLT can decode the 6-digit Federal Information Processing System (FIPS) code established by the National Weather Service (NWS). This FIPS code identifies geographic areas in the United States, US territories and US possessions. Programming the FIPS code is necessary to receive S.A.M.E. alerts about weather occurring in a particular area. To obtain a FIPS code for your area, call the National Weather Service toll free at 1-888-697-7263 or visit http://www.nws.noaa.gov/nwr/indexnw.htm#sametable .
PC Control - With software sold separately, the user can have their computer control various functions of the Bearcat 780XLT.
Clone Feature - Enables one radio to be linked to another so all of the programming information may be copied with ease.
Smart Scan - This feature will allow for remote dial up of the Uniden server through a 900 telephone number which contains a database of frequencies customized for your specific US zip code.
10 Preprogrammed Service Searches - Included are Public Safety, Marine, Air, Railroad, News, TV Audio, Family Radio Service, CB Radio, Ham Radio and Special radio services.
10 Priority Channels - One for each of the 10 banks, that will be monitored every two seconds for a transmission.
Record Out Jack - Enables the user to attach an external recording device to record transmissions on a given channels or in a search range.
Full Backlit Controls - Easy to use BC780XLT, day or night.
Many more features .

John,

You didn't tell us what frequency you were interested. Below are the loss (db) for 100' at 50mhz, 100mhz and 500mhz. (source: Times Microwave Systems, http://www.timesmicrowave.com/cgi-bin/calculate and the ARRL Antenna Handbook) Note that these numbers will vary depending on the construction of the cable, especially on the dielectric utilized. Generally, RG-142 is slightly more loss than comparably constructed RG-58.

RG-8 1.2, 1.7, 3.2
RG-58 3.2, 4.6, 10.6
RG-142 2.9, 4.2, 9.7

DFD voice dispatch/fireground operations are still on VHF. The DFD
fireboat
("Curtis Randolph") is occasionally heard on the city's trunked system,
but I
can't recall if they have an 800MHz mobile in it, or if it's just been
someone with a handheld radio.

Good question! As far as "divulging" air traffic information --I
doubt you'll find anyone in the FCC or the FAA who would really care
enough to prosecute. In the spectrum of things you can "divulge" this
is about as public and benign as you can get.

Police traffic is also one of those things which I would think would
be ok, as long as you weren't listening in your car (where some would
say there is a potential for conflict of interest ;-).

Since the Internet is mostly a wire-bound affair (for now), I can't
see anyone caring that you're listening. The law says nothing about
whose scanner you're listening to or where that scanner is located.

Now if someone used one of those wireless Internet phones with
real-audio (if there is such a thing) to monitor local police traffic,
then I think someone might care. Of course, the police would have to
know you're doing this and proving it would be even more interesting.

I can't wait to see a case of this sort in Federal Court.

And you expect anyone to confess to this?

Most of us who know anything about this issue adhere to the concept of Radio Secrecy. Radio Privacy is a farce. Radio Secrecy is what any technically literate person would do.

So don't expect me or anyone else to admit anything. For most of us, it would be a breech of ethics (I use ethics because the law has become ignorant nonsense).

So I guess the mixer diode just happened to fail at the exact moment
my friend keyed up?
Remember he was parked right next to the police car, much closer than you
would ever get bassing one one "running radar" from either the median or
shoulder of a highway.
And I was not the ham who "killed" the police radar. I have never had any
luck jamming or otherwise interferring with their operation. I just
was given the dead unit, which I restored to operation by changing
a single microwave diode.
While I suspect that it is posible to overload and kill a radar with a
powerfull enough transmitter on the same frequency, I have no desire
to be around any microwave energy of that sort.
There was a thread in one of the military aero ngs concerning an english
cop who had his radar "fried' by the ECM of a fighter. There was a reference
to one of the more trusted aviation magazines, but it was several years ago
and I did not save the refference.

In practice, there are no ideal antennas for these frequencies.

Of course, you could build a discone, but it would be VERY BIG.

You could give the NG some ideas of what you're trying to receive, and
then maybe some of us could reply with an appropriate suggestion.

The closest that I came to making money was hearing some small town cops setting up a speed trap. I slowed down well in advance and avoided a big ticket. A radar dectector is easier and more reliable for this.

3178. Ambulance Freqs in the Tampa, FL area???

Newsgroup: rec.radio.scanner
Date: 2000-01-31 00:00:00 UTC
From: Kyle <anon@anon.com>
Message-ID: <01bf6c15$79d24680$e7240d3f@anon>
Source record: 94936

Hi:

I work for Hillsborough County Fire Rescue and some of my co-workers and I would like to track the Ambulance frequencies in the Tampa, Florida area, mainly so we would know when the BLS units were dispatched and if they were delayed enroute to our call.
The two BLS providers in Hillsborough county are American Medical Response (AMR) and a local company called Americare (AMC), they provide BLS not only for us (HCFR), but also for Tampa Fire Rescue, Temple Terrace and Plant City, and also the local facilities for routine and scheduled transports.
I talked to a long time dispatcher in our Comm Center, and while he didn't know the exact frequencies, he thought it probably was a private SMR trunked system that the BLS companies rented air time on, either on 800 or 900 Mhz, and he thought it was most likely a Motorola system.
I did a Deja.com search for AMR and AMC, ambulance frequencies and so forth, but came up blank, we also used a Radio Shack PRO 94 to scan what we could in the 800 and 900 Mhz range, but couldn't find anything that sounded like AMR or AMC.
So does any kind soul out there have any idea on what the frequencies might be so we can stop bothering EDO for an ETA on the BLS units and can tell the families when the BLS will be there.
Any help to us would be most appreciated and we thank you for your effort.

Kyle

Nearly every TV station in the US makes money from what they hear on the
scanner. That's how their news department makes it to the hot-breaking stories
so quickly for all the Live shots. WGAL TV8 here in Lancaster PA does it
everyday. Infact I have fun listen to the guys & gals on WGAL's frequency
chasing stories.

I worked as a salesman and as a manager for five years back in the 1970's and we always repacked and sold goods that were returned. If an item was returned defective, and it was indeed defective, they would be sent out for repair. After they were returned, we would repack the repaired unit and sell it as new. Folks, this is standard procedure for RS. Most other companies will repair units and sell them as "remanufactured" of something like that. I can always tell a repack and anytime I buy something "big" at RS, I always open the box and look at it. If it is a repack, I ask for another NEW unit> If it the last one (which is a frequent problem at RS) I don't buy it. Also, their demo units can be units that had been previously returned by a customer. Let the buyer beware. Also, RS should not sell repacks as new. There needs to be a law against this practice. Someone could have even used the product quite extensively before returning it and an unsuspecting consumer ends up buying a used piece of equipment.

As far as the original 1934 Communications Act, you were not supposed to repeat (in any way) what you heard on non-broadcast communications, ship to shore, amateur, etc. There is at least the possibility that if this law had been followed, we wouldn't have some of the current problems, like entire pieces of the radio spectrum off-limits.

You were also prohibited from making any commercial use from a received signal.

There are several Sites that offer live re-transmissions of public safety comms, I have not heard of any of them having any legal problems...yet.

My non-lawyer guess is, if you are re-transmitting your local police comms, especially if you happen to re-transmit any tactical or surveillance comms that might be in the clear, you could be in for an unpleasant visit from your local police.

NF2G has an _excellent_ Site, with applicable laws posted, at

http://nf2g.com/scannist/us_laws.html

Hope this helps

These wouldn't be the ones for sale in the current Electronic Goldmine catalog for $1.99, would they? Part number F2000.

Yes, the other responder is correct with 533 ma. but on my Casio, there is a switch for turning the picture off and in this case, the 300 ma. unit is quite enough. You want a wall wart like the Radio Shack # 273-1758 on page 380 of their new catalog. He might have enjoyed something like a used Pro 26 at about $150 where he would get the TV sound , FM radio and lots of scanning to listen to but if you are hooking this up to cable also then the Pro 26 would not get the cable channels.

I think it is time that someone with the appropriate news-request generating software started issuing cancels for messages like the one this is in reply to -- to clean up this newsgroup! I used to run a small site in Florida for news/e-mail and back then I could easily create the needed cancel headers to do the job. Unfortunately, I can't (yet) from my laptop!

3207. ICR-75 & JVFax problems

Newsgroup: rec.radio.scanner
Date: 2000-02-01 00:00:00 UTC
From: Millennium IT <tct@clara.net>
Message-ID: <1qAl4.17223$UL1.370937@nnrp4.clara.net>
Source record: 94801

Hi,
Ive had this set up for a couple of months now but cannot get ant weather fax or other to produce a fax on my laptop.
I can get & decode Morse, Baudot etc no problems but NOT faxes, although the signal is tuned in OK.
Have tried freqs in SSB/RTTY/CW, also tried tuning a couple Mhz either side of signal to see if this works.

Please can someone tell me how to do this as Ive almost given up.
What filter settings should the ICR-75 have set at for faxes?
What settings should JVFax be on?

Please keep it simple.

Thanks

Semi-dumb reply...
Does your laptop pc have a sound card?
IF so, give Christian Bock's WXSat a try.
The WUN site has it.
It is a very good FAX proagram.
Good luck.

Good proof of the axiom that both are bankrupt, corrupt ideologies that have everything to do with imposing oneself on others, and nothing to do with morality, truth, or efficacy. Both of them stink.

Not only that, but if you are using a news reader much more modern than
TIN, reading a message in one group should mark it as read in the others
as well, so you don't see it twice, unless you want to torture yourself
with everything that everyone else is doing wrong.

It's a waste of time to issue cmsg messages. 99% of all the news services out there don't accept them. So, although you may be able to successfully remove it from YOUR news server, you won't on all the other ones out there.

What are the laws regarding importing an unblocked scanner into the US. I assume there are problems here, so I think this is more of a curiousity issue than anything.

I already have an unblocked R100 I bought several years ago, and I gave up eavesdropping cellular calls long ago ... pretty boring. I do like the idea of having continuous coverage however.

Are the laws clear here .... ???

Thanks,

John

Source record: 94810

No but someone I know probably could have...several years ago he was listening to the Albany, NY 800 Mhz system on his PRO34. The PRO34 was famous for picking up cell phone calls in the allowed portion of the 800MHz band. On one of the Albany frequencies he heard a cell phone conversaton between a high level manager for a local power company and his office describing the events of a meeting he had just attended. Apparently they were going to lay off a significant number of people and institute other cost-cutting measures. He could have purchased some of their stock based on that information in hopes that it would rise. However, he believed that would have been construed as insider trading of some sort. BTW, that stock did rise when the announcement about the cost-cutting measures was made a couple of days later.

I just got through wading through all the restructuring comments.--I think I have probably been around many years longer than most of you abd I can make a few observations. The FCC has acted--it did not listen to ARRL, Fred Maia, or many others--it did listen to QCWA. But no matter, it is over and it is what we have to live with--and the guy that was complaining about dems and repubs--that is inane--national politics has very little to o with amateujr radio--I should know because I spent a great deal of time in Washington. (DC) dealing with the bandits down there. The only time the pols are going to get into the act is when your neihbor has TVI--then we have troubles

What's the deal with programming Software for the SportCat 200? Looks like Uniden dropped the ball on this one, are they in Co-hoots with Pozilla?....trying to squeeze out the independants.

Hello, I have a PRO-2026 for sale. It is Model # 200-148A with manual, AC Adapter and a BRAND new mounting bracket/hardware package from Radio Shack. The scanner was modified by a professional technician and it does receive the full cell band, it is in like new condition, never mobile. I am asking $ 200.00, prepaid by postal money order, shipped CONUS by UPS.

Nice story, Joe, but who in their right mind would think they would get caught for insider trading by listening to a cell call? There is no link between the exec and your "friend". All he has to do is keep his mouth shut and cash the check.

If you don't care about cell coverage, then why do you care about continuous
coverage in that band? That's all that is restricted on US sets.

I thought I have heard some police or some activity between 868 and 896 Mhz
that was not cellular. Must be mistaken.

I just read on Rich Well's page that it is illegal to import, so I guess it
is a mute point. Also, my R2 blanks out 829 to 849 Mhz or something like
this. Why is that ???

Just bought the scanner yesterday and cannot seem to understand some of the talk group ids. The ones I can understand are three digits while others are like 16200. What's the deal? I would appreciate it if anyone the lives in the Plano/Mckinney/Frisco area could help me out on some of the frequencies. I'm getting different fleet maps for different frequencies in the same area. Thanks

3239. SCanner vs CB antenna

Newsgroup: rec.radio.scanner
Date: 2000-02-01 00:00:00 UTC
From: JA Moran <john@analon.com>
Message-ID: <38976382.F153313B@analon.com>
Source record: 94833
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I get decent results using a magnetic mount CB antanna to feed a scanner.

The CB antenna does better on the 39-42mhz frequencies than a scanner antenna designed for 118-174 or 450-512, or 802-926mhz

It's difficult to find the right antenna for all the frequencies I have programmed in my radio. Ideally, I need 3 or 4 antennas, much like a TV antenna has different elements for each channel or frequency range. A TV channel is really a 6 mhz wide slice of frequency

a TV antenna would work too, since the 39-42 mhz is close to Ch-2, the 118-136 is close to Ch-6, and 151-174 is close to ch-7, as for UHF, that's a tossup between VHF-13 and UHF-14, or 15-20 In some areas, UHF frequencies are assigned in the 470-512mhz
range, in these areas, UHF channels 15-20 cover that area.

as for the 800mhz stuff, that's cose to UHF channels 69-83

Does anyone know if the new uniden scanner will offer alpha tagging???

I would buy a 245, but I really want alpha tagging. If it were'nt for
the crappy reviews on the Pro-92, I would get it. But, It appears by
the reviews that the pro is a hunk of junk.

The frequencies ARE public domain. The FCC assigns them and the FCC is the Government. Everything the government spends money on to develop is in the public domain. In the case of frequency assigments the user of the frequency (except for all government assignments) is in the public domain and can be researched on-line at the FCC's web site. You CANNOT copyright this particular information but you can copyright the "display" of it in a software program. The actual content is not copyrightable since it has it's source from the FCC........

I wonder if someone in the electronic business could help me. I bought a casio hand-held TV for my grandson. He is sightless, but loves to listen to the TV news shows. I need to buy an adaptor for it. Now, it says 6 volt, 3.2W, and runs on 3 AA bateries. I have a 6 volt converter, 300mA Negative center post which is called for. It works fine, but is it going to do any harm to the TV? Is 300mA hight enough?
Thanks in advance for any information you can give me.....

>>
>>
>>This is just your run of the mill 2004
>>
>>Hurry Hurry Hurry before I jump in with my bid :-)
>>
>>GR
>>

forget it.

Look at the bidders, the top 4 all have 0 feedback. Less than a 1 in
10 chance any transaction ever takes place

Lets look farther.

Of the top 4 all placed their first bid ever on january 24, the same
day that this scanner was listed by a guy with a 0 feedback.

Of the top 4 two of them have email acounts from zworg.com.

these four placed bids on other auctions along with a user by the name
of glasstubes who also has a 0 feedback and who also placed his first
bid ever on january 24

this glasstubes guy won three auctions by the user randybivens. The
same guy who put this 2004 up for auction.

randybivens has put 6 items up for auction 4 are compleated. All were
won by these guys who placed their first bid on january 24.

It looks like this guy is using these other acounts to bid up the
prices on his auctions.

To bad the guy forgot that he wasn't suposed to win his own auctions.

How much does this guy now owe ebay.

3265. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <87831h$8k8$1@news.hawaii.edu>
Source record: 94703
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

The TT-III or BC780XLT (it's working title), will offer two lines of alphanumeric tagging. Take my advice and don't even think about the Pro-92. You'd have more fun with a cheap set of walkie-talkies. In fact you'd have more fun with ONE walkie-talkie than you would with the Pro-92.

3281. Yupiteru PRESET Bandplan?

Newsgroup: rec.radio.scanner
Date: 2000-02-02 00:00:00 UTC
From: abrock@maxinter.net
Message-ID: <8ECE57E33abrockmaxinternet@207.126.101.100>
Source record: 94719

I'm trying to decide on a new radio, and I'm torn between the Yupiteru 9000, 7100, or the AOR
8200. My main concern is ease of use and sensitivity. I've heard the Yupi's are great in both
areas, but my only glitch with the Yupiteru is the PRESET bandplan. I read that Javiation has a
mod to re-enable the PRESET bandplan for the Yupiteru 9000, but this is the Japanese
bandplan. So, my question is, how useful is the Japanese bandplan in the US? Is it basically a
waste of time to try to use PRESET in the US? Is there a way (once a computer interface is
developed for the Yupiteru 9000) to use a computer interface to "re-program" the bandplan for
the US on the Yupiteru 9000? This is the one reason I am considering the AOR 8200, and that
is the ability to modify the bandplan permanently in the radio. It's ashame that a radio as great
at the Yupiteru 9000 was never developed for the US, with a US bandplan. I can do without
the cellular frequencies. Also, what about the Yupiteru 7100. I've heard they are better
performers than the Yupiteru 9000?

I have been using Bearcats for about 10 years now, and I'm ready to take a step forward. :)

I would appreciate anyone's thoughts...

3282. FS: Yaesu FRG-9600 Communications Receivers, 60 - 905 mhz

Newsgroup: rec.radio.scanner
Date: 2000-02-02 00:00:00 UTC
From: ebaysucks <ebaysucks@web.com>
Message-ID: <RiWl4.356$Pc7.9283@newsread2.prod.itd.earthlink.net>
Source record: 94720

These receive AM-N, AM-W, FM-N, FM-W, SSB and have the video output option installed.

#1 - $400 = Cosmetically very good+, operates perfectly except once in a while after a hours of play it shuts itself off. Yaesu could not find anything wrong with it. Turn it back on manually if it does shut off. Includes the original manual and a different brand AC adapter.

#2 - $450 = Cosmetically very good+, operates perfectly and includes the Yaesu original manual, the Yaesu service manual, auto mounting bracket / mounting bolts and the original Yaesu AC adapter.

#3 - $500 = Cosmetically excellent, operates perfectly and includes the Yaesu original manual, the Yaesu service manual, auto mounting bracket / mounting bolts and the original Yaesu AC adapter also comes with the original Yaesu box.

These prices are plus shipping in the continental United States which is a fixed price of $15.

I kind of brought that fact up to him when he told me about it. He's a pretty straight-laced kind of person and didn't want to even chance it. The only reason I knew he was telling the truth is that he called me the night before the story broke in the local media and told me about the cell call he overheard. I wish he had told me a few hours earlier ...could have made a few bucks. ;)

Hi.

I am a newbie at scanner stuff, and I have a simple question.

I recently bought an Albrecht AE80H scanner which as some "bands" pre-built.

A friend of mine told me that it ist possible to modify it so that it can make a continuous coverage, without gaps.

Is it possible? Can AE80H be modified? If so I would like to have more info on that issue.

Thanks.

More specific to SM county are the books by Robert Kelty.

You can get then at:

Scanners Unlimited
1199A Laurel Street
San Carlos
650.573.1624

Scanner Outlet
410 S. Norfolk Street
San Mateo
650.344.5012

or Kelty sells them at the Ham Radio Flea Market at Foothill College (it
doesn't start until March I think.)

3298. Re: Yupiteru PRESET Bandplan?

Newsgroup: rec.radio.scanner
Date: 2000-02-02 00:00:00 UTC
From: barry <bumologist@pipeline.com>
Message-ID: <MPG.13024994a8b7744e989694@news.pipeline.com>
Source record: 94736

In article <8ECE57E33abrockmaxinternet@207.126.101.100>,
abrock@maxinter.net says...
> I'm trying to decide on a new radio, and I'm torn between the Yupiteru 9000, 7100, or the AOR
> 8200. My main concern is ease of use and sensitivity. I've heard the Yupi's are great in both
> areas, but my only glitch with the Yupiteru is the PRESET bandplan. I read that Javiation has a
> mod to re-enable the PRESET bandplan for the Yupiteru 9000, but this is the Japanese
> bandplan. So, my question is, how useful is the Japanese bandplan in the US? Is it basically a
> waste of time to try to use PRESET in the US? Is there a way (once a computer interface is
> developed for the Yupiteru 9000) to use a computer interface to "re-program" the bandplan for
> the US on the Yupiteru 9000? This is the one reason I am considering the AOR 8200, and that
> is the ability to modify the bandplan permanently in the radio. It's ashame that a radio as great
> at the Yupiteru 9000 was never developed for the US, with a US bandplan. I can do without
> the cellular frequencies. Also, what about the Yupiteru 7100. I've heard they are better
> performers than the Yupiteru 9000?
>
>>>>I don't really think the bandplan on the 9000 is any big deal,you
just program your memories,and your search banks and that's it.The
bandplan difference might affect you slightly at first,because you
have to change the mode or steps,but it's a halp really,because it
MAKES you learn how to do it,so when you want to set up a new search
limit pair,or just search from a VFO freq,you know how.I havent changed
one pair on mine since the second day I had it.And as far as channels go,
all I've done is add more memories and lock out some search freqs.
As far as the PC interface goes,I don't know anything about it,but it
would be real handy to have in case you had to reset the radio for some
reason.

Glenn - you really are the fool, aren't you????

Part of the PARG domain system purchases access from AT&T/@home & other
interent providers. For example, many domains purchase their online access
from MCI, AT&T, RainNet, Sprint, & elsewhere. With the PARG domain, we
have purchased part of our access from AT&T/@Home, along with another
provider.

Glenn, try this, point your web browser to:
www.john.parg.org

Then point your web browser to the @Home IP address you gave of:
http://24.0.49.240

Notice that then BOTH GO TO THE SAME LOCATIONS!!!!

That service is purchased from AT&T for the PARG domain!!!!!!!!!!

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

| https://haifoss.fcc.gov/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
| http://ednet.wvsc.edu/~fcc

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while supplies last! In addition, the newest version, Scannerbase XE, is available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

3314. WTB: AOR 3000 not the A version

Newsgroup: rec.radio.scanner
Date: 2000-02-03 00:00:00 UTC
From: Greg Renner <grenner@uswest.net>
Message-ID: <389A2A3F.BB88E566@uswest.net>
Source record: 94598
Cross-posted to: rec.radio.scanner,rec.radio.swap

I am an AOR collector looking for a nice AOR 3000 not the A version.
Please email me with price, condition and what is included.\

Thanks
Greg

3315. Re: 245xlt battery fabrication

Newsgroup: rec.radio.scanner
Date: 2000-02-03 00:00:00 UTC
From: Ted <miamitedNOSPAM@bellsouth.net>
Message-ID: <KZpm4.10231$vk.160004@news1.mia>
Source record: 94599

The battery pack that comes with the 245 is 4.8v. 4 "AA" batteries would
provide 6v. Won't that make a difference?

3316. Re: Ambulance Freqs in the Tampa, FL area???

Newsgroup: rec.radio.scanner
Date: 2000-02-03 00:00:00 UTC
From: Ted <miamitedNOSPAM@bellsouth.net>
Message-ID: <9bqm4.10259$vk.160499@news1.mia>
Source record: 94600

According to the 1999 Police call plus book, the only listings I saw in the
area is;
Bay Area Med exchange 464.8000

Also listed under the county is:
Hospital Ambulance: 155.2200
155.3250
Hope that this helps.

3319. Cell on Air Feq's

Newsgroup: rec.radio.scanner
Date: 2000-02-03 00:00:00 UTC
From: sdddr@yahoo.com
Message-ID: <389a387c.168787016@news2.newscene.com>
Source record: 94603

I know this question has probably been asked before. But the other day I picked up several cell phone in the air freq range (108-135). What type of cell system uses these freq's and where or why would they be located in a certain region.

Thanks
Waldo

3320. Help with an old scanners punch cards.

And a TV antenna turned on it's side works great IF all astations
are in approx the same direction. For an omni-directional antenna
with fairlly good response form about 30 to 900 Mhz I use a
Tri-Band HAM antenna(52/144/440) It really perked up my VHF-LO
reception.

3323. Trunktracker Data Discriminator Tap?

Newsgroup: rec.radio.scanner
Date: 2000-02-03 00:00:00 UTC
From: gwheeler@vmguys.com
Message-ID: <87cfd6$kq3$1@nnrp1.deja.com>
Source record: 94747

Since a trunktracking scanner has to be able to decode the data from a control channel, I presume it must have something equivalent to a data slicer.

Is there a place within the radio where the data feed is available? Could it be connected to an input of a PC? (I haven't thought about what kind of input the PC would need. Some sort of single bit, TTL level input I suppose. Where do the external data slicers connect?)

I'm wondering if it's possible to get the control channel data so I can log the trunk group IDs that are in use.

Gerry

There's a restart switch accessible through a small hole on the back. Need a bent-out paper clip to press it--do that while the scanner is off and then turn scanner on.

FYI: You can find manuals for most/all RS scanners at the Tandy site.

A friend who lives very near (50') a cell site gets the base side of
cell calls in anything with an AF amp. Including his antique Fender
Guitar amp and a very old KnightKit Star Roamer SW radio.
And yes, it even comes in on his FisherPrice baby monitor, and his TV,
CD players, turntable [This guy has more old "junk" then even I do!].
I would not want to live where he does because it can not be all that
healthy being japped with all that 800MHz RF 24/7.
It even interferres with the "sonar" [Hummingbird(spelling) LCD "fish finder].

Bull Sh*t, Who ever said a change for the worse counted.
Example:
Here in New York we have the still married wife of a unconvicted rapist, liar, adultery committer and her team of Hollyweird freaks and screw ball's. All scripting a freak show using an *acquired empty house* to make her a senator..... to make things better, LOL

She has never been on the subway or come to see her *new* favorite New York ball, and hockey team's in fear of getting the Bronx cheer as well as Booed on TV.
Yet Rev.Al (a frequent guest of every jail) and the hordes work capable healthy welfare dwellers, homeless felons, ileagels and feminist's love her.
That is can not be good a good sign, its common sense.
Keep liberals out as long as you can.
NO THANKS !

this little mishap also was reported about nine months ago
and cops who were up in the Windward side of the Island of Oahu were
not being heard when they replied to dispatcha.

they solved their problem by going over to a more reliable
source: the radios
that were working for all those years on the 150 field of
listen/talk.

ain't that special.

Ik mag dan soms met wat taal fouten schrijven, maar op me taalgebruik valt niks aan te merken. Ik hou er teminsten rekening mee dat er ook anderen de berichten lezen die ik post. En niet iedereen zit op de woorden te wachten die Webmaster NSelS hier soms neer zet (zie bovenste zin). Mocht je hier verder over willen discuseren stuur me dan maar een mailtje want ik denk dat de rest niet zit te wachten op deze postings.

Ik ben even gaan kijken op de url die je gaf, maar ik zie niet in wat ik verkeert doe er staat bijvoorbeeld :

Knip in het oorspronkelijke bericht
Het is niet de bedoeling dat je het gehele oorspronkelijke bericht onveranderd laat staan in je reactie. Probeer het oorspronkelijke bericht zoveel mogelijk in te korten en te ontdoen van onnodige stukken, zoals de ondertekening van de schrijver. Sommige programma's doen dat laatste overigens al automatisch.

Dus vertel me maar even hoe ik het wel had moeten doen.

> thought about >what kind of input the PC would need. Some sort of
> single bit, TTL >level input I suppose. Where do the external data
> slicers connect?)

Trunktrackers do contain data slicers but the filtering is usually
tuned more to Motorola systems than Edacs. Also the voltage levels will
be 0-3 volts which does not match RS-232 signal level requirements. At
the very least it will be necessary to connect an RS-232 driver to the
scanner data slicer to get the right output voltage. The CTS pin is
commonly used for input to the computer COM port.

> I'm wondering if it's possible to get the control channel data so I
can log the trunk group IDs that are in use.

Sure, Trunker will do exactly that.

Hello, I have a PRO-2026 for sale. It is Model # 200-148A with manual,
AC
Adapter and a BRAND new mounting bracket/hardware package from Radio
Shack.
The scanner was modified by a professional technician and it does
receive
the full cell band, it is in like new condition, never mobile. I am
asking
$ 200.00, prepaid by postal money order, shipped CONUS by UPS.

It does work, the importing of your own map that is, you are probably
using a different format of map co-ordinates, so it is back to the
WACARS help file!

Has any one managed to get Wacars to work OK with Windows 98 SE.

On my system all it does is to cause constantly access my hard drive
and freeze my system up so i have to re-boot

Does any one have any suggestions please.

3361. AOR 3000 reset solved

Newsgroup: rec.radio.scanner
Date: 2000-02-03 00:00:00 UTC
From: mcinnis@babe01.austin.ibm.com
Message-ID: <87cr08bcc1@ausnews.austin.ibm.com>
Source record: 94785

Well, it's so old that it's gone from my newsreader, but I fixed my
AOR 3000 reset problem.

As someone e-mailed me, take off the bottom cover, and check the back
of the circuit board near the front. (I think it's the display
board.) There's a little pc-mounted pushbutton that does a reset.

The AOR 3000 is alive and well now. Let's hope it keeps its sanity
for a while now.

These books can now be ordered on-line at http://www.TopSecretBooks.com Because you have a Right To Know!

Just thought people might like to know where they can get these types of books as well as many other Scanner, Shortwave and other Radio books.

If we start burning books, what's next, SUCKING the "bad" knowledge out of peoples brains? Here's my theory, NO KNOWLEDGE IS BAD, JUST THE WAY YOU MAY USE THE KNOWLEDGE.

3370. BC178XLT weather alert...get rid of it???

Newsgroup: rec.radio.scanner
Date: 2000-02-04 00:00:00 UTC
From: firepiper1@aol.com
Message-ID: <20000203190702.24814.00001141@ng-ce1.aol.com>
Source record: 94608

I just got a BC178XLT. The reception is better than I expected. Now the big drawback. I guess I didnt read the ad too closely because I failed to see that there is a weather alert system (a very loud, obnoxious sound) that comes with it. The Cleveland office of the National Weather Service puts out way too many of these alerts because of their wide service area. We got rid of our alert radio at the firehouse for that reason. Is there a way to disconnect this "feature?" I have 7 days to send the scanner back if not. Thanks for your help.

Probably because the power supplies for most of these Digital Cameras are
between $50 to $80 bucks a piece. That would be my guess.

Only a Couple of hundred? That's worth the risk then, At that price must only be 640 x 480...good camera's are in the $400 plus range...then I would do a bit of research before attempting just any power supply. Best thing to do is to look physically at the recommended power supply look at the specs on the brick or cube and see the polarity, voltage, and amperage. Then you can find a less expensive one somewhere else. The only thing you will actually need the alternate power for will be when transferring pics to your pc to save on batteries.

Elektra was the "Original" Bearcat Scanner manufacturer. Now Uniden of course has it. Elektra is located in Cumberland, Indiana (A suburb of Indianapolis) lot's of friends of mine worked for them as well as their main Tech. I live 8 miles from them and have not heard much in the way of them getting back into the scanner biz, but would be nice if they did with their original innovation they had in the 70's!

Four alkalines is 6 volts. 1.5v each.
Four nicads or hydrides are 4.8 volts. 1.2v each.
If you need 1.5 volts/cell, consider rechargeable alkalines, but beware of leakage if you overcharge them.

It is legal here in Canada to own , operate, and sell cell capable scanners.
For the most part however, the retail market is controlled by the U.S.
Martet, therefore, the major manufacturers make "for the U.S,. " Market.
Unfortunately, Canada gets most of the same products, with the same
limitations.
There are exceptions though.

>MAZ

Sounds like the system used by the '70s scanner made by SBE called the Optoscan. It used cards also. SBE (which stood for Side Band Enterprises) was in Watsonville, CA. I saw a booth at a trade show a few years ago for SBE; they are into computer-something now. You may want to search up SBE to find info. Your Sears scanner was probably made by them.

Good Luck!

You may have heard a phone patch between an aircraft and a maintenance
center. I believe the maintenance operations center can be patched to
an individual aircraft, particularly when they're doing test hops.

> extinct.

You're changeing the subject instead of answering the question, Robert. The subject is not about change. The subject is about why a date is a reason for change.

What does a date have to do with change? Why does a date justify change? Why do people say, "its the year 2000," to justify the change they want, when the year 2000 is a date, not a reason?

It would make just about as much sense to say the sky is blue, so we have to change ... (insert whatever). There is simply no connection between the two.

I have been receiving cordless transmissions on my scanner. I can hear both sides of the conversation in the 43-47 range. However, in the 900-927 range, I can only hear one side of the conversation. My question is why, and is there anything I can do about it?

3400. AOR AR8200 PC software updated with GPS support v1.17.0

Newsgroup: rec.radio.scanner
Date: 2000-02-04 00:00:00 UTC
From: AOR UK LTD <info@aoruk.com>
Message-ID: <w86G2AApSsm4EAc8@aoruk.com>
Source record: 94638
Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

On 3rd February 2000 a new version if the AOR AR8200 'workshop' software was uploaded onto the UK web site. The ZIP file has also been forward to AOR Japan and AOR USA so should appear on their respective web sites in the near future.

The new version 1.17.0 supports a GPS unit connected to a second serial port for positional data to be added to the logging feature. A small extract from the README.TXT file is presented below for information.

The primary UK web site with a direct link from the home page to the ZIP file is:

http://www.aoruk.com

This AOR UK site is also mirrored at:

http://www.aor.co.uk
http://www.radioreceiver.co.uk

Other AOR corporate sites are:

http://www.aorja.com
http://www.aorusa.com

The download is specifically at the exact location:

http://ww.aoruk.com/software/ar8200_v1.17.0.zip

Note: Download this file to your computer then EXTRACT IT IN FULL before installing, do not try to install directly over the internet or from WITHIN an application such as WINZIP. An extraction utility (WINZIP) is available in evaluation format free from the following site:
http://www.winzip.com/

Text extract follows:

Version v1.17.0 and above supports the use of a GPS unit compatible with the NMEA 0183 v2.0 protocol. This is a marine standard for serial data exchange between navigation and other equipment, but can be used to transfer position information into a PC using a spare RS-232 serial port. If you have a mobile application for this software and are using a PC with two serial ports, you can connect you GPS unit to one serial port and have the AR8200 on the other. As you change position while searching/scanning or using the single frequency watch feature with logging enabled, you position is added to the log. This is useful when returning from the field to determine the proximity or range of the transmissions you were monitoring when on the move. Log reports show

your last position associated with the active frequency.

To check that your GPS is compatible, it must comply with the NMEA 0183 v2.0 standard and include the RMC sentence as follows:

$GPRMC,120741,A,5152.985,N,00205.733,W,000.0,349.4,230100,004.1,W*7F

You can confirm this by configuring your GPS unit for NMEA 0183 v2.0 output, connecting it to your PC (usually your GPS manufacturer supplies a suitable adapter cable) and running a standard Windows RS-232 terminal program such as HyperTerminal or Windows terminal. You need to select the appropriate serial port and a baud rate of 4800 bps (the baud rate is fixed). You should then see a continuous stream of GPS NMEA sentences (each beginning with a "$GP"). Amongst them you should see an RMC sentence in the same format as above.

<<43-47 range. However, in the
900-927 range, I can only hear one side of the conversation>>

my guess.. in the 43-47 range, you've programmed the base freq, in the 900-927 range, you've got only the handset freqs. www.strongsignals.net/htm/faq.htm has FAQs for frequently asked frequencies, the second two FAQs will give you info on the base freqs.

A cordless phone uses 2 seperate frequencies. One for the handset (One Sided) and the other for the Base (2 sided). Try to find the frequency for the base unit then you will hear both sides.

Is there any other program that can operate this scanner (pro-2052) without being so primitive?

This guy "Kevin" must be a loon - taking lessons from Mackey perhaps.

Rich Wells has done so much for this hobby, has by far the best scanning web site, and usually avoids the senseless flame wars so prevalent on this NG. This Kevin guy needs to see a "shrink"... soon.

or this one: any body have any idea for why
this 2052 body goes off tracking and does
the 800 bit?

then some many minutes later it goes back to
scanning and all seems well. then it goes back
off TT and onto 800 and seems happy doing it
for some many minutes and then etc. repeats
over and over again....

so, any body have any input as to the reason this
occurs?

For Sale: Bianchi Leather Swivel Radio Case - NEW!!!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=248313509

Only 2 months old!
Leather w/swivel attachment
Designed to fit any medium to large radio. Was used previously with a Motorola Saber but can be used by any Vertex, Maxon, GE, etc. portable radio, and it has a stretching strap to accomodate just about any radio
No scratches or other cosmetic defects

This unit is in excellent shape (10 out of 10 cosmetically). I bought it only 2 months ago and have only used it once! Selling because I no longer need it (have a different radio now). Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

The Discone antenna is the one you will see on every modern ship in every ocean in the world? (of course the shipborad one is for lower frequencies and is MUCH larger) Yes, It IS a good antenna, BUT it has NO gain. VERY widbanded though.
Gunner Dave

Tomas - NW7US wrote:

<snip>

> Anyone want to express opinions regaring building all the coils and capacitors out of raw materials and junk? Like chewing gum wrappers??? Oh, that'd mean I'd need a TR switch setup to isolate it during transmit... hmmm. Dratted QRM.

Since the stuff I snipped had no mention of any specific construction project, I'll assume you meant the traps for your gravity-inverted vee.

Why not? As I've mentioned here (RRAA) before, Hams used to be able to build their own _tubes_! Tasks like winding coils and stacking caps are cake compared to glassblowing, and much safer (silicosis).

There is the problem of assuring value stability once the parts are built. You can calculate of course, but edge effect creep in with caps, and inductors like to "grab" nearby magnetic materials and change their values. Coils are fairly easy to tweak if you make provision for that during construction, but trimming a homemande cap can make you crazy. Choose wire size and foil/dielectric for power-handling capacity, and go for it. Oh, and don't worry about the smoke, it's traditional ;>)

I used to get quite a bit of interference in that band from regular cell phones on one of my old scanners. I admit to not knowing the first thing about image frequencies and intermod or any of the other technical reasons for hearing stuff on other frequencies than they were supposed to be on, but I always assumed that's what it was. I've never heard of intentional telephone broadcasting in the civ aviation band.

> I'm glad Rich has received some 'goodies'.

You might not feel that way if getting "goodies" affects his point of view about
certain products... He's been a long-time supporter of Percon, for example. (I'm far from a fan of that company and think their CD-ROM products are second-rate). Not coincidentally, Percon is now one of his first advertisers.

How about those special dealer mentions that he posts so prominently? All of them have either given or lent him products. That's all it takes to be recognized, I guess.

I strongly advocate that Rich should get paid for his efforts--and I'm surprised that it has taken him so long to make the transition from a public to a paid service. However, I am equally adamant that he doesn't pass off the info on his site as an unbiased public service when he's getting freebies and such.

In any case, more power to him for all of his hard work. Just don't put lipstick on this pig and say that it's pretty--it ain't. Not until there is an admission that this is a commercial site that is passing itself off as a "public service."

This is a Radio Shack 200 channel base scanner that covers

30-54, 108-137, 137-174, 380-512, 806-823, 851-868, 896-960

The date code is 2A4 so it can do cell with a mod. I have not done the mod but I will include the instrunctions to do it.. It involves removing a diode and putting in a different one.

Comes with box and antenna but no manual. The manual is available online from Radio Shack.

$100 shipped to your lower 48 address via Fed Ex 3 day.

Greg

I've been wondering about this same topic. A relative of mine has a degenerative eye condition and I think properly equipped scanner may someday be useful to them. The Icom page doesn't appear to have much detail on this option, aside from noting that it "Provides audible confirmation of an accessed band's frequency." Has anyone out there used this combination? Are there any other options that come to mind for a visually-impaired user? Thanks!

I own an ICOM IC-R8500 receiver equipped with the speech option board.
It works like the older ICOM radios equipped with
speech boards, e.g., the IC-R7100A and IC-275H.

When you push a button, a female voice announces the frequency digit by
digit
followed by the word "Megahertz."

You can also enable the speech board to announce the frequency
each time the radio stops on an active frequency during a scan
operation.

I use the speech option when recording transmissions on a tape recorder.

Too bad it doesn't announce the channel number or bank number.

Bryan Costin wrote about the ICOM IC-R8500 equipped with
the speech option:

It works fine for me, running Win98SE. I left it up for about 24 hours straight earlier this week without any problems. In fact I was amazed how well it decoded the messages just using audio from the headphone jack.

It could be lots of things and I can't really help much, but a hard lockup can often be caused by a resource conflict of some sort. Check your sound card configuration and make sure there aren't any IRQ or DMA problems hinding anywhere. While you're at it you may want to verify that your sound drivers are up to date. Can't hurt, and it might help. Good luck.

Becasue they are signals radiated in the Horizontialplane where
as ALL scanning frequencies of interest are radiated in the
Vertical pl;ane.
IE; you can introduce significant signal losses

I have for sale a Radio Shack PRO 2026 scanner for sale
In very good condx It is a 100 channel scanner with service search, Two second scan delay, lock out function, five memory banks of 20 channels/bank, priority channel,and monitor memory.
covers 29.00-956 mhz in various bands (yes cell open)
Runs off 12 volt, excellent for mobile etc.
Will ship for $135, or swap for a frequency compatible handheld (does not have to be cell opened)
Ron

>
> -Andrew

You have to use the cable wich is specified for this usage. When there a 50-ohm-cable is recommended you have to use one... there are also specs using 75 or 100 ohm cable.
When you are using TV-cable (normally 75 ohms) instead of 50-ohm-cable (RG 58/U for example) this may cause problems.......
Be sure to use the right cable and maybe you have to terminate the end(s) of the cable???? The connectors (BNC??) must be fitted very carefully......

Try Jan Crystals or Bomar Crystals, if you cannot find them, try a search for crystals
on the www. Also, you could look for advertisments in the Popular Communications Magazine.

For fax set the filter for SSB not a narrow filter like you use for
CW. Also I think you use USB mode, been a while since I have played
with JVFax. The docs should tell you what mode. Last thing is you
tune about 1.7 KHz off the center freq if I remember correctly. Again
the docs should say.

Message-ID: <87hoab$e4j$1@bob.news.rcn.net>
Source record: 94559

I have a Pro-2042, I have already installed a Euro OS-535 in it (118 channels per second with full coverage is nice, and no problem breaking squelch at that speed). I am installing a discriminator tap sometime this week, and am going to be hooking up a 2/4 level FSK device.

I have heard of a mod to replace the filter, can anyone give me more info on this? Are there any other popular mods? And lastly, I have been thinking of picking up one of the modification books, which one has the most coverage of the 2042?

Thank you, and just post your reply to the newsgroup.

Plainly that was a STUPID move concidering the Cost of RG-6(THE
PROPER CABLE TO USE.
And Think about it. YOUR modem IS operating in a Transmit MODE.
You have introduced a Reflection problem in your System which
can cancel out signals. RIP out that cable and use yuor GHead for
something other then a "Hat Rack" nezxt time.

Does anyone know how to fabricate the PC to radio cable?
It sells for about $40, and should be easy to make.
Al

Centre freq.? is this the strongest signal?

Narrow Filter? unsure as there are many filters but dont say 'Narrow'.

Sorry to sound slow but these things make all the difference to getting it
right & taking a hammer to a radio!

3463. Uniden Date Codes

Newsgroup: rec.radio.scanner
Date: 2000-02-05 00:00:00 UTC
From: scannerdweeb@aol.comicstrip
Message-ID: <20000205170015.02076.00001645@ng-fd1.aol.com>
Source record: 94569

Decoding Those Uniden scanner Date Codes

Decoding the date code on your Uniden Bearcat scanner is as follows.

The date code consists of a two digit code representing the month followed by another two digit code representing the year.
For example, the date code

0AID would decode to Jan 1994 0A = Jan (A=1, first month of year) ID =94 (I=9, D=4)

0EIC would decode to May 1993 0E = May (E=5, fifth month of year) IC = 93 (I=9, C=3)

0CI0 would decode to March 1990 0C = March (C=3, third month of year) I0 = 90 (I=9, 0=0)

A=1, B=2, C=3, D=4, E=5, F=6, G=7, H=8, I=9, 0=0

Have a GREAT one !

I would like to ad my two cents worth. My belief is that Mr. Wells provides a much needed service. I have relied on his reviews to steer me in the right direction for my scanner purchases. If I was to wait for a review on a certain scanner in one of the national radio magizines I am afraid that I would have to wait forever to read about a certain scanner. My only kick is that I wish his reviews would come out even sooner. But then he would be rushed and we would'nt get a complete and accurate review. If this Kevin thinks he can do a better job then I say more power to him. i would imagine if he were to recieve a few "goodies" along the way he would have very little to say. Rich is #1 in my books. Thanks, Jim

3471. Trade for Pro-2052 or similar

Newsgroup: rec.radio.scanner
Date: 2000-02-05 00:00:00 UTC
From: "Don Bertone/www.qrz.com KK6AN" <dbertone@flash.net>
Message-ID: <389CB6BB.B1241FF9@flash.net>
Source record: 94577
Body handling: Binary attachment payload not displayed: dbertone.vcf

Paragon 1 with RS-232, Geihl chip, general coverage TX, 6.0 and 2.4
filters, may have FM for $799

OMNI-D series B with WARC kit (not installed) matching PS, 705 desk
mike $450

Powermite PM-3A with 40 and 20 meters QRP rig, matching PS $175

OMNI-D series A with PS, Turner 251 desk mike $325

OMNI-D series B with WARC, heavy duty PS, Shure 444 mike, 229B 2kw
tuner, remote
VFO, Hercules 444 solid state amp with PS, Ultramatic keyer $1600-
will not split up

253 autotuner $750 take trade in as I want two 238 tuners

WANT 238 antenna tuner- will buy outright

This is the smallest 4 watt HT made. Nice, CLEAN shape with 16 channels
that I will program for
you.
It is currently programmed between 434 and 470 mhz but will go farther
either way.

Comes with hardly-used slim battery date code 945, stubby duck

$325

Motorola M75 cellphone that I bought NEW a year ago.

Also have Micro Digital Lite on the 800-900 cellular band which means
that you get to make calls without dropping out and from longer
distances unlike PCS.. I bought it new a couple of years ago.

It comes with leather belt case.

2 overnight drop-in chargers and 1 Intellicharger fast desk charger

Motorola Micro Tac Lite phone thrown into this package. Works but is
not in service right
now. Give it to your wife as all cellphones work on 911 by law whether
in service or not.

7 BRAND NEW in package slim Nickle Metal Hydride batteries

2 BRAND NEW Nickle hi-cap batteries

3 used for a year still work good hi-cap batteries

5 used but still good slim batteries

All batteries are Motorola, not some off brand

$400/bo for everything

I will split this package up if you only want some of the things.

I am selling this to get a Star Tac instead. It is in good shape and looks good.

By the way, there is a National Serial Number List that the cell services all look at before they activate any phone. If you bought a "good deal" at a flea market of from the "guy in the alley" you can kiss your money goodbye. I bought my phones new so I know it is a safe one.

Weider home gym cable and weight model. Looks just like fitness club equiptment

This one needs some space to set up as it has 4 workout positions around

it and takes up 25 squre feet just sitting there.

Would go great in garage, basement, extra room etc. Don't plan on sliding it under the bed when you are done with it. It is set up now.

Cost $1800 new and still looks new. No tears in seats and grips look good along with the paint. By the time you wear this one out you'll look like Hulk Hogan!

I am in San Francisco and and can help with delivery and setup. It will go right out my garage door and most of it can stay assembled for the move.

Will take something in trade as I plan to use the room for something else.

$1800 new- sell for only $500! Why pay that much for a new single purpose unit?

Don 415.467.9669 evenings

Motorola Maxar trunking radio that was converted to conventional ham band
use. I want $300 for it since there is a lot of work involved to convert radios to 900 mhz.

TRADE for TenTec gear or maybe some other stuff. Send your list

Kenwood TR-7400A 2 meter mobile radio which is collectable in it's own right. I think it
was their first PLL radio. With original box, mobile bracket, mike.

Kantronics Packet Communicator 3

All the cables, software and docs.

IBM ThinkPad laptop. Display works but the LCD itself is cracked. I use a regular
monitor plugged into the back.

$150 or trade for something. Will take TenTec gear. Don't ask what I want; just tell me what you have!

Patrolaman PRO-78 8 channels Xtal VHF

[One or more binary attachments are retained only in the source text.]

3472. Re: Comments on the AOR7000 Rcvr?

Newsgroup: rec.radio.scanner

Source record: 94578
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

From my January 1999 AR7000 review in Monitoring Times magazine:

"...We find our AR7000's menu driven squelch difficult to control, the display blurry at most angles, and FM searching problematic. Computer commands are not documented and should be.
Despite these glitches, the AR7000 packs a lot of features into a sturdy desktop package and offers much better shortwave performance than contemporary handhelds. The IR remote control, NTSC video output, accessory jack, and RS-232 serial port are attractive and we like the adjustable rescan delay, step size flexibility, and selection of AM and SSB bandwidths."

Personally, I prefer the ICOM IC-R8500 to the AOR7000. My IC-R8500 is easier to operate, the squelch more reliable, the construction more rugged,
and has fewer internally generated spurs on HF. They both have band switching
relays which chatter if you scan a mixture of frequencies across certain band boundaries.

I don't know if a pcr-1000 will work or not with an old dos version of Scancat, but I do know that from the pcr-1000 point of view, it doesn't have a 'hex address'. It connects to any serial port, and the address of whatever serial port you plug it into is between you and your computer -- it has nothing to do with the pcr-1000 itself.

Let me suggest you check http://www.gcn.ou.edu/~jahern/home/pcr1000/ [not my site] for the full range of pcr-1000 resources, including dos programs capable of controling the 1000.

Trade for a laptop? What kind of laptop would you get for $200?

3480. Optolinx data slicer

Newsgroup: rec.radio.scanner
Date: 2000-02-05 00:00:00 UTC
From: John Porter <oceans1@nccoast.net>
Message-ID: <q85n4.917$6w1.34585@reader1.interactive.net>
Source record: 94586

Anyone have any experience with the Optolinx inetrface? I am trying to use the data slicer for some decoding but it does not seem to work with anything.
Is the audio in to the optolinx a stereo or mono?

Thanks!

John Porter

3481. New Nashville, Tn System

Newsgroup: rec.radio.scanner

The more important question for you Kevin, is what exactly do YOU
contribute? I mean besides snotty, unknowing little remarks about people you
obviously don't know anything about whatsoever.
Enlighten all of us on where you post YOUR expert, far more detailed reviews
of radios - I've missed your exceptional work somehow and don't want to
suffer another day in dark ignorance.

Certianly you are entitled to your own opinon, but when you post completely
baseless drivel about somebody who has spent hundreds and hundreds of hours
(at least) contributing to this hobby, and then you defend your previous
stupidity with some half-assed claim that you were 'joking' and that
'Rich-sometime-gets-free-stuff-so-he-must-be-owned-by-the-man' goofiness,
then I am welcome to my opinion of you, eh?

And my favorite comment - "Quite frankly his reviews are not great, but I
wouldn't hold that against him."

So PLEASE - I BEG you - tell us where your own work on the subject is?
Better yet, send me one of your reviews and I'll immediatey expand my
business to include the monthly "Kevin Expert Radio Guide" publication.
Think of it - we'll be rich! (no pun..) Think of the radios that
manufacturers worldwide will just give away to you and I - just for your
wisdom and peerless genius on scanning.
And I'll only take %65 off the top...

John Porter

Winflex is basically the ONLY free windows decoder that does flex now, you will only require 4-level for the fastest ones, i often get great results though sometimes up to 6400 flex with a 2-level interface.

www.eavsdropper.dabsol.co.uk

the home of winflex.

Does anyone have experience with the AOR SDU5500 spectrum analyzer? Would like opinion/comparison with other such units (AVCOM?) for use with AR5000+3. At least one previous message on Usenet gave the SDU5500 a 'thumbs down' and said it was a real dog and basically a waste of money. The SDU5500 review in the December 1999 Shortwave Magazine was generally positive, but mostly dealt with specs and how to use the unit rather than with critical performance issues. I would really appreciate some user feedback on the SDU5500. Have already done a web search and AR5000 mail list query and have seen what's currently posted. Am looking for new data.
Thanks,
Hank

Hi, I've been lurking in these newsgroups for several months. I don't have a scanner yet but it's still interesting. Here is my problem. I have a cable modem (uses the TV cable/coax) and to make a long story short, I had to use 50ohm cable from the feed into the house to the modem. I know that for transmitters, the ohm ratting is important. Do you think this may be why my internet connection has gone south (bad packet loss, higher pings, lower transfer rates)?

I'm sorry this is off topic but it dose seem to me that many of you would be more qualified than I to answer this.

Thanks, that's very helpful. You know, it seems like this would be a handy sort of option for anyone, blind or not. With simple speech synthesis being dirt cheap these days I'm a little surprised that someone doesn't make this a standard feature, and add the channel/bank, too.

I also have a AR5000+3 and I have was going to buy the sdu5500 but heard too much negative about it. but at the end of the day if you want a "real" spec-an you will need to look at around 1500-4000 pounds for the "real deal". I have no doubt that there are some good "home brews" about usingf oscilliscopes etc but for the money i suppose the sdu isn't all that bad.

depends on how fussy you are?.

Thanks for the link Greg.
It looks like the radio jack is not a standard "earphone" jack. So I imagine
it must be difficult to find the compatible 4 conductor plug. B.T.W., that link
does have nice software for programming many rigs, as well as
the R2.

Yes, that is the problem. Cable modems use 64bit QAM -- cable tv/modem is 75 ohms and splicing in a 50ohm section causes SWR.. the cable modem has little tolerance for reflected energy as it distorts the waveform and causes errors (QAM is a phase coherent and amplitude sensitive modulation).

dump the 50ohm and properly connect RG-6. You probably haven't noticed, but you did screw up your tv reception as well.

live and learn -- good to experiment -- best to learn from the mistakes.

It is interesting to hear what the police and fire departments are up to in your local town.
National weather broadcasts are also handy.

Does it become boring from time
>to time?
If so, you can listen to your neighbor's wireless telephones :-).

What have you done to keep it
>interesting?
Try different things. Listen to the aircraft band and see what your local airport is up to. See if your cable tv has leakage. Listen to amateur radio operators, railroads, tv local relay broadcasts, your work site security. I also listen to the operations channel at Yankee
stadium while I visit. A wideband scanner can also hear broadcast AM. FM, and shortwave.

It intrigues me but I'm not sure if
>just listening is all that exciting. I guess it
>depends on what you hear. I don't have a scanner
>and hardly know a thing about it. So, enlighten

Check out the complete review at:
http://www.strongsignals.net/htm/revx10.htm

This is my first scanner which I bought about a week ago. The above
review explained a huge amount about using the DJ-X10. The manual is
accurate, but terse.

The battery problem on this unit is pretty bad, although I cannot
compare it to other radios since I have no other experience. I bought
an AC/DC converter from Radio Shack tonight, and plan on purchasing
the dry cell pack so I can rotate standard AA batteries when using the
radio away from my desk.

The radio is often for sale on Ebay, sometimes "new." I checked
tonight and there is a "new" one currently listed at $207. The
"cell-blocked" U.S. version is going to be much cheaper than the
European or Canadian versions for U.S. buyers since the unblocked
radio is illegal to use within the U.S. or import into the U.S.-- but
apparently not illegal to buy or sell, at least as far as I can tell
from reading the few FCC regulations I can find on it..

1. Your cable-modem is a transmitter.
2. The 50 ohm cable you indicate you used is likely causing signal leakage & high
swr at the cable modem transmitter.

Therefore, you should put in the coax AND connectors that are required.

If a job isn't worth doing right, then it isn't worth doing.

3535. FREE BC245xlt control software

Newsgroup: rec.radio.scanner
Date: 2000-02-06 00:00:00 UTC
From: "Jeff Bishop, N8WB" <n8wb@nospam_juno.com>
Message-ID: <sPen4.2152$sN.108674@typhoon1.rdc-detw.rr.com>
Source record: 94473

There is an updated version of Alain's FREE control software for the BC245xlt. You can download the software at http://www.iquebec.com/senss/. This new version has a new look as well as a keypad that looks and acts just like the one that is on the 245.
There is also an ICQ ActiveList that you can join that covers both the BC245xlt as well as the free software that is available. One advantage to the list is that you can see other users that are online and talk with them in real time. So if you have a question about the scanner or the software, you have the ability to get online help from other members of the group. If you do not have ICQ, you can download it for free at www.icq.com. Once you get ICQ up and running, the ActiveList that you will want to join is # 54109742.

Happy Scanning,

Jeff, n8wb

Yet another example where the ill advice to use mismatched feedline could
degrade or make usesless a communications setup.
This my CAL's dudes is why you should use the correct impedance in any
transmission situation.

I would think that a windows interface would be better, especially since many computers have lots of memory now. With DOS you are limited to 640kb. Probe works OK in DOS but you need to be stingy with memory use if you really plan on a DOS program.

Message-ID: <z2kn4.18918$T82.103353@typhoon3.tampabay.rr.com>
Source record: 94492

Hi,

I've had one of these little radios for a couple of years, and despite the limitations that are often pointed out, I love this little thing!

Anyway, it seems that it should be possible to trunk track with one of these with a software controller for the radio. You could pass the audio output into a sound card, say, and use the control bus to program the radio. It would be like one of those Optoelectronics boxes that monitor the band and then program the radio.

Anyone ever heard of such software for the Icom R-10??

Thanks,
Bob

BTW. For reasons that aren't completely clear to me, my newsreader is finding an old address for me in the reply-to field, despite the configuration being correct. If you'd like to email me, the address is

blombardi@REMOVETHIS.cfl.rr.com

- with the obvious part removed (including the first . after the @).

3560. Downtown San Diego PD freq

Newsgroup: rec.radio.scanner
Date: 2000-02-06 00:00:00 UTC
From: Ken Diaz <kenjd@email.msn.com>
Message-ID: <#uS3KXOc$GA.247@cpmsnbbsa03>
Source record: 94498

For years 159.045 was used for downtown "central"
activity. When moved to trunk, they continued the
"simulcast" on this frequency for a year or so.
It now appears gone.
Anyone know of a single reliable freq. for downtown area
(800 MHz or otherwise)?
I have a list of the new 800 MHz San Diego trunks.
With a trunktracker, can I receive "central" consistently?
Thanks, Ken, WDX9MWL.

Yes. The DS49-CU1 works much better. It's guaranteed to descramble standard frequency inversion schemes used in new cordless telephones as well as some public service/industrial communication systems. It also descrambles variable split band frequency inversion schemes! The DS49 descrambles all standard schemes using 3300, 3500, and 3750 HZ plus speech inversion using non standard pilot tones! It is adjustable from 2.4 to 4.7 KHZ.
The Ramsey unit is not adjustable.

Looking to purchase a new/used scanner. I have a limit of five hundred dollars to spend. Interested in trunk tracking capability. What is the "best" available, considering features and reliability versus price? Not tryin' to start a flame war, just wanna get the most for my money. By the way I have a Uniden Bearcat BC140 that has low audio output even when the volume is fully clockwise - have checked the speaker - works great with other audio source. Any fixes would be greatly appreciated. Please respond via e-mail outside of the rec.radio.scanner newsgroup, I don't frequent the others on a regular basis.

I was wondering why I can't find a good handheld that will also pick up AM and FM stations, this would be a nice feature at sporting events. Also is there anyway to modify a scanner to broadcast on the frequency it is on, say for example the SC150. It would be fun at the races talking to the drivers....Or cut in on a phone conversation

The second "ring" terminal is not used on the R2. A standard 3-circuit
phone plug is all you need for programming the R2.

The Q7, on the other hand, does use the second ring.

Heres a simpler answer....get a cheap scanner to start with and find all the best stuff yourself by sitting around for hours tuning like us dedicated loons ;-~).

But then again if you ask that question in the first place then it sounds like possibly the hobby is not for you in the first place ?.

Bucks County, PA (northern suburbs of Phila) has already switched all but a few of the southern most police zones over to the Astro digital trunk system on the old 501 mhz freqs. The Zone 4 freq, 501.2375, has been digital for a few weeks now (this is what you refer to as sounding like data). Newtown, Bristol, Falls and Bensalem have not been switched over yet.

There is currently not a consumer grade scanner available for reception of this new digital system.

Mambo Kid wrote:
> Not coincidentally, Percon is now one of his first advertisers.

For the record, PerCon paid not a cent for that "ad"...which is
actually a link to a free service they provide for the hobby
community. So no PerCon money for advertising is lining my
pockets as you so kindly imply. Of course you would not know this
because you speak from ignorance born out of supposition.

> How about those special dealer mentions that he posts so prominently?
> All of them have either given or lent him products. That's all it
> takes to be recognized, I guess.

If it were not for these dealers, many of the reviews at my site
would not be possible. Since I see no money nor words of wisdom
nor time and effort coming from you to help with the review of
equipment for others to benefit from, I have to rely on someone.
These dealers take an active interest in the hobby and provide
not only radios for review but also the timely and trusted news
items my site is noted for. That is why they are recognized...
and why you are not.

> I strongly advocate that Rich should get paid for his efforts--and
> I'm surprised that it has taken him so long to make the transition
> from a public to a paid service.

Since when has ANYONE had to pay to use my site? Let me offer up an
answer for you...NEVER! Now you've gone from ignorance and supposition
to outright lying.

> However, I am equally adamant that he doesn't pass off
> the info on his site as an unbiased public service when he's
> getting freebies and such.

Your powers of deduction are simply astounding. I am loaned a
radio to evaluate and that makes my views biased? Why don't
you actually read some of my reviews, like the AR16, and see
how I hide the truth in presenting my biased opinions.

Better yet, why don't you go read my Guest Book or Accolades
which contain HUNDREDS of unsolicited and unedited opinions
of my readers who graciously wrote me to tell how much they
they enjoyed using my site to help them pick the radio that
was just right for them. Since these hobbyists are happy
and help to increase the hobby ranks then I guess we need
more biased reviewing out there.

> In any case, more power to him for all of his hard work.

Funny...your opinions don't come off that way. You state that I
am asking for payment from my site readers when I'm not, you
imply that I'm getting paid behind everyone's back to supply
biased information. Yeah, it's easy tell you're a supporter of
my 'hard work.' With friends like you...

I'll tell you one thing "pal," my biases towards radios and such
are a heck of a lot less than the biases and grudges you're
holding against me for whatever petty reasons. I don't know what
I could have done to make you so paranoid and suspicious, but I
sure would like to. Or do you just like to see conspiracies and
cover ups everywhere?

> Just don't put lipstick on this pig and say that it's pretty--it ain't.
> Not until there is an admission that this is a commercial site that is
> passing itself off as a "public service."

I won't even comment on this useless drivel.

Let's keep a few points in mind.

1.) Almost all review models of anything that is reviewed or tested in most print magazines is loaned, or provided for free, by the distributor or manufacturer. Do you think Motor Trend BUYS all those 200 MPH cars to test them? Or ZDnet buys all those computers to test?

2.) Not all of Strongsignals reviews are favorable. Read them.

3.) Rich provides mountains of online space for user opinions. Want to see MANY views of the same radio? Look up the user opinions of the AR8200! If your experience with a product doesn't agree with others, write it up and send it in!

gosh, i was not aware we were at War with anyone, officially.

this Sharpton goofus, well, you go to the bottom of the
litter with this asshole. poor bill.

Based on doctor's prognosis should not Bill be deceased by now?

interesting why no one has charged the major with practicing
religion while mayor. thought that was separate. vis a vis
the Art Musuem flaK; this idiot labels blasphemous the
characterization of some stupid imaginary virgin M depicted
in visual form not to his liking.

Here this asshole wants these art-works thrown out becuase
he proclaims they insult his concept of being god on this earth.
Actually saying the words too: this is blasphemous against
Chriatianity
bit, and more yada yada doo dung.

here we have some crony who is major acting as if he's been put up
on the altar to defend some stupid character found in some
concocted
story book preceived by him as Real. Some guy. Acting as if the
bible
or what-not stories are real and that people must go to jail
because they
did not check with him before they made the Virgin Mary out to be
such
visually correct.

and now we are being told we are at War with some country who we
cannot
name, but when they come up with one, they will tell us as soon as
they
can. In the mean time Cheeks is a criminal for which they have no
justifucation

treating as they are.

To Listen Is A Crime in NYC that which some off-center major deems his word that must be obeyed or else.

bill conduit
as i see it

My current favorite is the OptoCom. (I have 2) This dandy radio (if you have the later version with the Bit-Banger mod) will follow EDACS, Moto, and LTR trunking with Scan-Star, E-Trax, and TrunkTrac. Conventional scanning can be done with Probe (DOS) and Wave (Mac).

It is similar to the PRO-2042 with the OS535 board except it has no display or keyboard, and later versions have the BitBanger which allows more features to be used.

I also have an OS456 which is a great deal if you have a 2005 or 2006 (and can find an OS456, since they are discontinued). Only works in trunking using TrunkTrac, but is great in conventional modes.

I also have a BC245XLT. While this does a fine job trunking alone, with TrunkTrac 7.0 it is even better! This allows logging and system info on Moto trunked systems.

Dan,
Try percon.com .
They have an online search. You can search for all types of frecquencies
in any town in the USA.
You will have to click on a few links to get to the search page though.
I find printing the page(s) in landscape works best.
If you want , feel free to contact me and I'll look for the whole url to
the search page, and send it to you.
If the FCC lisenced the frecquency, ... it should be on the list at
percon.

Everyone,

The Trunker development team is pleased to announce the general availability of Trunker/Etrunker ver 3.8.1.

These latest versions of trunker/etrunker can be downloaded from the following site:

http://www.lcblanton.com/digital.htm

PLEASE READ THE DOCUMENTATION associated with each of the distributions for a listing of the new features and how to use them.

Warmest regards,

Lindsay Blanton

Well, why ain't that crossposting great!

Ehm, webcamsue.nl sounds like: "I've got an porn site and want to make
money", if that's the case, their'll be an abuse mail going out for an
off-topic posting.

Hello, I have a PRO-2026 for sale. It is Model # 200-148A with manual,
AC
Adapter and a BRAND new mounting bracket/hardware package from Radio
Shack.
The scanner was modified by a professional technician and it does
receive
the full cell band, it is in like new condition, never mobile. I am
asking
$ 200.00, prepaid by postal money order, shipped CONUS by UPS.

Didn't say if you wanbted Handheld or Desktop. The choices are
somewhat limited. Fro a Handheld Trunker you can look at het
Uniden 245 XLT or the Radio Shack Pro-92
In a desk top right now it is limited to the Radio Shack
Pro-2052.
It is roumored that Uniden is coming out wity a repalcement for
their BC 895XLT so you might want to wait a while if interested
in a Teble top scanner.

That's why there is almost 4 MILLION items for sell on there now!
That's why eBays stock has doubled every year!
That's why your seeing so many FA's in this newsgroup.

Face it, eBay is here to stay. I'll admit, people get great prices for electronics. I have sold and bought from eBay.
I have yet to have one person bitch because they felt they paid to much for an item. All I see is the people who want something for nothing crying in the newsgroups. No body twists your arm to look at the FA items. Most up to date newsreaders have filters! Hell, mine has several in it (macky, cheek, ect...) I don't see the things I don't like.
Its not got anything to do with a "conscience". You bid what your willing to pay. If your not willing to pay then don't bid. Simple isn't it. Why can't you get a grip on that. People like you are jealous because they can't get it at a steal of a deal.
I'm getting ready to put a PRO-43 on there tonight. Its not because I want to get the top dollar. Its because there are lowlifes in the newsgroups who say they want it and the money is in the mail only to find out two weeks later they changed their mind and never sent it. eBay has that little extra security that makes a difference. I can see feedback on the bidder. If he/she has negative feedback I can cancel their bid (and I do) I want to sell my equipment and buy equipment the safest way possible without getting blistered from someone like WB4IVG who just took me for $95 on this newsgroup. It seems I'm not the only one he took. I have been burnt twice now on this newsgroup and I promise it won't happen again! You would think that a fellow ham would have some morals but I have found out that in this day and time you can't trust to many people when dealing with money.

Dan B
One happy eBay user!

New radio control software integrates Motorola trunk monitoring into
conventional scanning.

http://www.micosyen.com/radio.htm

Features:

- Auto determination of main radio type.
- Auto determination of trunk radio type.
- CTCSS support with CTCSS search.
- DTMF decoder support.
- IR remote (not available during trunk).
- Temporary lockout.
- Written in assembly--does trunk decoding on a 386-20.
- Accepts trunk bitstream on DSR or CTS.

This a much expanded version of PCR.COM that now supports PCR1000,
R9000, AR8000 & AR3000A. AR8200, R8500, AR5000, BC895, BC245, Optocom &
?? will soon be added.

Currently, only 800 MHz Motorola trunk decoding is supported. 900 MHz,
400 MHz and EDACS will soon be added.

Beta testers needed. Get your copy now, while it's still free. Direct
comments and questions to the e-mail address on the website.

3602. 800-band/trunking "Problems List"

Newsgroup: rec.radio.scanner
Date: 2000-02-07 00:00:00 UTC

We have set up an email list called "800band"...

To discuss and explore the many reports of shortcomings, dead-spot problems, failures, cost-overruns and abandonments of 800-band trunking radio systems in PUBLIC SAFETY applications.

Having no particular axe to grind, we also welcome responses from manufacturers, dealers and users. Our concern is not to INFLAME, but rather to provide information for potential 800-band and trunking-system buyers. In that light, we welcome neither "flaming" nor advertising.

Anecdotal reports are welcome, but we would especially like to see references to real documentation of such problems.

We are not associated in any way with any radio manufacturer or dealer, and simply intend to make this list a "one-stop" source of information on these alleged problems. Our primary concern is for the end user: police officers, firefighters, dispatchers, EMTs etc, and ultimately the public at large, who rely on dependable radio communications at all times.

To subscribe, go to:
http://www.onelist.com/community/800band or
send a blank email to: 800band-subscribe@onelist.com

Radio Hackers Interfering With Police Call

Technology: In a growing problem, pranksters on law enforcement frequencies have broadcast bogus emergency calls and rants.

By JACK LEONARD, Times Staff Writer

Emboldened by new technology, hackers are invading police emergency networks with increasing frequency, confusing officers across Southern California with hundreds of rogue broadcasts last year that wasted police time and in extreme cases delayed responses to emergencies.
Such security breaches, which a few years ago occurred only a handful of times a year, are becoming a common problem that affects one local agency or another almost daily.
Police channels were once "sacred ground. . . . But with new technology, that's not the case," said Santa Ana Police Sgt. Raul Luna. "We're much more vulnerable."
Although it might seem like the harmless work of a few pranksters, police say the security breaches have serious consequences. Consider:
* In one of the most serious cases in recent months, a hacker interfered with a California Highway Patrol pursuit of a tagger in Los Angeles' Chinatown. The rogue broadcast delayed officers' calls for backup. By the time police units arrived, the tagger had slipped away.
"It definitely interrupted the pursuit," said CHP Det. David Flores, adding that future transmissions could have more serious consequences. "An officer could be out there with something overwhelming happening, and he cannot get on the air. It could cost somebody their life."
An investigation into the incident led CHP investigators to arrest 63-year-old Bell businessman Jack Gerritsen. He is also the subject of an investigation by Orange County sheriff's officials into more than 100 breaches of their radio channels over the last year.
* A burping hacker--dubbed "the phantom"--regularly breaks into the Huntington Beach band, sometimes masquerading as an officer under attack. The hoax broadcasts have thrown staff into a panic and forced them to make hurried checks on patrol units to ensure none are in danger.
* Last summer, a hacker posing as a Brea police officer warned of shots fired near City Hall, prompting police to evacuate portions of the civic center and seal off surrounding streets as they combed the area for a possible gunman.
* Santa Ana officials alerted officers last month to a singer belting out gangsta rap lyrics over the city's police channel. The transmission prevented officers from calling in their positions for more than a minute until the song had finished.
Officials blame the increase in hackers on the growing availability of cheap high-tech radios. Swap meets and private sellers offer gadgets for as

little as $300 that can be modified to transmit on police channels.
"I think it's becoming more prevalent because you're getting more people out there who like to mess around with radios," Flores said. "And the technology has become more sophisticated."
Other hackers are opportunists who manage to get their hands on a police officer's hand-held radio.
"An officer will leave their radio lying inside their car, and someone will snap it up," said Long Beach Police Sgt. Steve Filippini. "Usually they can use it for a few days and the battery will go dead."
Police agencies, officials said, are virtually helpless when their radio channels are invaded because some current networks lack the security features of newer ones. Overriding the messages, they said, is impossible without cutting off some officers' access to the frequency. Officers who try to talk over the hackers only broadcast garbled messages.
Catching hackers is notoriously difficult. Law enforcement officials must be prepared to track the transmission when it begins if they hope to pinpoint the source. Even when caught, suspects face misdemeanor charges, bringing a fine and a maximum jail term of a year.
Orange County agencies are spending millions of dollars on a new radio system that will--among other features--encrypt police frequencies and better protect channels from invasion. Irvine and Tustin police are scheduled to start using the system this month, with the rest of the county joining by year's end.
The new technology will allow agencies to determine whether prank broadcasts were made by police radios or outsiders. But law enforcement officials said they believe the system will provide a respite rather than a cure.
"Technology will eventually come on line so that hackers will be able to figure out how to interfere again," said Orange County Sheriff's Capt. Joe Davis.
Los Angeles County has no immediate plans to install such safeguards.

Pranks Pose Potential for Substantial Harm
So far, local officers said they have been lucky; no one has been hurt because of prank interference. But interruptions make it difficult for police officers to communicate with each other or with headquarters.
Officials said it's only a matter of time until a security breach occurs at the wrong moment, putting officers or the public in harm's way.
There have been close calls.
The Chinatown incident occurred last November as CHP officers were staking out an area around the Pasadena Freeway that has been repeatedly hit by taggers.
About 7:30 p.m., officers noticed a tagger spraying the wall and began pursuing him by car and foot. Just as officers were about to broadcast instructions to set up a perimeter around the area, the hacker breached their frequency and began a 20-second rant against the LAPD Rampart Division.
"It was so frustrating that this guy was interfering," said the CHP's Flores. "We were trying to catch this guy."
By the time the radio became free again, it was too late, Flores said.

Officers arrived at their perimeter positions, but the suspect had slipped through.
In Northern California, CHP dispatchers in December heard a plea for help from someone claiming to be a police officer. The voice said a fellow officer was injured and near death at a location near Fresno.
Officials dispatched officers from various agencies and sent a helicopter and airplane to scour the area, but concluded after hours of hunting that the call was a hoax.
The same hacker is believed to be responsible for fake calls of officers injured and shots fired in Berkeley, Richmond, Oakland and Vallejo, said Richmond Police Sgt. Mike Walter.
Police departments from Oregon to Florida report similar problems.
"My impression is that it's going on all over the country," said Alan Burton, a Benicia, Calif.-based consultant on 911 systems. "The thing has been a continuing problem."
Burton said the digitalization of radio systems could help, but he doubts it will completely keep hackers off the airwaves.
"Even then, I'm not sure we ever will," he said. "There are guys who stay up all night trying to hack into whatever they can, police radios, the Pentagon."
Police in Huntington Beach have for five years listened to "the phantom," who interferes with the agency's radio band two or three times a month, said Lt. Chuck Thomas.
"He'll burp, he'll make noises like he's going to the bathroom," Thomas said. "It's disruptive. We've had him come on the radio and say, 'Shots fired.' That perks everyone up."

Mimicking Police Distress Calls
The phantom has even pretended to be a police officer in distress, sending other officers into a panicked hunt for their colleague in trouble, Thomas said.
"This happens fairly regularly to us," he said. "We've instructed people to completely ignore him. He wants us to react. Maybe he gets a kick out of us reacting."
Often, hackers' primary motive appears to be crude.
Police officers in Santa Ana last month were forced to listen to a rap song from another hacker whose profanity-filled lyrics assailed officers, said Sgt. Luna. Under such verbal assaults, some officers try to use their radios to order hackers to stop broadcasting, but the tactic rarely works.
Luna heard one 60-second rant in which the hacker sang profanity-laden rap songs attacking Santa Ana officers.
"I was stunned," he said. "He was so forthright and brazen with his comments. . . . It's almost like he's got a personal vendetta."
In the case of the Bell businessman arrested last year on suspicion of hacking, personal experience played a key role. Gerritsen said in an interview that he played the recording on thousands of occasions over numerous radio bands, some of which were probably used by police. He said he was once the victim of police brutality, and argued that broadcasting his message condemning the LAPD's Rampart Division should be protected by free speech rights.

He said his intention was to protest police misconduct, not to interfere with police work.
Police accuse him of going on a rampage, hitting police in Beverly Hills, Long Beach, Maywood, Garden Grove and the Orange County Sheriff's Department with a barrage of transmissions. The recording attacked police officers, particularly the Rampart Division, where some gang officers are being investigated for alleged corruption.
For more than a month, prerecorded messages came over the airwaves. Sometimes, the messages were repeated again and again. Orange County sheriff's officials logged 133 broadcasts of the message in just over a month before they stopped counting.
Alarmed by the extent of the problem, CHP detectives teamed up with investigators from the Federal Communications Commission to trace the transmissions' source. They began a painstaking probe, using high-tech equipment. Investigators eventually made their way to a currency exchange shop in Bell.
The CHP's Flores said that on Dec. 28, he and other investigators watched as Gerritsen left the business, walked to the parking lot and activated a pocket-sized radio. They listened, Flores said, as he made an identical broadcast.
He was booked on suspicion of disrupting public safety communications.
The Los Angeles County district attorney's office is reviewing the case.
Orange County sheriff's investigators said he also could face prosecution in Orange County.

I have one of these too, and it does that maybe once every 2-3 days
maybe one time for a second or 2. This is only a guess but I suspect it
might be
the data channel freq. changes and mometarily confuses the radio. Just a
guess.

Jeff

This is a warning to the newsgroups.....
I answered a "wanted to trade" message from David
Munroe. He wanted to trade a PRO-2026 scanner for a PCI Video Card. We
e-mailed back and forth and I finally agreed to send him a brand new in
the box, (excellent grade), PCI video card for his PRO-2026 scanner. I
shipped the card and he never shipped the scanner.

He uses the email address doc@mailtag.com, but we suspect other e-mail
addresses from mailtag.com, such as radio456@mailtag.com.

This thief also deals on E-Bay using radio456@mailtag.com

He gives a shipping address as:

Dave Munroe
R.R. #2 Keene
Ontario, Canada
K0L-2G0 (should be K0L2G0)

phone: (705) 295-4688

His other aliases are "Doc", "Quaker", David Munroe, Dave Munro and
possibly David Stelman or Spelman.

I am sending this warning to all the newsgroups David Munroe has been
advertising on. DO NOT DEAL IN ANY WAY, SHAPE OR FORM WITH THIS GUY. Be
careful of possible other aliases and e-mail addresses.

Hola amigos, estoy buscando alg&#65533;n programa siminar a Wintone, para usarlo con la tarjeta de sonido. Este programa no me funciona bajo W98, por lo que estoy buscando otro similar.
Para daros una idea, este programa arranca a grabar en cuanto recibe una se&#65533;al de audio, a la vez que descifra si es un tono DTMF CTSS, SUBTONOS, ETC.
Si sabeis de alguno, ruego que me lo comuniqueis.
Gracias por todo y un saludo.

Are you looking for a fresh modern look to your Control Software, with lots of functions for the Amateur Radio, and SWL operator.....Have a look at the features below;

- Frequency operation covering from 0 KHz to 999,999.999 KHz
- All Modes including the Reverse functions for CW and FSK
- All Tones as per the TS570 operation
- Main fine tuning with 10 Hz steps
- Selectable coarse tuning with steps of 100 Hz, 1 KHz, 5 KHz, 10 Khz, 0.5 MHz and 1 MHz. (Additional steps can be provided, depending upon the demand)
- Tuning knob with Fine and Coarse Tuning. The Fine tuning provides approx. 1.2 Khz per revolution and the Coarse tuning at approx. 8.5 Khz per revolution.
- Standard Memory switching, as appearing in the Radio
- Band switching is provided by way of an additional screen. User definable with 50 selectable frequencies and Mode
- Manual entry of a frequency is provided
- Quick Memo operation using 5 Memories
- Flock operation
- Frequency Scanning operation. 50 user definable ranges are available, that include the Mode, Frequency Step and Pause time. Includes a description of each range
- NR1/2 Noise reduction operation
- BC Beat Cancel
- 300 memories are available where the first 100 are used for downloading and uploading the Radio's memories. All memories have Split operation as well as Mode, Tone and Description. Memory scanning is available based on a code against each memory, and/or by limiting the memory locations to be scanned. Additional functions include; current VFO to current memory location, and current memory location to VFO A/B. The Radio memory locations can be transferred to the program and vice versa, modified, and then re-loaded back to the Radio - Standard VFO A/B/Memory selection, with A=B, B=A and current memory displayed transferred to VFO A
- Split Frequency Operation with TF-Set
- RIT/XIT operation with the appropriate frequency display
- Volume, RF, DSP High and Low, and IF Shift front panel controls. IF - shift displays the frequency
- CW Auto tune function
- Filter display, showing the setting, depending upon the mode in operation
- Power, Microphone Gain, Keyer Speed And Delay, VOX Gain, and Squelch Level are adjustable using a slider control on a separate function

screen
- Antenna selection, AGC, Tone and the Channel selections are also available from the same separate function screen
- Power Switch, Attenuator, Pre-Amplifier, VOX, Speech Processor, Send Function and Antenna Tuner are all operational
- S Meter function
- Local as well as GMT, Date and Time is displayed on the front panel
- Not necessary to have the Radio connected, in order to have the basic set-up functions available, e.g. Scanning, Band and Memories
- Logging Function that allows Local and GMT Date and Time recording. The Frequency and Mode can also be transferred from the current VFO. The Call Sign and Description can also be recorded. This is an unlimited database with sorting available on each column
- Communication speeds from 110 Baud to 256 Kbaud (57,600 Baud is the max for the TS570)
- Up to 16 Com Port Selections

Program has been fully tested, and runs under Windows 95, 98 and NT

This program was written based on the Kenwood TS 570, but it will work on other Kenwood models...

If you would like to download it, you can find it at my home page address below;

http://web.one.net.au/~kjbutler/page2.html

Please let me know what you think of it, and if you would like any changes made, or additional functions.

I have a few ideas in the pipeline to further increase the functionality.

Actually, if you're going to be pedantic, it should be "K0L 2GO"

> phone: (705) 295-4688

There is a phone book listing for
MUNRO, G
220 PAUDASH RD
KEENE, ON
(705) 295-4688

So it seems the information he gave you is correct (to the extent that
there is a Monro with that phone number in that town). Have you tried
calling the number? Maybe you can talk to whoever "G" is -- with any
luck it's a parent or guardian in a position to help you settle the
matter.

Gee Rich, for someone who won't even comment on "this useless drivel" you sure had a boatload to say. A lot of it supposition on top of supposition, which
apparently gets your knickers in a knot. Let's see I can't suppose, but you can. Thanks for giving me the rule book.

The fact is that you want it both ways: You wish to act like a public service and get paid for it too. Sorry "pal" as you said to me, you're engaging in a bit of hypocrisy and you should go put some clothes on.

I said, and will re-iterate, that your Web site is second to none. But to say that you are now doing it as a public service, while at the same time you are soliciting advertising, is sheer bullshit.

Okay, I agree with your points, but only partly.

Major magazines like Motor Trend do not pay for all of their test cars, but at the same time, they can claim to adhere to certain journalistic standards (i.e. they say they are not biased in any way and most of the time most people believe them). Further, they return the auto after the review--or at least not those kept for long-term review. Rich apparently keeps the stuff that he gets, so in a sense he is being "paid" with a product to do the review.

Legitimate news organizations do not keep the products they are asked to evaluate. Nor do they accept favors like software that they don't intend to evaluate. I don't have any knowledge of Rich's practices in this regard. My point is that if he wishes to pass himself off as a legitimate news source (and based on having "news" on his home page, it would seem so) then he should adhere to the same standards as other news outlets.

However, if he wishes to be the Rich Wells get-what-I-can-and-give my-opinion-one-way-or-the-other Web site, then in fairness he should provide some statement of disclosure so the reader can put his remarks in context. What's wrong with that? To say: "I'm reviewing this product; and by the way, it's a freebie." Isn't that merely being complete and fair to his audience? I don't understand why he objects so strongly to being open about his standards for reviews.

Rich wants to be taken seriously as an objective reporter of the scanning community. Then, he shouldn't mind when people ask him to state his level of objectivity. His protestations are either disingenuous or he is merely naive about the import of his Web site.

My 4 level fsk will be done next week, in the mean time, I have been playing with my 2 level fsk. I have not decoded anything at all with it yet, but I have verified that it is working and connected to the computer properly. Could anyone give me any info about what I can decode with a 2 fsk, and what frequencies to search on? I already have pager decoding software which I have been trying to use to get used to the concept, but nothing so far. Any help would be appreciated. Also, some websites (other than eavesdroppers) would be nice too.

Just post reply to newsgroup, I check here about twice per day.

Thanks in advance.

Oh, please Great Gonzo, point me to some of your great works and contributions to the grand art of scanning. You ^%$# hypocrite. Sit on your thumn and pontificate, while I put yet another loudmouth in my kill fill along with that Mackey and the rest of those butt-head clowns. You're in good company, I'm sure.

Well, you guys must have had a very simple exercise to warrant
the use of FRS radios.

>Cost-effective?

Less expensive than GMRS. Do you know how expensive military radios are
by chance? :)

>Any excuse at all?

You don't ask questions, you respond to them.

NOW you tell me! I just ordered an 895 tonite from Grove!

NOTE:
I also ordered one two weeks ago from QVC but they shipped it to someone in California even though I live near Boston. They can't send me another because that was the last one they had, but they did agree (after some prodding) to take it off my bill. So someone in CA got a BC895xlt for free! Why don't those things ever happen to me?
Brian Denley

if you want one tomorrow, try the handheld BC 245XLT, a trunktracker II. If you can wait a bit, the mobile/ desktop BC 870XLT (a T3) is due out this Spring/Summer. A good current desktop model is the BC895XLT, a T2.

no matter which model you get, you'll want to upgrade the antenna, my suggestion is a Diamond RH77CA, a whip antenna, comparable to the Radio Shack telescoping antenna (I think it outperforms the Shack ant), and easier on the BNC connection if it gets bounced around.

check www.strongsignals.net for more complete descriptions of these Unidens, and comparisons to, and descriptions of, the equivalent Radio Shack models.

I started reading about scanners online recently and found it interesting. Did some research today online. I thought about buying a scanner and was wondering which I should get. I'd like to spend anywhere from 200-250. The IC-R2 caught my attention, but as the review on Strong Signals says, it may not work well above 800Mhz. I live in NYC. Since this is a popular scanner, has anyone used it in a populated area? What are the results? Are there any other scanners that are good in that price range? I intend to use it to listen in to JFK's ATC and aircraft mostly, but would prefer a scanner with a wide range anyway. I dont care much for features (e.g: backlit display/ very fast search). Just good reception and wide range. Thank you.

Shoe

Hey there,

I've got myself a 100 channel programmable and pretty much have all the freqs. I'm interested, except for my home town fire Dept freq. I've looked in books and web sites and gotten quite a few and tried them all. The only three I pick up anything on are : 483.4625, 483.6375, 46.42.
On the first one I'll sometimes pick up what sounds like Salem, but just like the other two it's usually a Boston FD station. Anyone have the actual freq? or know why I"m picking up boston on what is supposed to be Salem?

Help would be appreciated

The real irony is that on 'Peoples Court' they had a black guy get his
bicycle stolen on a thursday nite in front of a video store by another
black guy that he knows. Further questioning by the judge reveals our
suspect has prior arrests for possesion of burglary tools.

As we come back from commercial we get Harvey Levin at the mall asking what the people in front to the camera think. He asks a black girl about 17years old and she says its the victims fault because the owner left the bike unlocked!!!
Why, that liquor store owner was just beggin' to get robbed!

Scanning helps you cover your & your familys arse. Cops are only reactive NOT proactive.

Do not worry about the band plan to much.

That is easily overcome by programming manually.

Take note of all the AOR 8200 models that are regularly put up for sale.

My 9000M3 is no doubt the best available with the 7100 aerial, the ducky one is so deaf as to be not funny.

Can send you some personal reports on the 7100/9000M3 if you e-mail me direct.

Reminds me of my PRC-6 I got to work 6m simplex. 250mW??? Come on! You could probably drop it out of a helicopter and it would still work, though. But I can just imagine a bunch of idiot kids with FRS radios jamming the Guard. They need discrete freqs, like any public safety personnel.

Well, sort of.

The press does not understand radio as you or I do.
Encryption and encoding mean the same thing to them, but not
to us.

Remember how that one reporter who wrote the story on the
Bill Cheek bust explained how MDT's work? The word encrypted
was used, when encoding was the correct term.

Digitally encoded systems such as APCO-25 compliant systems
will eliminate this problem, and the project 25 committee is
in full support of APCO-25 compliant scanners for
professional and hobbyist use, as it will save public safety
agencies millions. What's more, should some smart ass get
his hands on an apco-25 compliant radio and get on the air,
a few keystrokes from the dispatcher's terminal is all that
is required to shut him out, permanently.

This is no doubt what the reporter is referring to.

Honestly, I'm surprised the problem isn't worse, considering
many agencies are still using conventional VHF and UHF
systems that were installed 30+ years ago.

Yes.. the guard and reserve now play a much more important part in the
overall US military... many Active military jobs are now handled by the
Reserve/guard components. Equipment and training quality in many cases are
top-notch. These folks should not be taken lightly... especially the
guard, whose budget is state funded.

FRS is lightweight, each man can use a radio, whereas the bulkier equipment
is used by groups no smaller than squad size. It gives each man the
training needed for proper commo use.

> asking price, and sell it.

Because eBay is better! You know you have a bit more protection than here on the newsgroup with half of the people hiding behind these stupid fake email addresses. At least there you know if a person has had a bad dealing before, Just look at the feedback. I'm not saying that it can happen there but its more likely to happen here as it has with me.

Laurin Cavender telesensor@bigplanet.com just took me for just under 100 bucks and it isn't going to happen to me again!

Why are you people whinning about it.... If you see a "FA", don't read the damn thing! If you have Netscape 4 / IE explorer 4 or better then you have news filters you can set up to not even see them. Most of you who are bitching are mad because people actuly get a fair price out of waht they are selling. You just want to pay pennies on the dollar for something! If eBay wasn't a good thing do you really think it would be so popular? I have bought many things from ebay and every time I bought something I paid EXACLY what I was willing to pay. I never paid more than I was willing to pay.

So now tell us what your real problem with eBay is? You just want to get it for less than whats it worth right? Everyone wants to get a good deal. So bid what your willing to pay for it and shut up.

Here is what I like about eBay
Pictures.... I want to see what I'm buying....try that on the newgroups and you will get bitched at
Feedback... You can see if the seller is a good guy/gal. Your pretty blind on the NG
Lager source.... How many people do you think uses the NG compared to eBay? Ebay has millions a day!

Actually don't. FRS are fine for routine BS traffic on weekends. The alternative is to purchase PRC-127's at $1000+ a pop. Why use those just to help backup trucks or communicate a very short range. If you ask me, thats being smart. My unit has 10 PRC-127's and they cost a fortune to repair. I'd much rather hand guys FRS radios and be out a max of $100

Avoid mobile or portable phones. Be aware that satellite phones and even your home wired telephone are not completely secure. Some portions of most long-distance calls are carried over radio channels which, although usually multiplexed and sometimes digital, may be susceptible to interception.

After several hours of screwing around today, I got some decoding to work. It (winflex 1.03) seems to be sensitive to my overclocked bus speed, I usually run at 504 mhz with a 112 bus speed, using the non overclocked 100 bus speed gets more reliable results, still doesn't seem to work 100% though.. It also helped that I was able to locate which frequencies did infact carry the signals I was looking for. I'm going to play around with the setup for the remainder of the week till I get the 4 level fsk up, then play with that for a day or two before I begin with more inquiries.

3676. PRO-26, How I added a microphone level continuous volume output. (0/1)

Newsgroup: rec.radio.scanner
Date: 2000-02-08 00:00:00 UTC
From: Jim Cordner <jimc_spamicide_@interlinks.net>
Message-ID: <qrq1asct74bjultskjhf646a3ss206nule@4ax.com>
Source record: 94214

The modifications I effected on my unit for microphone level continuous volume output are described in the two (2) attachments with this message. These attachments are an example of a typical modification that was performed to achieve the intended end and is not intended as an instruction for such modifications.

Therefore anyone using these ideas for their own purposes does so at their own risk. Modifications of this type usually void manufacturers warranties.

The attachments have been supplied in both bitmap ".BMP", and Word Meta File, ".WFM" formats for your viewing.

Jim Cordner

A lot of good points made in this thread. After reading them, I guess it would be good, in a civil emergency, to be able to grab radios from a K-mart if needed. Remember the North Hollywood bank robbery? The LAPD going to gun shops and grabbing AR-15s?
I know the units are strapped. I'd rather see them have the fuel to run their heavy equipment if we get flooded again. This might be a good way to ensure each man has comms rather than having one radio per squad. Looking at FRS in the stores, I see cheap junk ones, and I see rugged units suitable for hunting, adventure sports, etc. As long as the Guard is issued good ones, capable of withstanding the conditions in the sort of emergencies they're called out to handle, OK. Here in New York, we've had flooding, ice storms, preventive actions in flood-prone regions...most of the local units are Engineering Battalions, so you can imagine the conditions they work in. I say let the Guardsmen decide, and with the budget constraints, choices have to be made.
BTW, in a disaster, who does the Governor call: heavy equipment operators in camoflage, most of them operating engineers by trade, or the state legislators? Who would YOU rather have throw up a levee or divert a river? If you needed food, shelter, and transport, is some bureaucrat going to fly a Blackhawk to save you?
I remember Hurricane Agnes in 1972, when the Pennsylvania NG plucked people off the roofs of their destroyed homes with UH-1s. Those pilots are way underpaid. I saw a Cobra at an air show in 1993 that had 100mph duct tape over bullet holes the bird had received in Viet Nam. I think it belonged to one of the outfits that responded to the flooding in the Wyoming valley. This is the real shame. Our taxes are being squandered on rubbish. The more you're worth, the less you get. I don't see many suits from the state capitols stacking sandbags. Guess I'm a real subversive, huh?

So are there any scanners or any programs that can be linked to scanners to hear APCO digital modulation? I have a BC-245 and hear analog trucking systems fine but digital is slowly taking everything over. Email or message me thanks.

hi folks

while passing through virginia on my way back to austin
from washington, i was blessed with the first traffic
violation ticket of my life.

despite the fact that it was 3 in the night and not a
single car was visible for miles in either direction . . .
i was surprised indeed. a cop materialised from the
treetops and clocked me for 84mph (on a 65mph interstate).
after a car search and id'ing the absolutely sober
occupants in the car, he proceeded to give me a ticket.

the irony is that it say 'reckless driving'. not quite
educated in this area, i later realised that this was like
the coupon that says 'not-negotiable' and i would have to
appear in court.

how do they expect you to appear in court in prince william
county, VA, when you stay in TX and can't go sightseeing to
VA.

all advice appreciated. anything towards
postponing/cancelling the inevitable trip.

Oh Please spare me!

The bottom line is this. Either you pay the bond for the speeding ticket by mail, show up for court on the day indicated on your citation or pay the citation in the county in VA where you were stopped. Those three are easy. However, if you chose NOT to pay the bond and assume that they will "forgive and forget" you think again! The Non-Resident Violator Compact is active in both VA and TX! You don't pay that bond, kiss your drivers license goodbye (as in suspension of priviledges) until it IS paid!
Those are your options, simple is it not?

Later,

Trooper

I just received by ICOM R2 wideband receiver a few days ago, and it has many strong points, and a few weak points. For example, great sensitivity, poor selectivity.
Rich's review "hit the nail on the head".
My observations are exactly in sync with Rich's comments. Therefore, I trust that probably all of his reviews are accurate, regardless how he accessed the rigs.
I agree that a professional restaurant reviewer working for a newspaper should pay for a meal
and go incognito, but it is unrealistic for anyone to buy 30 scanners to review them. Who knows,
perhaps Rich has bought at least 30 anyway!

Actually, the RS telescopic antenna is a decent value for $10. It works good for wideband scanners
for AM broadcast, shortwave, and other lower frequencies.

If you have a decent HF radio, you could use your 2 level FSK to decode stuff like RTTY, SITOR-A, SITOR-B, CW etc. You would need a program like RadioRaft. RadioRaft is currently at 3.0, I think. It is available from www.pervisell.com for about $30 or so. You can also download a trial version of Hamcomm, which has full functionality but for a limited time. One other possibility are WX Faxes. These can be found on HF as well as in the 137-139 MHz band. I've done a bit of digital decoding with programs like RadioRaft, Hamcomm, WDECODE (uses your sound card) but have not done any of the Fax stuff. At best with a Hamcomm type interface and a program like RadioRaft it is difficult to decode a lot - takes a lot of patience. Anyway. if you have an HF radio and need help getting started, drop me a line and I will do what I can.

I guess all I can do is hang my head in shame...

At my Army National Guard drill this past weekend, of course there were PRC77s and VHF portables galore, but folks can you guess where your tax dollars are going as well now?

F - R - S !

Not GMRS, yes that's right, the Army National Guard was using "SpeakEasy" FRS handhelds. We used the same radio procedures as we did on any other military radios, but on these stinkin' little plastic things!

Pathetic? Cost-effective? Any excuse at all?

3687. Bill Cheek

Newsgroup: rec.radio.scanner
Date: 2000-02-08 00:00:00 UTC
From: "Jeffery A. Swan" <scientist@engineer.com>
Message-ID: <389F86BA.D48324F4@engineer.com>
Source record: 94349

Please forgive my ignorance. Even though I have been an RF engineer for many years, an avid scanning hobbyist, and own all of Mr. Cheeks books I just recently became aware of his situation with our federal government (OK so I'm kind of an introvert). After reading all of the information I could find on the web and past news group postings I am quite decidedly Pi**ed off. The good, bad, and ugly have all been hashed out here in the postings and I do not wish to relive that. What I am interested in is our freedom as citizens of the United States.

I find it quite ironic that that even though our tax dollars fund the FCC, a federal organization that is appointed NOT elected and is only answerable to the president of the United States, governs our rights as citizens. They govern what we can and can not listen to on the airwaves, what we can and can not send on the airwaves, and sell sections of the airwaves to the highest bidders. Now do not get me wrong, I truly believe that we need a set of checks and balances on something as powerful as that portion of the electromagnetic spectrum upon which we send and receive information. However, I would like to be able to elect the officials that do such governing. I will now step down from my soap box and continue on with my intended post.

Knowledge is power and the only way to maintain our rights is to have this knowledge. I have worked for many of the "big" companies that produce RF equipment including or own DOD. Currently I own a small engineering company which employs some of the best people I have ever worked with and we have come to agree upon a course of action. Over the next few months (and probably indefinitely) we will be instituting a web site with any and all information dealing with the reception of, conversion of, and monitoring of our RF airwaves. We will have links to overseas software sites, PCB negatives for etching boards, and as much tutorial information as you, the american citizen can ask for... all free to those who wish to read it. In the next couple of days I will publish our new web address. We would at this time like to solicit any questions you may have and even a possible name for the site. Quite simply we want this to be the largest, single source of free information anywhere.

I apologize for the length of this message but we wanted to get this out to all of you. And of course as always, the flame-throwers in the crowd may now light their torches.

Kindest Regards,

The entire staff of
Spectrum Engineering Technologies

Since Mambo Kid doesn't know when to quit while he is ahead, I could
not resist jumping in here to Rich's defense. Amazing how stupidity
reigns on these newsgroups.

>Okay, I agree with your points, but only partly.
>
>Major magazines like Motor Trend do not pay for all of their test cars, but
>at the same time, they can claim to adhere to certain journalistic standards
>(i.e. they say they are not biased in any way and most of the time most
>people believe them). Further, they return the auto after the review--or at
>least not those kept for long-term review. Rich apparently keeps the stuff
>that he gets, so in a sense he is being "paid" with a product to do the
>review.

"Apparently" keeps the stuff? Do you know for a FACT that he keeps
the "Stuff?" A word of advice that might save you some money in the
future....know your facts before you make a public statement against
an individual. You talk of journalistic standards, yet you know
nothing about them.

>Legitimate news organizations do not keep the products they are asked to
>evaluate. Nor do they accept favors like software that they don't intend to
>evaluate.

Oh PLEASE....and CLinton simply inhaled. You CANNOT be that naive.
"Favors" in any endeavor are what make the world go around my friend.

>I don't have any knowledge of Rich's practices in this regard. My
>point is that if he wishes to pass himself off as a legitimate news source
>(and based on having "news" on his home page, it would seem so) then he
>should adhere to the same standards as other news outlets.

Sheesh, in one breath you say you have no knowledge, (this is quite
apparent) of his practices, yet in the next breath you condemn him for
the practices you have NO KNOWLEDGE OF!!!!

Since when he Rich Wells passed himself off as a legitimate news site?
Show us examples of this to back up your claim. DEFINE a legitimate
news site.... Define NEWS....

You have GOT to be kidding us with that one.

>However, if he wishes to be the Rich Wells get-what-I-can-and-give
>my-opinion-one-way-or-the-other Web site, then in fairness he should provide
>some statement of disclosure so the reader can put his remarks in context.
>What's wrong with that? To say: "I'm reviewing this product; and by the way,
>it's a freebie." Isn't that merely being complete and fair to his audience?

>I don't understand why he objects so strongly to being open about his
>standards for reviews.

I will state emphatically that I never viewed the site, or Rich Wells
as a get-what-I-Can out of it type of guy or site. What a shame, and
what a disgrace for you to make such a statement. This is the thanks
one gets for doing something for others. I wouldn't be surprised if
Rich pulls the plug on the entire mess, and uses his obvious talents
to make a TON of cash designing web sites for paying customers,
instead of enduring endless drivel and complaints from a moron like
you.

>Rich wants to be taken seriously as an objective reporter of the scanning
>community.

He IS taken seriously, as a fellow hobbyist sharing his OPINIONS
publicly with others, and creating a forum for the exchange of ideas.
He is NOT a "Reporter!!!"

>Then, he shouldn't mind when people ask him to state his level of
>objectivity. His protestations are either disingenuous or he is merely
>naive about the import of his Web site.

What protestations? He responded to you, which is more then I
would've done. Is he not allowed to respond when being BASHED?
It is you who are naive.

Quit bitching, and do something positive for the hobby.

<Snip>

I bet if all these people who go around claiming things about Rich's site were slapped with a libel
or a defamation of character lawsuit, they'd think twice before posting such bullshit to the newsgroups.
I was on the net before the net became a household word, before AOL flooded the planet with disks
and CD's, before all the point and click wannabe-hackers.... and in all that time.....
I've seen the newsgroup message quality go down down down, and seen the bullshit go up up up.
All you people who say "Oh, Rich kept the radio so he had to write a good review on it" or
"Rich gets free goodies" etc. etc... I bet you tell your bosses "Oh no, I don't need a raise" or
"I don't need a Christmas bonus" or "I don't need that promotion." Yeah.... right.....
If a company decides to give Rich a radio, or whatever that's their business.
I've never been charged for using Rich's site, and based on the design and setup, the man puts a lot of
time into it. If you don't like it, don't go there.

960 - 1240 MHz is allocated to aircraft navigation aids like DME (Distance Measuring Equipment) and transponders which transmit from the aircraft on 1090MHz. Dial up 1090 on AM and you will hear a buzzing noise if there are any aircraft in the area.

I have also found a large number of FM wideband links and other strange stuff but they are weak signal, point to point (and anyway, they are in Australia).

Apart from that and maybe a few amateur tv signals, not much else.

And this from a country that keeps shouting about it's "freedom of speech".
When it comes to scanners, we in Australia have that freedom. Perhaps that
should read "freedom from speech".

Hello,

I have a problem with my Alinco DJ-X1.
Some buttons don't react or perform other
functions then what they should do.
With just a reset the problem is not
resolved.
When he's in the VFO everything works fine.

I know that you can perform certain codes
so you can expand the frequency range maybe
there are also code for a complete reset
of the CPU ??

Please can anyone help me ????

3703. Re: Etrunk problem

Newsgroup: rec.radio.scanner
Date: 2000-02-08 00:00:00 UTC
From: Rick Manns <rick@solcomguam.com>
Message-ID: <87p2mj$79b$1@brokaw.wa.com>
Source record: 94365

Hello Gary,

Name here is Rick. I manage an small ETrunk system here on Guam and noticed your posting and was not sure if you are a user of the repeater system you are asking about or if you are just trying to scan an ETrunked repeater system of a particular user. If you are having problems as a user it may depend on what radio you are using. The system I have is a three channel repeater system with several users. Each user is assigned a tone or DPL code on each of the three channels and the ETrunk logic board installed in the users radio basically does all the work. In my case, my customers are using Motorola Radius radios of various models. The way the ETrunk board control the radios is by taking control of the radio and causing it to scan each of the trunking channels. The board causes the radio to switch channels (scan) by controlling the data lines of the channels selector switch which is in BCD (Binary Coded Decimal) format to the radios CPU. In order for this scheme to work correctly the radio must be left on channel number 1, that is the channel selector switch on channel 1 which for the Motorola's is BCD zero leaving the channel data line open and controlled by the ETrunk controller only.

Now if you are having problems with your radio not following other users in your group, I suspect that either your channel switch is not left on channel 1 or the channel switch is defective (I've seen this problem before) or the ETrunk controller board was not installed or programmed correctly into/for your radio.

Okay, if I was wrong in my assumption that you are a system user but rather looking to scan the ETrunk system the problem can be something else, of course. Two things come to mind. First, ETrunking is not really a true trunking system so if you are using a trunk tracking scanner, this may be the reason you can't follow the conversation, just a guess here. The way ETrunk works is based on the PL/DPL code assigned to the user(s) of the system and the radios ETrunk controller board simply stops scanning when it "hears" its tone. With this in mind, a single user/group can be assigned a different tone or DPL code or combination for that group. In other words, lets say a three channel ETrunk user can have all three channel assigned with different tones, one for each channel. This would work fine as long as each user in the group has the same programming. This, indeed would make it a little more difficult for a scanner to follow a conversation, unless of course you know each of the users tone/frequency assignment.

Fortunately I have not programmed any of my users in this manner as I can imagine the headache that would be to keep track of all the combinations of frequencies, tones, and users :(The ETrunk system is okay, I guess, but it sure turned out to be a little bit of a logistical challenge to set up. You

have to installed the board in each radio (voiding the manufacturers warranty, I have to eat it) and program the board. You have to program the radio itself. You also have to program each user into each repeater controller, etc, etc, etc... Three channels is big enough for me. I don't know what your location is, but if it is a large populated area, I could imagin that you may have more than just three channels to deal with.

Anyway, I hope this shed a little light on what you are dealing with. If I can be of any further help, let me know.

Good luck and 73,

Rick - KB6IDK

Finally managed to save some money.

But actually can't decide between Optocom and UBC9000XLT

My main doodaa is Speed end Sensitivity(eg. geographical position)

Dont have any pros and cons regarding computercontrol - Don't care
wheter or not. Don't need trunk so its not a factor. Have high respect
for both companies.

Just the Speed and the sens..

I turned Strongsignals ressources up and Down but still cant decide.

Which one would you folks want ?

It used to be that the FCC would track, and stop this type of thing...of course in today's world, that would be depriving them from their freedom of speech! And of course if they did catch them, they probably wouldn't punish them...because, after all, it wasn't their fault. They would probably sue the manufacture of the radio, for allowing them to transmit.

This is sad, but what we've come to expect, in a society without accountability.

Several years ago I was given a set of two PRC77 with all sorts of accesories.
And I was so underwealmed by them that I promptly sold them to a local
mil surplus store.
They worked, but did not have anywhere near the range of my Icom IC-2AT.
I am talking about open country (the middle of a friends farm).
While the frequency range would allow one to dodge "jamming" (to some degree
at least), and they are rugged enough to survive plane crashes, for "normal"
communication they simply sucked.
While it is posible that either of these two radios had a problem,
talking with mil types convinced me that the performance was typical.
Given the age of the prick77's I would suspect that maintinance was
becoming a chore.
The PRC-177s(the units with the built in scrambling) was/is a sweet radio.
Good range, lots of privacy.
YMWV!

I do not support hackers who interfere with police or fire operations in any way. That said, it is curious that the L.A. Times reporter would write an article that seems to support digital encryption of radio systems. One would think the "press" would support open radio systems.

You can also decode ACARS aircraft data, pagers of course,MDT,

tell us more about your location (country) what interface you are using (maker) and what the signals sound like that you are trying to decode for pagers and we can help you more

Message-ID: <38A07789.40CCC136@NOSPAMmindspring.com>
Source record: 94386

I am looking for the frequency of the Bel-Air Patrol in West Los Angeles, CA. They were recently purchased by ADT Security. Their antennas appear to be cut for somewhere between 30 and 50 MHz. Also if you can find any other frequencies that they are using, please e-mail to ditlow@NOSPAMards.com (remove NOSPAM for correct e-mail address.)

Any help deeply appreciated.

Dave

3725. BC 8500 Display went dark!! Repairs???

i have a BC 8500 scanner with the very nice alphanumeric display, however a few weeks ago the display backlight went dark. A call to uniden revealed this would cost $50 plus shipping and handling to repain. I opened the unit and noticed the 4 light sources on the LCD panel. Can these be replaced (assuming that is the problem). Does anyone know of a fix that I can do myslef that doesn't cost $50+? Any help would be appreciated!!

"13A 61, 13A 61, switch to Tac 2 for 13 Victor 6"
"Victor 6 can't transmit on Tac 2, do you have a message"

That audio has been in just about every tv and movie involving police I have ever seen. I one point, a recording of that traffic, which sounds alot like LAPD comms, must have been made. The audio then must have been made available to tv and movie producers on a mass scale, probably as just generic radio traffic for use in the background. I have heard that same audio on COPS, Unsolved Mysteries, TV commercials, made for TV movies, and even as the sounds for those toy cars where you push the button and the lights and sirens go. On some episodes of COPS, at times it must not be exciting enough, because they dubb that audio in while filming the cops on patrol. I guess they don't think people don't pay attention to the radio sounds, or notice that they are the same ones all the time.

As a member of the "press" I would hate to see access to public safety communications taken away. However if this sort of nonsense (idiots using these frequencies illegally) continues the agencies involved must take action. Furthermore, I don't know what sentence a retard that does this receives but it should be very very serious. I'm talking 25 years in a federal prison serious. Maybe if we start to punish people in a ridiculously harsh manner, they'll begin to "get it!!"

When these jerks have their day in court maybe those of us who enjoy (or make our living by) our scanners should show up in support of the prosecution. Regardless of what WE do, if individuals continue to operate illegally on police and fire frequencies they will continue to jeopardize our hobby and our safety. Unfortunately it is probably too late to do anything about it now. Many agencies have already or are planing to changeover to newer digitally secure systems (no I don't want to engage in a debate on security).

If you know someone who is even thinking of transmitting illegally on ANY frequency you should contact the FCC and your local police department IMMEDIATELY. Oh and for all of you "Where Can I Get A Radio That Transmits On ALL Freq's" types, now you know why you get flamed. You have no business with such equipment.

Although the capability in some of the APCO 25 compliant radios
does allow remote kill of a radio, it is not required capability
to comply with APCO 25 standards.

Remote kill of radios is presently available in many
radios that are not APCO 25 compliant, nor even
digital. There is nothing to prevent an agency that
uses VHF conventional technology to have that capability,
other than financial considerations.

Upgrading to APCO 25 standards is not needed to
have lots more capabilities than is normal right
now.

Are they in your TOE? If not, then your commander should
be ashamed. Becoming dependent on them, and then not
being able to depend on supply channels during a conflict
for repair/supply/batteries could seriously detriment
your unit.

If they are in your TOE, then what is the problem?

They probably work better than the ICOMS that some
units are using now for tactical radios!

The problem comes in the unit becoming dependent on
equipment that may not be available during a conflict,
due to them not being in their allocated equipment.

Problem or advantage? In that situation, I'd bet FRS units would be much more readily available than PRC units - iirc, weren't they grabbing off the shelf GPS units during the Gulf War?
Still, weather or not using FRS in a Mil situation is appropriate is another issue all together.

Your unit commander probably had to make some tough budget choices.
Which would you rather have? Gasoline for your vehicles? Bullets for
practice? Military spec (high dollar) radios, or cheap commercial ones?
The budget only stretches so far.

And it doesn't matter, anyway. The Guard isn't business, nor is its communications controlled by the FCC.

Military, dig? GOVERNMENT rules, not FCC. They can use any frequency they darn well feel like using, subject to not causing undue interference. Out in the boonies where most drills happen, they're not going to cause trouble, nor are there likely to be many around to cause them trouble.

>because they are easy to mod? THANKS

If you want cellular, you're about 7 years too late. However, if you
can find a PRO-2004, PRO-2005 or PRO-2006 for sale, get it.
Otherwise, most scanners cannot be modified to receive cellular.
There are a few exceptions and some scanners can receive cellular
images. However most scanners do not have modifications. Some Radio
Shack scanners (and others) can be modified to store thousands and
thousands of channels, have computer control, S-meter, etc., but the
majority of scanners stay the same as when you buy 'em. But keep
looking for modification instructions, because there are exceptions.

I made the following inquiry on rec.radio.shortwave and realized today that maybe I would get some more suggestions/comments from this group as well.

I've seen references in the past to a method to use a PC with audio card to make recording s from a radio. Unfortunately I've lost track of those references and would now like to try that method. Can someone provide some info on the following questions:

- What application is best to use for recording from a radio?
(Would like some thing with a VCR type of timer, multi-events)

- Would like an application that compresses that audio as much as possible to allow several hours of recording while minimizing disk usage (lower quality audio is probably acceptable)

- Ability to playback audio at an accelerated rate to allow shorter listening time

Thanks for your tips and suggestions!

Replies included the following suggestions from rec.radio.shortwave

Cool Edit 2000. It has timed record
and sells for about $70. It's sold at the same site.

Check out http://www.davee.com/scanrec.html

Get real encoder 5.0 (or whatever the current is) from the real audio site.

Why isn't the Guard controlled by the FCC? The Air Force is, we have to have a frequency listing on file for inspection. I have also been at a base where the FCC yanked a primary military police freq due to the cops dicking around. They were still authorized to use their alternate net, however that left them shy a channel for backup.

They may coordinate with FCC, IF they choose. If they don't choose, the FCC has to go to IRAC, or some other agency which has the authority over military/government radio use, to complain thru channels. But the FCC did NOT, legally, tell the military anything about using a military channel. Perhaps, if there was interference, they went thru channels, and the appropriate agency shut down the troublemaking channel. If it was a shared use on a frequency normally controlled by the FCC, things may have been different. Miltary radio is governed entirely differently. That's why CAP could use modified ham gear, when cops can't legally do so, because the military doesn't have to have FCC type accepted gear. They DO have to have gear authorized for use, but it's an entirely different group that does so, for the military.

The PRO-43 uses EEPROM memory, which does not require power to maintain
its contents. It sounds like either one of the memory chips is defective or
the processor is doing a reset while powering up.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Dave Lucas N6YYM <n6yym@arrl.net>

Raymond K Bedford KF6WPL <docbbq@yahoo.com>
Fremont, CA

Jack Nelson <jadn@chevron.com>
La Mirada, CA
Hello, my name is Jack Nelson and I am employed by Chevron Pipe Line Company In the Los Angeles Basin. I am one of two members on my team involved in the ICS. I have completed the ARC Emergency Response Training and am currently taking classes to train basic First Aid and CPR through the American Red Cross. I have also recieved certification from FEMA for Community Emergency Response.

Loyd C. Headrick KF4UGT <kf4ugt@hotmail.com>
Chattanooga,Tennessee

I've been an Amatuer radio operater for three years and work with RACES and ARES here. I work with Volunteer State Rescue part of the Emergency Services here. Primary response is water rescue. We all depend on communications for information needed to get the job done.

Mike Saculla WA6FQM <fqm@msn.com>
Stockton, CA
I'm president of the Manteca Amateur Radio Club (MARC). Our club is active in RACES with the City of Manteca. We regulary practice our emergency preparidness with various events during the year. Our biggest achievement to date was primary communications for Dept.of Water Works, et. al., during the floods in south San Joaquin county January 1997.

MARC is presently establishing ties with the San Joaquin chapter of the Red Cross to organize and strengthen our mutual capabilities.

MARC is also experimenting with multimode capabilities during emergencies. Along with standart FM voice operation, we are now incorporating packet, APRS, ATV and SSTV into our capabilites in the field. We plan also to develope simplex and crossband repeater systems for use if our main repeater is lost.

Douglas Stinson KG6ADR <douglas_stinson@excite.com>
Fremont, CA
I completed CERT training in Oct 1999. The CERT training focused on using "runners" to communicate between teams in the field and base. This seemed impractical to me. So my wife and I desided to join the group of CERT members who were also Ham Radio operators. Hopefully, we can contribute to effective communication via radio within our local CERT organization.

Doug L. Griffiths KC7JEL <kc7jel@lightcom.net>
Rupert, Idaho
You could call me the profesional volunteer. I belong to Magic Valley RACES/ARES, Civil Air Patrol, Disaster Services of Minidoka County, and I am a DSHR volenteer for The American Red Cross. I do have other things I do unrelated to disaster also, such as fighting the computer.

Brian Carroll <zaephod@gofree.indigo.ie>
Dublin,Ireland
As a Radio Operator with A Volunteer Fire Dept. I am always interested in improving communications. Looking forward to receiving new ideas. Keep up the good work!

Daniel Hancock N8DJP <n8djp@qsl.net>
Dearborn, MI
I am Deputy RO/EC for Wayne County Michigan. Wayne County has a total population of over 2 million (includes the City of

Detroit). I am also a professional police dispatcher with over 10 years experience. Our RACES/ARES organization is suffering from the same problem most volunteer agencies are, a lack of active volunteers. With many requests for amateur coverage for the Y2k non-event, we were stretched very thin. Had things gone wrong, we probably would n ot have been able to fulfill all the requests we had, this despite the fact we have over 150 "registered" RACES members. Most of these people are "ghost" members who for some reason feel a need to obtain their card but never show up for nets or meetings, or actual events for that matter. Some who do show up for events have never participated in nets or meetings so they are of little value. Is there a cure for this problem? If there is, I'm unaware of it. Anybody with ideas to drum up activity/enthusiasm please let the rest of us know!

Current Events:

From: Ross Peterson <WB6ZBU@pacbell.net>

There are 2 upcoming ham classes in the San Mateo area. The first class is March 4 & 5 (Saturday & Sunday) in Foster City at the Foster City Recreation Center, 650 Shell Blvd, Foster City. This class is primarily a no-code technician class, with testing & study materials available on Sunday for any class of license.

The second class is April 15 (Saturday) at the Mount Alverno Conference Center in Redwood City, 3910 Bret Harte Drive. This class will be the first class under the new licensing regulations and will offer code testing at 5WPM; upgrading without testing (for those who qualify); and classes for the new technician, general and extra licenses (the extra will require advanced study, please talk to me for information).

Both classes will start at 8:30AM each morning and will run until approximately 5:30PM. If you are interested please let me know. Class size is limited - please reserve early.

Amateur packet radio APRS has a new "protocol" document soon to be finalized. The new document includes the following:

Conventional packet radio is really only useful for passing bulk message traffic from point to point, and has traditionally been difficult to apply to real-time events where information has a very short lifetime. APRS turns packet radio into a real-time

tactical communications and display system for emergencies and public service applications. APRS provides universal connectivity to all stations, but avoids the complexity, time delays and limitations of a connected network. It permits any number of stations to exchange data just like voice users would on a voice net. Any station that has information to contribute simply sends it, and all stations receive it and log it. APRS recognizes that one of the greatest real-time needs at any special event or emergency is the tracking of key assets. Where is the marathon leader? Where are the emergency vehicles? What's the weather at various points in the county? Where are the power lines down? Where is the head of the parade? Where is the mobile ATV camera? Where is the storm? To address these questions, APRS provides a fully featured automatic vehicle location and status reporting system. It can be used over any two-way radio system including amateur radio, marine band, and cellular phone. There is even an international live APRS tracking network on the Internet.

There are routinely between 150 and 200 amateur packet radio stations using APRS in California at any given time. For more information on APRS, check <http://www.tapr.org>. Or, for information specific to California and adjoining states, send email to <admin@lists.monterey.edu> with only "info aprs" (without the quotes) in the body of the message. A email message will be sent back to you with more information.

Always love it when the person telling the story makes it out that the cop is in the wrong for citing, checking the passengers, vehicle, etc. Ever cross your mind that you were the one that was stopped for the violation in the 1st place? You state that you were doing 84 mph in a posted 65mph zone. Press on idiot, and take the troopers advise. By the way, if you choose to go to court, your chances of having it pleaded down to a lesser charge are favorable. Just don't go in with the attitude that it wasn't your fault. Own up to the violation.

I ususally will keep my mouth shut during these "political" threads, however the above post got to me.

Do you want to BET your FREEDOM and the Lives of your Children and Wife on the fact that the National Guard's chance of ever seeing action is "very slim"?

In my option these men are being trained with US Tax dollars and should be training with the SAME equipment the would use in combat. Of couse the "toy" radios worked on close in training, however would they work in a real life situation? It would be ashame to have these men in danger, then ask them to use a radio they've never used in training.....

Freedom of the U.S. Constitution can only be protected with a strong military.

That is not an historically correct statement. Excessively strong military organizations tend to wrest power from weak civilian governments, especially in times of crisis. A strong military can protect our freedom from foreign military threats, but they are not "the right tool" for the job of protecting the Constitution. That requires a moderately strong representative government and an empowered and involved electorate.

Well, let's see again... Would you rather one extra guy in your group has that $1000 radio, or would you rather everybody in the group has a cheap FRS and then you have one less $1000 radio?

I don't think that's too tough a decision.

I hear the same arguement all the time about the 'best' pistol. You just gotta have a 45 auto or you ain't dick. Well, fine, that 45 auto sits in the display case waiting for the bucks to by it, when that little 25 is in your pocket.

(Sorry, I don't own either a 25 or a 45. I carry a 3913LS when I have the 'ability' with clothing and FAG bag. A Walther TPH when I just need to slip something in my pocket.)

I had an arguement with one guy at work. Best tool vs best tool for the job kind of thing. I wanted a meter to check if a circuit was on. So I had the tech order a $30 Rat Shack meter. Well, about 4 or 5 other people decided they'd like one for their drawer. No big deal, order 6 of them, less than $200, right? Well, the guy that looks over the orders decided that the $30 RS meter wasn't worth beans, so he changed it to a $550 Fluke. Now I suddenly get called in and screamed at for ordering 6 meters at $3300!! They wanted to cut it to one. But we didn't WANT 'ONE' expensive meter!! We wanted 6 CHEAP meters!!

Hung up on the best tool instead of the best tool for the job are we???

Can somebody please provide me with a list of frequencies for Ohio?
Especially around the west central part around Dayton.

Thanks!

Eric

The following items fit the BC120XLT, SC150, BC220XLT, and BC230XLT per
the Uniden website. They may fit others, I don't know.

Qty Model Desc Price
14 CRX-120 Charger $7.50
15 AD-70U AC Adapter $5.00
68 BP-120 Battery Pack $7.50
38 Handheld Scanner Antennas w/BNC $5.00

All look good and seem to work. No guarantee.

All prices are plus shipping (UPS)

I wouldn't. In Bosnia NO radio was "supported". FRS radios are perfectly fine for bullshit short range comms. When I was in Bosnia we had tons of PRC-127's. There was NO maintanence avail for them or our VRC's, SINCGARS, or MSE's. If we wanted something fixed, we had to send it off to Germany and pray that it got sent back (We never did get back one of our VRC-77's). I'd rather have avail 20 FRS radios than 2 PRC-127's. You are not using PRC's or FRS's for critical tactical traffic, they are used as radios for bullshit admin traffic around bases. Wanna talk from base to base or air2ground? Use a mil radio. There is no need for the 1SG to have a $1000 radio to talk to the motor pool about the CO's ride. The military supply system can support them, it's a matter of planning for it. We had a shit supply chain over there but mail was pretty damn fast. I ordered 20 NIC's for $19.95 each from Surplus Direct in Hood River, OR and had them in 7 days. Had I ordered them through the proper "military" supply system, I would have paid over $200 per NIC and had to wait over 2 months. The military is buying FRS because they are cheap, available, and they do whats needed.

Dave,

I'll agree that an "...excessively strong military..." organization is unnecessary in the context of our democracy, but to suggest that there is anything in our political or military history that makes such a threat in this country flies in the face of historical fact. I know I'm going to get it from the Ruby Ridge and Waco partisans, but those are the facts. In the face of not being paid for periods of over a year, our armed forces have maintained an admirable adherence to the principle of civilian control. You are quite correct that a strong democracy and an involved electorate are keys to our freedom, but the oath to "preserve, protect and defend" cannot be ignored. That oath s the basis to the military's commitment to civilian control and itself against a safeguard against any kind of coup that you might have imagined.

I was wondering if anyone could tell me how I could go about modifying my radio shack pro 64 scanner, so that it would be possible to pick up more frequencies(ie 54-108, 869-894, etc.) I know there is a way to do this, (I have heard about chips you can add, cutting wires, etc.) I'm just not sure how. If you could help me out it would be greatly appreciated. Also, I have heard about programming the scanner with the computer. If anyone could pass me more information or a link to a site about that, I would be very grateful.

Lets see. The unit is in a country far away. The only equipment
and repairs they are able to get is through the Military Supply
channels. Military supply channels are set up to handle specialized
equipment, not FRS radios. Hence, FRS radios are NOT more likely to be
more readily available than the specialized equipment. Anyone
who has been in the military can attest to the above.

I would rather have the radio that works, and is supported
by the supply system so that it keeps working.

If FRS radios were supported by supply, and repair services,
then by all means, use the FRS radios. If they are not,
then use what is supported.

Thanks for the tips. I'll check them out.

And to reply to the other respondent:

How about simply connecting the 1/8" headphone
jack on your radio to the 1/8" line input or
microphone input on your PC? Using monaural
wire it has worked fine for me...

My goal is to record multiple events unattended so I'm looking for something that can give me a little more control than start when I leave for work and quit when I get home.

Ravi,
About 30 yrs ago I had a similar in California. I took my ticket back
to Arizona.
I visited California a few time a year for about 3 yrs after. I was
very careful and very lucky.
After about 4 yrs I got a letter from the State of California asking me
if I would like to settle this matter by making a payment of $28. The
check was in the mail within minutes.
I don't believe any state will extradite for this type of warrant. This
may, however, result in delays with release almost anywhere in the US.
My vote is for remembering the situation, but don't return to the state
that issues the ticket (warrant). If you have a friendly local lawyer,
you might want real advice.
Robin

Not at all. We got to be a nation because our military - such as it was at the time - was stronger in important ways than King George's military. The Civil War was conducted on OUR soil by OUR military, with generals taking sides in a political dispute. What would have happened if, instead of the March on Atlanta, there had been a southern March on Philadelphia?

I wasn't speaking of U.S. history when I made my comment, anyway. This is an international newsgroup, and there are plenty of examples to prove my point in Europe, the Middle East, Africa, and South America.

The leaders of military coups had all taken oaths, too.

Stephen,
I don't have any experience with the 9000XLT. I have owned an Optocom for almost a year now. But it seems that these scanners are almost designed for different purposes.

The 9000 looks like a great receiver for general purpose scanning. I am biased towards the Optocom, but I would say if general purpose listening on mostly fixed frequencies is what you are looking for, (and your description appears so) then I would recommend a general purpose scanner like the 9000XLT(although with no experience I can't recommend the 9000 specifically)

What attracted me to the Optocom was the fact that I am not only an avid listener but an experimenter. The Opto is a dream box for experimenters.

I think the receiver is top notch speed and sensitivity (same as the Pro2042).

I use it a lot for trunk tracking with "TrunkTrac" software. I love viewing the entire trunk in operation and it is one of the few solutions I have seen for trunktracking with a computer and only one scanner(other than a dedicated trunk tracker of course). Of course you indicated no trunking interest.

When I want to search out new frequencies I use "Probe" software (exploring is ideal with a computer controlled scanner).

It also contains lots of other modular built in goodies which I can't keep my hands off. It is like buying a Pro2042(sans display), and OS535 interface, a 2 level dataslicer, a bitbanger trunk decoder, and a CI-V control port all in one tiny box. The modules can be mixed and matched or used separately used separately with other radios. It can also operate detached from the computer.

The upsides to the Optocom
1 - It is feature upgradeable - you can pick your favorite features in the software that you select to use with it. If another trunking comes along, sooner or later someone writes new software.
2 - it appears to be universally supported by software developers
3 - its modular hardware design makes it flexible for lots of applications

The downsides to the Optocom - in my opinion
1- it requires a dedicated computer, although it is capable, scanning with no display at all, just doesn't cut it. You need either a display

panel or a computer screen
2- I have had 2 hardware failures, note I did buy an early model but
OPTO has been absolutely excellent about repairing it under warrantee
and upgrading. Seems more stable now but it ran fine for 6 months
before the last failure.
3- Cost, it may be more scanner than you need, you'll have to decide.

Good Luck, Mark XL

agreed.. this issue is discussed thoroughly if a little heavily, in the novel Seven Days in May. The US armed services have been overwhelmingly apolitical and committed to civilian control of the government. This will come as a minor shock to the conspiracy creeps, but it is so.

<<basis to the military's commitment to civilian control and itself against a safeguard against any kind of coup that you might have imagined.

Robin,

That may have worked 30 years ago. But not now. States
have become signatory to an agreement where one state
will actually suspend your driving privlidges for a violation in
another state. True, you can't be 'extradited' for a speeding
ticket, but you CAN be 'suspended' in your home state. And
then have to fight to keep your license valid. There are
procedures to do this, but they will take time and effort, and
almost certainly more expensive than paying the original ticket.

Fight any 'point' or driving record 'safety' assessment after the
fact if you want to fight something. That's usually much easier
than fighting the ticket, and can usually be done local to where
you live. And it's usually not difficult if you have a relatively clean
record in your home state.

Telling someone to wait it out like your example, in todays
climate of exchangable data, is irresponsible.

> then use what is supported.

I agree completely. But the task is not to bitch about a possibly
inferior device, but to make sure the device is used correctly. And
that means the logistic support for that device. From supply to
procedures for it's implementation.

> > I had an arguement with one guy at work. Best tool vs best tool for

> on that cheap meter, nor the supply channel for that cheap

> meter and it's repair.

No, it doesn't. But you're hung up on the 'gotta have xxx' mode of operation. And when you can't have xxx you look like you'd rather do without.

The real issue is you CAN'T have xxx, for whatever reason. Now along comes yyy. It's inferior, it may be a piece of crap. It may be a limited use device. But you have it. Now, do you want to give it back and do without because it doesn't do all that xxx does? That it's not as accurate, not as stabile, not as durable? But it works!

It's like the guy stranded on a desert island turning down a ride in a native canoe because sooner or later he knows a power boat will be along to rescue.

However, the other side of this is that native MAY have a power boat, and a bunch of canoes. He just doesn't want to take the effort (for one reason or another) to bring that power boat. If that actually is the case, then you should work on 'convincing' the native that the power boat is a much better choice, especially in rough seas.

> > Hung up on the best tool instead of the best tool for the job are we???
> >
> I don't know. Are you?

I know I'm definately not. I use what I can, at the time, to do what I want to do. I may not like what I'm using, and try to upgrade. But you sure sound like you are!

Mike

Robin,

I've already read Mike Yetsko's excellent reply so I'll try not to belabor the point that's already been made. I just wish I had a dollar for every person who's come to regret simply ignoring a ticket they'd received in another jurisdiction. In my state the modern-day administrative fees for reinstatement alone are three times what they were in 1980. What that means is you'll NEVER see a letter from Maine offering to settle the matter for anything even close to the $28 you spoke of. Speeding ticket fines start in the high nineties and go up from there. Also worthy of consideration is what might happen to you if you are stopped for any reason while suspended for a failure to appear in court (even based on a default from another jurisdiction). Not all police agencies have a set fast rule, but we tend to arrest and bail anyone stopped for driving after suspension for a court default and traffic defaults are taken into consideration in any other instance where bail has to be set, meaning that a cite and release may no longer be possible for anyone following your "advice". Finally, the last piece of advice you gave is probably the most valid thing you wrote and applies whether one has already defaulted or not - have a lawyer try to square away long-distance ticket problems for you. It may cost more than simply paying the fine, but it should help protect you from hidden repercussions and the snowballing effect that getting caught driving after suspension often initiates.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

New scanner program with integrated trunk scanning is finally on the website:

http://www.micosyen.com/radio.htm

This program auto-detects and controls PCR-1000, R9000, AR8000 & AR3000A as either the main scanning radio or the trunk control channel radio.

AR-5000 support has been added, but initial reports indicate it does not work. I need help from AR-5000 owners to debug this.

Optocom, R-8500, R-7100, R-7000, AR-8200, BC895XLT & BC245XLT will be added in approximately that order. Opto and the Icoms should be done by this weekend. Check the website or this forum for status updates.

Thanks to all who have e-mailed and apologies that the software was not available upon the initial announcement.

Please use the e-mail address on the site for comments and questions.

Take it with a grain of salt. As you can see, the guy isn't all there.

Most of his stuff here is just incoherent babble.

My guess is that when the IG next comes to your VRC's new home, it will be sitting in the space above the ceiling tiles along with some of the other assets that aren't on the TO&E for that unit. (*DISCLAIMER* NOTE: this remark absolutely couldn't be based on personal observation of events that didn't take place in Germany in the late '60s.)

Which is my point. If the Commander is doing something at a
local level, and there is no support for the function, when
it will be used at a higher level, then I don't feel like it
is a good idea.

If FRS radios do the job, and they are supported, then by all
means, save me some money!

> No, it doesn't. But you're hung up on the 'gotta have xxx' mode of
> operation. And when you can't have xxx you look like you'd rather
> do without.
>

Nope. All I want is what will do the job, and what can be
supported. Otherwise, I would be driving a mercedes, and not
a Caprice.

If the people around here could only work on a Mercedes, and
had no knowledge or parts to work on my Caprice, I would most
likely start looking for that Mercedes.

Greetings group

I have written to you in the past, regarding the increasingly serious threat that digital systems pose to our scanning hobby. I have gone so far as to purchase an Astro Saber radio for my own use. However, the hurdles of having the radio programmed are formidable. (more news on that later) Digital is not all that it is cracked up to be, however. My local PD has had ongoing problems with the reliability of their system. The most recent manifestation of this is described in the following article that appeared in our local newspaper this morning (2/10/2000)

I would appreciate any questions and/or comments.

Regards,
Mark Elie
melie@cybertours.com

Cop: Digital radio terrible
February 10, 2000

Problems plague official's radio system
By Mark LaFlamme
Staff Writer
AUBURN - Police officer Tom Slivinski remembers a day last year when he
was running through the woods near Great Falls Plaza, looking for a girl
who had fallen 50 feet from a trestle onto rocks. He had a new digital
radio in hand but couldn't get through to an emergency dispatcher.
The 13-year-old girl suffered head and chest injuries and she broke both
her wrists. It took emergency officials several minutes to reach her
because Slivinski was unable to radio in her location.
Lewiston police officer Matt Cashman recalls chasing a suicidal suspect in
the woods around Lake Auburn last summer. Unable to get through to
dispatchers, he was on his own in the woods.
"For eight minutes, they didn't know where I was," Cashman said.
Some police officers insist it's a matter of time before the radios lead
to disaster. Dead spots - locations where an officer is unable to transmit
to dispatchers or other officers - occur every day, officials say.
"This system is terrible," said Slivinski, a police officer for 25 years.

"The dispatchers don't hear us half the time. Or they think we say something we didn't say. It happens on a daily basis. We know we can't count on the communication so we look after each other.
"This is the worst radio system I've ever worked with."
The consolidated 911 dispatch center is 4 years old. The digital radio technology for the two cities cost about $495,000. Those who rely on it
most insist it's only a matter or time until it leads to tragedy.
"It's communication. It's the most important part of our job," Slivinski
said. "It's an officer-safety issue and a firefighter-safety issue."
Lewiston and Auburn fire departments switched back to the old analog radio
system shortly after the 911 consolidation. Police, however, don't have
analog to fall back on when the new digital technology fails them.
The problem with radio communications may be as simple to solve as erecting a new tower. Currently, towers on Goff Hill get bombarded with
pager and cellular phone calls and they tend to interfere with police communications.
"We're in the process of finding a new location to put up a new tower,"
said Norm Guay, the director of the 911 Committee. "We need to get all the
facts. We'd like to do it as soon as we can, but we want to do it right."
A new tower will likely cost between $50,000 and $150,000, Guay said.
System Manager Terry Delano said it's all a matter of finding the right
spot for a tower. The Twin Cities, he said, is a troublesome spot for radio communications.
"The river creates a valley," Delano said. "There are hills on both sides.
And with a portable radio, you're very low to the ground. We've discovered
that the antennas are too low themselves."
Neither Guay nor Delano would give an estimate for when the tower might be
erected. Meanwhile, police officers like Slivinski worry that someday they'll be in serious trouble and the dispatchers won't hear their call.
"You just can't call out of some buildings," Slivinski said. "Our signal
is hitting the tower at the same time as a pager or cellular call. It blocks us out. If I'm running after a suspect, I'm thinking about officer
safety. I radio in and hope to God the dispatchers hear me."
When the consolidated dispatch center went into service in 1996, officials

said it would make handling emergency calls faster, more organized and more efficient.
But some police officers complain that the equipment was never field tested. Installing a new tower, some say, should have been done three years ago.
"The people that it affects the most are the officers out there on the streets," said Auburn police Lt. Michael Lemay. Their lives depend on it."
"An officer is going to get hurt if not killed," said Cashman. "But it 's
not just an issue of officer safety - it's a safety issue for the public,
too."
The new center cost more than $1 million when it was set up in 1996. New
computer equipment was supposed to make emergency response time quicker.
Instead, cops, dispatchers and firefighters who use the new equipment say
they have no faith in the new digital system.
"I'm surprised no one has been seriously hurt or killed," said Pat Beauchesne, who used to dispatch at the 911 center in Auburn.
In 1996, there were two serious structure fires a week apart in Lewiston.
One was on Lisbon Street and the other on Lincoln Street. Beauchesne said
each blaze got out of hand quickly because of radio complications.
"I worked during that fire without being able to hear any of the mutual
aid calls," Beauchesne said.
Beauchesne was dismissed from the dispatch center last year after she filed a civil complaint that alleged numerous problems at the center. In
her complaint, Beauchesne argued that problems with radios, lighting, heating, personnel and other matters led her to a stress-related medical
condition.
"I can't even begin to describe it," she said.
Beauchesne's civil complaint was dismissed in court. But no one at the 911
center is denying that there are problems. Mike Morin, a former Auburn police officer, took over this year as the new director of the dispatch
center after a long string of staff changes.
"There is nothing we're trying to hide here," Morin said. "There are problems, and I'm not going to say there's not. There are some issues, but
they're all being addressed."
One emergency dispatcher described the new system as a "Ferrari with a Ford motor."

But Morin and others at the dispatch center say improvements are imminent.
And some officers who rely on radio communications have faith.
"If there's anyone who can fix this, it's Mike Morin," said Slivinski, who's on the 911 Communication Center advisory board. "We have a lot of
confidence in him."

New scanner program with integrated trunk scanning is finally on the website:

http://www.micosyen.com/radio.htm

This program auto-detects and controls PCR-1000, R9000, AR8000 & AR3000A as either the main scanning radio or the trunk control channel radio.

AR-5000, AR-8200, R-8500, R7000, R7100, Optocom, user-specified CIV address, BC895XLT & BC245XLT support have been added, but since I don't own any of these radios, I need your help. Free final versions will be issued to anyone helping to debug.

Manually-tuned trunking radio support has also been added.

This thing works great on my radios, so I'm done till I hear from you guys out there.

Please use the e-mail address on the site for comments and questions.

Mike,

Remember how the City of Boston had hundreds (maybe thousands) of erroneously written traffic tickets, back in the 80's? How folks would find their DL renewals stymied when they had never even BEEN to Boston? And then they had to PROVE their innocence -- for a parking cop's error. I wonder how many of those errors were on out-of-staters who simply could not afford to go to MA to fight the ticket?

Your most cost-effective way is to whisper quietly while on the cordless.
This will at least reduce the range over which the scanner can overhear you.

>How can I make sure no one hears my
>phone conversations via scanner???

The easy answer is never use any phone that transmits any portion of the conversation using RF. That is _your_ side and the person(s) you are talking to side(s). Including picking up or retrieving TAD or voice mail or pager comms using "broadcast" (cordless, cellphone, answering service, and make sure there are no baby or room monitors, intercoms) equipment at any time.

The troubling part of this topic is why limit your eavesdropping concerns to scanners?

With roving wiretaps, telecomm companies forced to "assist" law enforcement and government agencies to monitor our locations (wireless) and conversations, concrete (through-the-wall) mics, employers listening in to voice comms & reading email, cross talk in multi residential dwelling phone wiring, pen registers, legal bans on effective encryption, hot on hook PBX and LAN systems and _more_,
there _is no privacy_ on telecommunications. Forget the concept. We lost it. It is gone!

Start reading Sites like the Electronic Privacy Information Center (EPIC) and similar. Contact the ACLU and learn what privacy rights we have already lost.
It's depressing, but important.

Don't want your telephone conversations repeated or used against you? Don't say anything on or near any phone that _might_ be used against you by anyone, anytime.

Sorry, but that is real life.....

Two times damaged my Scout. Acknowledged that I did it :-) Emailed
Kenny and in response got nice and personal answers. Shipped the unit
from Greenland to Florida. Had it back 14 days later. I think its
amazing in these days of email..... And wouldn't hesitate to buy
optoelectronics again. Anyway I think its a very interesting company
whith that line of products. I wouldn't neglect these in my hobby.

Just my 10 cents

Regards
Stephan

Unless you know someone within the company that programs the radios or can get your hands on a radio to clone, forget trying to figure it out on your own. And yes, there are problems many cities are having with their Astro systems. Some of these radio companies have very good reps who could sell just about anything. It's not until the system(s) are set up in the real world application that faults are found.

Check it out: This weeks BusinessWeek has a big article Cyber Crime--
about the latest web site break ins. On page 42 there is a pic of a
Secret Service agent standing behind a table of scanners with tape on
some saying "evidence." The caption is--Careful, its hot. Secret
Service agent Weaver with recovered loot. Companies are often slow to
report crimes and reluctant to reclaim goods."

There's some good scanners there! AOR, Icom, Bearcat... I'd get that
stuff back if it was mine!!!

Is it possible to fill the "Channel Name" column with the same name without having to type and retype it over and over again? For example, I would like to add the name "Police" in channels 50-75, and "Fire" to channels 76-100. Can I do this automatically, or does the name have to be typed in each and every time.

Thanks,

Ah yes, the wonderful Boston traffic people who didn't even bother
to spot cars, just make up numbers, make, model, etc., and fill
out their tickets. They probably just sat in their cars and bulk
filled out the tickets.

Those were actually easy to fight, as most of the plate numbers the
tickets were issued for didn't match at all to vehicles.

And a 'parking ticket' issued out of state in default for a 'vehicle' is
totally different for a moving violation issued to an operator.

By the way, there's another side to the Boston parking ticket
scams... Back about 1988 it suddenly became the 'thing' to pop
your plate off the car and put it in the trunk when you parked.
Well, the cops, finding a car this will would actually ignore it if the
meter was paid, but in violation they would run the VIN if possible.
I heard they were 'booting' the cars too. Anyway, some people
were 'swapping' plates. One guy got caught with a stolen plate
because he 'swapped' it with a car that was reported stolen. He
thought he had a free plate to use, but it got him in even more trouble.
Another guy was making plates. He'd spot a car with the same
make, model, and color of his, then make a plate for his car and
drive it for a while. He got caught one night in Concord when the
cop noticed he spelled MASSACHUSETTS wrong! Ran the plate,
and it came up with a string of warrants. The guy was grabbed
at gunpoint. All because he wanted to drive on another plate!

I'm sorry, but a 25% restocking fee is way too high. Most charge only a 10% fee and even then will waive it if you are buying something else. However in all fairness to Opto, their return policy is on their website. Whether I think it's good business is another story.

From the Opto website:

All Returns must be received within 10 days.

There is a 25% restocking fee on all refunds.

Returns with original packaging, product, or accessories damaged or missing will be subject to additional itemized deductions against refund.

Freight costs are non-refundable.

Grove will refund your money fully (less shipping charges) provided the item is returned within 15 days and you get a return authorization number. Here is Grove's policy:

In the rare event you should experience some kind of problem with any of the products we manufacture or sell, or should you have a complaint, please call us first at 1-800-438- 8155 or e-mail us at order@grove-ent.com within fifteen (15) days of shipping and we will gladly credit your future purchases, or we'll issue you a refund (less shipping charges)--your choice! ALL PRICES ARE SUBJECT TO CHANGE!

ALL RETURNED ITEMS MUST HAVE A RETURN AUTHORIZATION
NUMBER or the return is subject to a restocking fee based on the invoice value:
$0-$500 - $15; $501-1000 - $25; $1000+ - $35.

BE SURE TO REQUEST A RETURN AUTHORIZATION NUMBER FROM A CUSTOMER SERVICE REPRESENTATIVE!

Any product returned in not-as-new condition will be assessed a fair refurbishing charge. Be sure to include the return authorization number. Special order items cannot be returned.

I think Grove's return policy makes much more sense from a customer relations point of view.

Source record: 94154

I'm also thinking of tapping the baseband audio of the discriminator chip, but I don't have the electronic background. I have enough information that I understand how it works.
I believe that I have found the chip, although I'm not sure which is the Pin 9. The NFM IC chip is labeled on my Pro 90 as MC3361CD. I can't see a nook or notch or a dot on the chip. I have Bill Cheek's FAQ that describes in detail the process of finding the IC chip and instructions on how to tap the audio. I have the tools to do it, but I'm going to need a little help in narrowing down Pin 9 and finding a grounding spot. I think I have enough room to use a mini phone jack instead of the pinline sockets as mention on Bill Cheek's FAQ. I was thinking of using a 3/32 mini phone jack and place it next to A/C output plug of the scanner. I was going to solder the Pin 9 to the (+) leg of a 10 uf tantalum capacitor and solder the (-) leg to a hook up wire to the hot lug of the jack. Second, I was going to connect a hookup wire from the ground lug of the jack to the chassis ground. I might have it wrong. Any suggestions will be greatly appreciated.

Thanks!

Instead of doing something like this, which prevents us from listening
to " our tax dollars @ work ", they should put some type of alphanumeric
codes into the radios that the dispatcher could key into the dispatch
console and render the radios useless when the radios would be lost
and/or stolen.

> gotten an unblocked scanner this way?

I personally purchased a "unblocked" CPU unit for my PRO-2042 with slight delay. It was held up in Customs but the one call to the vendor got it to my door. I personally know of several others that have actually received regular scanners with no problem. One of the most important things is to deal with someone really reputable. I and many others will only deal with Javiation, their website is http://www.javiation.co.uk the contact is Jonathan. Jonathan's middle name should be "Service" be cause you get great service with this guy!

> If so, did you have trouble with
> the law? Has anyone gotten busted this way? Do the authorities really

> US and checking the spec's to see if it can recieve illegal
> frequencies?

Customs will check parcels and "seize" suspected illegal ones. I personally have not heard of this happening too often, but I'm sure it does.

3856. 4-lfsk from texas 2 way, anyone use it, I have problems

Just got the 2/4 level fsk from texas 2 way. The instructions are as vague and uninformative as posible. Can't quite get it working. Using slicer.exe, I get a signal, but it seems virtually random and there aren't any defined spikes like with my 2 level fsk. It actually looks more like a real signal when I pull the discriminator tap cord out (!?!?!). All of my programs either sit there and do nothing, or say they can't decode the data. Anyone have any ideas? Anyone have a working setup this thing?

Thanks for the responses, I am now trying to resolve this through a credit card billing dispute, it's just a shame it has to go to that. I've always had exceptional service and have been pleased with their products (although they seem quite a bit overpriced) so maybe the owner was just having a bad day. Also, their return policy is on the web site as noted, but it is not in the Popular Communications magazine ad, which is where my wife ordered it from by telephone.

Actually a lot of new police radios can do that, in the UK anyway, which seems a sensible idea considering whgat damage could be done when an idiot gets a police transmitter !

I use ADMS-1E for the Yaesu VX5R and thought the same thing.
What I found works pretty good is highlight the Alpha message
then use the " Ctrl C " copy command, then go to the next memory
space entering the frequency and so on and then using the paste
command " Ctrl V " for next Alpha with same name.
Best I can come up with, hope this helps, not sure how similar your
ADMS software is to 1E !

3868. R2 vs BC3000xlt

Newsgroup: rec.radio.scanner
Date: 2000-02-11 00:00:00 UTC
From: Bill <k9kz@indy.net>
Message-ID: <sa92gdq29gt92@corp.supernews.com>
Source record: 94170

I have an Icom R2. Yesterday I got a new BC3000xlt. In a comparison of 43 - 47 MHz the BC3000xlt wins
hands down. I really can't believe the difference. This is only my first observation but nearly unbelieveable.
The only difference in the antenna system is that I use an sma/bnc adapter on the R2. Nearly all signals that come in loud and clear on the BC3000xlt are poor to awful on the R2. Has anyone else noticed this with the R2? The R2 is only about two months old. Any comments appreciated.

loony toons from the net, establishing positively that a mind is a dangerous thing. anyone interested in exploring this further, see http://members.aol/phikent/kent.htm. I think the author was exposed to too much RF.

"MIND CONTROL: NASA MICROWAVE STUDY

Whisperings behind you

A decoy and deception concept presently being considered is to remotely create the perception of noise in the heads of personnel by exposing them to low power, pulsed microwaves. When people are illuminated with properly modulated low power microwaves the sensation is reported as a buzzing, clicking, or hissing which seems to originate (regardless of the person's position in the field) within or just behind the head. The phenomena occurs at average power densities as low as microwatts per square centimeter with carrier frequencies from 0.4 to 3.0 GHz. By proper choice of pulse characteristics, intelligible speech may be created. Before this technique may be extended and used for military applications, an understanding of the basic principles must be developed. Such an understanding is not only required to optimize the use of the concept for camouflage, decoy and deception operations but is required to properly assess safety factors of such microwave exposure."

Hi there !

I'm using MDT monitor 1.5.1 and the only frequency in NYC that i am able to monitor
is 855.4625 (EMS) .
What about all the NYPD MDT freq , the whole 484,xxxx are busy with MDT transmitions. I am not able to decode none of them .
What seems to be a problem , different system ?
What about FDNY MDT freqs ?
if anybody knows please give me all the freqs you know for FDNY and EMS.

If anybody needs , NYPD MDT freqs, please email me and i'll be happy to send them
your way .

Thank You for your response.

Yeah, they really are nice folks to do business with--just ordered a 2000 Passport from them a couple of nights ago. They sent me an immediate e-mail confirmation of my order and then another e-mail the next day to verify the thing was shipped.

I've bought quite a few things from them over the years, and stopped by in March to pick up a SP200 Sound Enhancer while I was vacationing in the area. While they're not really set up as a retail store they got one of the tech guys to get one out of a box and demonstrate it for me--nice touch!

After I got my Sat700 from them some years ago I was so pleased that I wrote them a letter of appreciation, detailing some of the old boat anchors I'd owned over the years and reminiscing how nice radios had become. I got a nice note back from Bob Grove himself saying that he'd also owned many of my oldies but goodies, even had a new Gonset G-76 transceiver like the one I use to own. Nice folks, indeed!

I have two wide coverage (0.1-1900mhz) radios in my truck (Ford F-150XL)

I am considering constructing an antenna array. Anyone ever tried this ?

probably need an antenna fror the 0.1-30mhz (long wave and shortwave), then
one for 118-174 (VHFand 2meter), one for 400-512 (uhf and 70cm), and one for
820-950 and higher

The kicker is that this has to work while the truck is in motion on a freeway
at speeds up to 90mph. I don't go over about 80 but if everythinhg will worj
at 90mph, tht will account for any
sudden wind gusts.

Actually, a well engineered digital system works quite well. Perhaps the local officials who signed-up for a crappy contract are really to blame. They could have insisted on performance criteria to make sure the system worked or the vendor buys it back. Thats the way most of these systems get sold into larger cities and counties. That way Motorola or Ericsson are on the hook, not the user or the agency.

Message-ID: <38A3758B.8A1777E4@worldnet.att.net>
Source record: 94330

Had a bad experience with Optoelectronics in Florida. My wife ordered me a surprise birthday present from them, when I opened it, it was not the Explorer that I was expecting but something called the CD100 counter/decoder (it was what my wife thought I wanted but she didn't ask me so as not to ruin the surprise). The next business day she called them, Kevin there said she could send it back and would not be charged the 25% restocking fee (which they don't tell you about until you read it on the invoice after you purchase it) so she shipped it overnight and they got it the next day. A week later, the credit card bill showed a credit minus 25%. When my wife called inquiring about it, she spoke with a very rude woman who said she was the owner, and told her that she was the only person who could waive a restocking fee and she would not do it. This cost us $100.00, plus $40.00 in shipping back and forth, for simply looking at the product they sell. I've purchased a Scout 40, OptoLinx, Band Pass filters, antenna packs, etc., from them over the years but they have now lost my business. Anyone else have any similar experiences with Optoelectronics? Sorry if this seems off topic but I've seen references to this company's products on this group.

3891. Imported Scanners - What's the Scoop?

Source record: 94331

OK, I've been seeing ads in magazines selling FULL COVERAGE scanners sold from places like Canada or the UK, where there are no silly laws covering what radios can receive. They invariably say GUARANTEED DELIVERY.

What's the scoop? Is this for real? Is it just a matter of calling an 800 number and waiting for the mail to come in? Has anyone really gotten an unblocked scanner this way? If so, did you have trouble with the law? Has anyone gotten busted this way? Do the authorities really enforce this stupid law enough to search every parcel coming into the US and checking the spec's to see if it can recieve illegal frequencies?

- braindrain

It is the same problems they had back in the 1970's with the then new scrambler systems---someone does a snow job of selling the "new" technology, which is never tested fully in the field until it is paid for--because you can't test it until you set it all up. The taxpayers end up footing the bill for a pile of junk that should have never been purchased.

Rick: My experience was positive. They did warranty work on my Scout 40 by replacing the mother board and battery. No charge except the shipping and done fairly quickly. They also called me prior to doing the work to discuss the problem. It may depend on who answers the phone there.
Steve, WZ7E

Is there any geostationary sats transmitting anything at 800-1300MHz,
beacons...telemetry.. what ever.
It would be great for testing my directional antennas and preamps.
Thanks

//Ash

Funny ... I just asked this question. It is against the law, buy you can do it. All you get is the Cell frequencies. Not worth the risk in my book.

That would be, International Hot Rod Association.

HQ for IHRA is Norwalk Raceway Park, Norwalk Ohio, however all I'm able to find are the raceway logistics freqs (food/bev, security, event coordination etc.). I'm looking for the actual IHRA track official's frequencies (safety crew, starter, track maint, etc). I have the NHRA freqs, but I don't think they're the same.

Thanks.

I purchased a PRO-26scanner used from them a couple of years ago. Very happy with them. From the postings they seem to be responsive to people who have problems. This is the kind of merchant I like to do business with. I will pay a few dollars more to support them because of their service. Hopefully they will not be nickled and dimed out of business. I also like to pick up their Monitoring Times mag several times a year to stay current with SWL broadcast schedules. ((PS I paid $170 for the PRO-26 2 years ago and I just saw one on Ebay for $190 - God! Is this a great country or what?))

Definitely contact an attorney and find a way to pay
the fine.

Otherwise it may well mean a bench warrant will be issued
in that State, which could prove rather embarrassing
for years to come.

I spent a few hours looking through ICOM dealer websites a couple weekends ago,
looking for the best price on the ICOM R2 wideband receiver.
Grove had the best price.
And I ordered through their website, and days afterwards, I called in an order for
Monitoring
Times magazine. It turns out that the same person who sent me email acknowledging the order
took my phone order also. I still have an Excel spreadsheet showing all of the dealer's
prices
for the R2 and accessories if anyone is interested.

> of commitment. Wow!! Enough said?

If he's like the rest of us in the US he probably has a service contract that states that if he looses his phone he's responsible to get a new one and continue his service within 45 days or default on his contract and pay $175 for his basic phone.

This happened to me. I was in a store and lay my cell phone down on the counter and sure as shit within 30 seconds a female welfare collecting, crack sniffing, breeding like a roach, thieving porch monkey decided to steal my phone.

Cellular One, my cell carrier, wanted $175 to replace my Nokia 5120 or pay $175 for breach of contract. Luckily I was able to find a brand new 5120 for $100 and Cell One added to my plan for free.

Be easy on the guy. That free phone you talk about isn't really free. Depending on which model he bought that phone may have been a good deal for that model without a service contract if the phone was new as stated. Take a look on ebay and see what some of them idiots are paying for used items. Make you wonder? Enough said?

> I have two wide coverage (0.1-1900mhz) radios in my truck (Ford F-150XL)

I have an ICOM 706 to cover 160 meters to 2 meters. (1.8 mhz to 150 mhz.)
and a Kenwood 741 for 222 and 440 Mhz in my F-150 XL.

I use several antennas (Total of 5.)
You can not expect any real performance from an antenna on a vehicle on the
frequerncies
below 7 Mhz.

Fortunately, I think your just receiving, so you can get by with non resonant
antennas.
So just use a long whip.

> I am considering constructing an antenna array. Anyone ever tried this ?

I built "Frankentenna" for the low frequencies from a Schedule M 3/4" copper
pipe,
8 ' long on a military ball mount AND a LARGE coil covered with a popcorn can,
AND a 4 ' whip on top. It has to be guyed! Don't try to erect this antenna and

drive 55! (Your likely to cause accidents from gawking just driving around
town.)

I find that Burghardt, which also provides superlative service, usually has better prices than Grove. Burghardt has the R2 for $189.95. Grove is currently offering it "on special" for $189.95. On the other hand, Grove has a much lower price on the PCR1000. Both sell the R8500 for the same price (at the time I bought mine, Burghardt was selling it for a few hundred less than Grove).

Check out www.strongsignals.net he has a review comparing the R2 with other radios at spot frequencies along its range. It should tell you where the R2's strengths and weaknesses are.

FYI, mine is so deaf below 27MHz that I've yet to pick up a shortwave radio station! But on most other bands it out performs my other scanner (Pro2005).

I recently bought an item from Grove that I was not satisfied with.
They cheerfully and quickly refunded my money.

Thant's why I've been buying from them for some 10 years now.

Well i alredy have the camera that sees through clothes (sony nightshot early model with fiter) and the trojans
The e-commerce is doomed to failure in my book, wide open for criminals just wait and see !;-)
Wirless communications...YES PLEASE all the more for us radio decode enthusiasts in the future, i could make your bath water 120deg just before you get in it ;-)

Virtual reality, hmmm yes i can see the vegitated kids of tommorrow with that crap !.
computer implants...yes another reason for learning the art of making b0mbs for delivery to your local governemnt !

Most of this is hardly tech terrors..damm useful actually just your usual press hyped, dont know what they are talking about report.

I've been a Grove customer since 1983. I've only had a problem
once, in 1999, when I ordered the 2000 Passport and it arrived
with a bunch of pages missing (printing screwup obviously). They
promptky sent me a new copy.

Everyone,

I've updated the Southeast US Trunked Radio Information homepage with quite a bit of new information. Stop by to see the latest information for your area of the Southeast.

http://www.lcblanton.com/trunked.htm

Updates include:

Alabama: Huntsville, Jefferson County
Florida: Added Manatee County, Updated Pinellas County, Hernando County, Brevard County, City of Jacksonville Beach, City of Apopka, Lee County, Coral Springs, Daytona Beach, Added Collier County.
Georgia: Updated Glynn County
North Carolina: City of Durham, City of Cary, Charlotte / Meck County
Louisiana: City of New Orleans, Louisiana State PD
Maryland: Misc updates, Carroll County
South Carolina: SCANA System
Texas: Updated Baytown, Garland, Waco, Plano, Houston Power and Light / Reliant Energy, Collin County, Lubbock, Fort Worth, LCRA System, Corpus Christi.
Tennessee: Updated information on the Nashville ASTRO System
Virginia: Spotsylvania County, Defense Supply Center in Richmond, Fairfax County ASTRO, City of Hopewell
Also updated some links, the trunktracker information page, and other little things here and there!

Warmest regards,

Lindsay Blanton
http://www.lcblanton.com/trunked.htm

Source record: 94122

I have the following for the Regency Turbo Scan TS/2 800 Mhz:
1) Operators Manual
2) Service Manual
3) Mod Sheet that describes scan speed increase, keyboard backlight increase, correct sloppyness in the squelch control and a relay mod to take away the power from the cheap contacts on the volume control.

You can get a Volume Control and other parts from G & G Electronics. Do NOT replace the volume control until you've pulled the ON/OFF Power control wires from the front control. Either control it with a relay or a seperate power switch. The ON/OFF Volume Control has contacts that can't handle the amps going across them and will burn up constantly.

3951. Yaesu VR-500 Software tip

Newsgroup: rec.radio.scanner
Date: 2000-02-12 00:00:00 UTC
From: Kevin Gallagher <Kevinga@ix.netcom.com>
Message-ID: <38A5A1B0.799149B8@ix.netcom.com>
Source record: 94128

I just bought a Yaesu VR-500 scanner and love it.

I resolved a problem with the software that appears to be undocumented anywhere. This occurred on 2 different PC's The software MUST be loaded in the default directory which is C:\Yaesu\Vr500. If you like to organize your programs in any other way, you'll get an error message from within the application. The error message is obscure and doesn't provide any help. This was resolved by trial and error.

Hope this saves you all some time.

Kevin

Order the crystals through Radio Shack like I do for my Bearcat
and Radio Shack scanners. Make sure the crystal ordered is for BEARCAT
otherwise it won't work in your radio.

The Bearcat IV does NOT contain separate boards for each band as some
have suggested. They are thinking of the earlier Bearcat III instead.

I have several IIIs and IVs in the collection.

go to www.ebay.com and search for scanner in the electronics section, after
you decide what model you want--email the seller to find out if it is
already mod so you don't have to do it and possibly ruin it.
Here is a list of the pre-ban scanners of which I am

aware that should be capable of frequency restoration:

PRO-2004 BC-855XLT *3 Regency 4030

PRO-2005 BC-200XLT Regency 1600

PRO-2006 BC-205XLT Icom IC-R10 *7

PRO-2022 BC-760XLT *4

PRO-2026 *8 BC-700A *3

PRO-2027 BC-890XLT *4

PRO-2030 BC-950XLT

PRO-2032 BC-2500XLT *3

PRO-34

PRO-37

PRO-39

PRO-43 *1

PRO-46 *2 *5

PRO-51 *6

PRO-23 *6

Note 1: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label in
battery
compartment), or no "A" in the serial no. (Date code 3A4 (Mar94) and after
WILL
NOT WORK !)

Note 2: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label on
back).

Note 3: Date of mfg code must not end in the letters "ID" or after. (ID=94),
except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)

Note 4: Date of mfg code must not end in the letters "ID" or after. (ID=94)

Note 5: Units with date code of 5A4 (May94) can tune the restored
frequencies
in 30 kHz Steps using a keyboard entry sequence after a wire on the "newly
attached" daughter board is snipped.

Note 6: Units with date code of 6A4 (Jun94) and prior (and some 7A4) can
tune
the restored frequencies in 30 kHz Steps using a keyboard entry sequence.
After
date code 7A4 (Jul94) no mod can be done.

Note 7: The current 1998 models are. New reports say Icom is now only
importing non-modifiable versions.

Note 8: Model (catalog) number with "B" at the end not modifiable. (Reported
no
L201 jumper on the circuit board)

The below list are those scanners that were capable of receiving the full
800
MHz band,

without modification:

J.I.L. SX-400 AOR-950 Icom R-7100 *

Regency MX-4000 AOR-1000 Icom R-1*

Regency MX-5000 AOR-1500 Icom R-100

Kenwood RZ-1 AOR-2500 Icom R-9000

Uniden BC-800XLT AOR-3000 * Icom R-7000

Yaesu FRG-9600 AOR-8000 *

* pre-1994

Here's some info:

Space Shuttle/Mir Radio Coms - As of: 2/5/2000

(Sarex is now known as the Space Amateur Radio EXperiment)

There is supposed to be no more Shuttle Sarex missions. The ISS will take over once gear and crew on onboard. Frequency info is not yet available. Temporary 2m/70cm ham gear is ready and will go up in 2000.

Some amateur radio 2 meter FM repeaters carry live air to ground coms. Go here to get a list of shuttle freqs around the country:

http://www.amsat.org/amsat/sarex/shutfreq.html

If your in the NYC metro area try the W2FCL repeater in Northern N.J. on 146.610. I pick this repeater up from about 100 miles away easily on an Icom 2000H and a Ringo Ranger vertical up about 27 feet.

On HF, WA3NAN - the Goddard amateur radio club
re-transmits the missions on: 3.860 LSB
7.185 LSB
14.285 USB
14.295 USB
21.390 USB
21.395 USB
28.650 USB

These are dependant on propagation! In South Eastern N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best, I use a G5RV antenna on a TS-450s. They I.D. in morse code and voice. Park on a freq. and listen awhile, coms are not non-stop! There are sometimes long breaks in the action. When the astronauts are asleep they are off the air. If the weather is bad at the station or no control operator

is available they won't be on the air either. This is a volunteer service. Thanks to WA3NAN for providing this service!

Mir is currently unmanned. A new crew of 2 is supposed to be going up in March 2000. Mir 2 meter FM amateur radio downlinks are (were) currently on 145.985. This is for both voice, packet radio and SSTV.

There is a ground control freq. of 143.625 FM that is sometimes used as well, but NOT for amateur radio. I hope you speak Russian!

Mir was also on 70 cm (though very seldom used) with voice downlinks on: 437.950
437.925
Packet downlink: 437.975

Happy listening!

Tom Randall
tprandall@idsi.net (Remove the "P" - to e-mail me)

3976. Re: recording from radio onto PC / And a little about Jammers

Newsgroup: rec.radio.scanner
Date: 2000-02-13 00:00:00 UTC
From: "Todd L. Sherman/KB4MHH" <afn09444@afn.org>
Message-ID: <886pi4$6f4q$1@spnode25.nerdc.ufl.edu>
Source record: 94001

We used to have a ham radio jammer who was an 18-wheeler who affected north Florida repeaters. To record him when he'd travel through our area and affected our repeaters locally, I hooked both my scanner (monitoring outputs) and HT (monitoring inputs) to the VCR - the scanner audio to the L audio input on the VCR and the HT audio to the R audio input; then I'd place a vidcam aimed at both displays on the table, and hook that up to the VCR's video input. Putting scanner and HT on separate audio channels prevented both channels from "noising" (interfering with) each other when things happened on both radios simultaneously. I could also easily hit the audio channel button when I wanted to hear just one side at a time. I used an 8 hour tape to record, then used reports from other ham "monitors" to let me know when and where (at what time) an event had occured. I then could rewind the tape to that point and I'd hook outputs up to the SB card inputs and record what I needed to WAV or RA files. We'd put this, with logs, on a hidden, non-advertised, password-protected web page, and tell the guys at FCC-Tampa when to check it out. And it could be used as evidence.

I liked this method better because it showed the whole day, uninterrupted...what happened before (or not), and after, and it had a date/time stamp. The problem with VOX operation and a tape recorder is that if you want date and time stamping, you don't get it.

What happened to that guy, btw? Well, because we got up off our butts and did something, rather than sitting around and saying "aw leave it alone, he'll go away," which never worked - the guy stopped. He doesn't bother us anymore. No more 4am prank calls using the patch, no more prank 9-1-1 calls using the patch, etc. He affected us for three years, relentlessly. He only stopped when we got active and hunted him. We now know who he is, that he's an Extra-class ham, lives near the Tampa area, has a wife and kids (especially sad), we know where he lives, his truck number, tags, we know his routes now (between northern Fla. and MAYBE even up to mid-Atlantic states along the coast), we have photos and video of him in the act and all the trucks he changed through in the last year of his prowl, etc. Knowing that we know all of that, for him to continue would be stupidity. And, obviously he's not stupid. Tampa? They did nothing (the "aw, leave it alone" types), and they know nothing about this guy...except what we told them. In fact, I think they're _still_ affected by him down there. We're a 150 miles away from them and know more about this resident of their's than they do. FCC-Tampa got far more from _us_ about him than from Tampa ham residents. And you know? ...This guy was SO easy for us to catch, relatively. Unfortunately, because of the mobile and random nature of this guy, the FCC was constantly called home to handle "easier things" (for them) and told to cancel, and they never personally caught him in the act. See, they didn't live here like we did, and so, when the jammer would

come, they'd have to dispatch themselves 150 miles north. By that time, jammer's gone, and the next time he'd appear might be four days later. ...Four days of LD cell phone calls back to the Field Office, hotel costs, sitting in the hot sun hearing nothing, etc. They're not gonna sit for four days like that. They don't have the budget, or the manpower when lots of other interference things are going on simultaneously elsewhere that need to be taken care of. (Bitch at Congress and the Budget, _not_ at the FCC, please. Six budgetted men and two or three budgetted RDFing vehicles can only handle the territory of so many combined states at once - and note that word STATES, not COUNTIES. And no, the Field Offices are not as large as the Pentagon building, they don't have a huge blinking neon sign on top of the building that flashes on and off ans says "F-C-C", there are not thousands of employees ticking away at computer keyboards, and they don't have thousands of RDF antennas on top of the buildings able to pinopoint you in a moments notice [that's only in DC, and then only for HF]. A lot of people seem to have that _impression_, tho.) However, from what we were eventually able to get done ourselves, and the new policy with Riley Hollingsworth jumping into the frey and because of his HF actions showing how serious they were finally becoming, it all scared the jammer enough to make him stop completly. We compiled so much info on this guy that all the FCC would now have to do is set up along key points and bam, he's taken down. If he starts up again, and Riley decides to go VHF instead of HF...this guy's history. And, because of what this guy does, and the wide areas he would affect, we have no doubt that he'd be used as a MAJOR example in sanctions.

Lisa,

If you truely exist then I owe you an apology. If this e-mail bounces back, then I know I'm right about your message being a troll. On the off chance that it is not, then let me suggest you pick up a copy of PoliceCall Plus at your local RadioShack store. I assume you want to monitor the traffic and news helicopters when they're talking to the studio or broadcasting the traffic/news, and that you're not really interested in communications with air traffic controllers which consist mainly of altitude and direction reports. The communications with the studio are very possibly in the 450.000 range as there are frequencies set aside for media use. Get the PoliceCall Plus book and you can look up the specific frequencies used by your favorite stations.

I wrote about PAR Electronics filters in July 1998 Monitoring Times.
Here's a portion:

"...Ok, so the $3 stub filter isn't very good, but you can pay more and
do much better. You can buy a commercial cavity notch filter for several
hundred dollars or a PAR filter for about $60. PAR Electronics, 6869
Bayshore Dr., Lantana, FL 33462, telephone (407)586-8278, manufactures a
new series of intermod filters designed for scanner enthusiasts. Despite
my last name, I am not related to PAR Electronics.
PAR can furnish intermod notch filters custom tuned to your frequency.
I ordered two filters for testing: 158 and 454 MHz filters, models
VHFDN158HT and UHFDN454HT (figure 4). PAR claims the VHF model
attenuates 157.5 - 158.5 MHz signals by 35 dB and the UHF model
attenuates 454 - 455 MHz signals by 25 dB.
They are made in USA of rugged, all metal construction and are fitted
with high quality male and female BNC connectors. They are intended to
be placed inline between your scanner and 50 ohm coax feedline. Each
filter has a small toggle switch which allows you to choose between two
frequency ranges for best performance. For instance, the 158 MHz filter
switch settings are: 0 - 156 and 160 - 950 MHz.
The two screws on the front are factory adjustments and are appear to be
glued. Tinkerers, heed this warning: Don't adjust these screws! ..."

I have a Bearcat 3000 handheld scanner for sale. Good condition. The battery pack was just replaced about 2 months ago. It does not pick up cellular frequencies directly, but you can hear
images upper 900mhz range. I have an extra belt clip, original rubber duck antenna, earpiece
(unused), instruction manual, original box. Works great! I do not have the AC adapter, but I
know RS has them for about $10.

Covers Virtually Every Frequency from 25 MHz to 1.3 GHz - Frequency Transfer - Auto Sorting - Auto Store - Selectable Attenuator - Auto Weather Search - Programmable modes of AM, NFM & WFM - Programmable steps of 5, 12.5, 25 & 50kHz - 400 channels.

Asking $250 (I'll pay shipping via USPS Priority Mail).

Great, yet another misuse of the term "hacker" by the mindless mass
media.

Surely there is already a term for someone who illegally broadcasts on
a police radio frequency?

Note: Spam shields raised (with rotating shield frequencies). Please post responses to
this newsgroup.

Bob and others,
Would PAR be Princeton Applied Research? I've used PAR low noise amplifiers in the past. I think the company spun off from Howard Edgerton, the MIT professor who invented the strobe light and high speed photography, amongst other things. PAR also made boxcar averagers and
other exotic scientific equipment.

An interesting post, but I'd like to make a few observations:

Your Org is set to the Southern Poverty Law Center, which doesn't have an exactly sterling reputation of truthfulness in its own right, at least in my experience. However, your From and Reply indicate sclc.org, which is the Southern Connecticut Library Council (according to a whois search). Other info (Message ID, X-Complaints) indicate you posted through Earthlink. I suppose the question should be who are you--really?

Now given all that, and the fact that this Militia Watchdog, which a project of one Mark Pitcavage, who is apparently funded in his work by the Federal Government (in specifc, the DOJ, according to his site), it seems that the reportage on the "right-wing militia movement" is not really going to be even-handed.

All that said, would you care to explain just exactly why we should take you or any of this information seriously? It smells like propaganda to me--and I don't buy that from either right, center or left.

All you could want for pocsag is at www.eavsdropper.dabsol.co.uk, it is a windows program that will decode most pagers (pocsag/flex/golay) but you will need an interface (cheap and easy) to connect it to the discriminator out put of your radio, if you dont want to get an inerface then use poc32 a windows prog that ONLY decodes pocsag pagers and can use a sound card as the interface but you will still need a discriminator tap from your radio

Up to five users at one time, all from one standard dual phone jack.
Supporting up to two outside phone lines, this system allows you to place up to eight cordless handsets throughout your home or office, all operating off the corded desk station and a standard phone jack. Unlike other cordless products, the desk station and up to four of the cordless handsets may be used simultaneously.

Multitasking,
The Gigaset 2420 offers all the tasks a small office or busy home demands from the desk station and each of the handsets. LCD screens that handle Caller ID* and Caller ID on Call Waiting*; Speed dial/redial, etc.; Call restrictions; Handset paging; a room monitor feature; A remotely accessible digital answering machine that answers separately for each line; A Smart Fax/Modem Port** and much more.

Superior Reception and Security,
The system's 2.4GHz frequency and high-speed digital voice encoding provide reception that is superior to other cordless technologies and almost indistinguishable from corded phone systems. Frequency hopping spread spectrum technology ensures unparalleled security.

And More Asking $300.00 + $10.00 Shipping includes extra charger & shipping Unit Retails for $379.99+ Tax

Yes, Mambo Kid.
I just double checked my spreadsheet, and Burghardt & Grove were both $189.95 for the ICOM R2.
I still have the spreadsheet around if anyone cares to see it. Prices on the R2 and accessories.
I don't have shipping info, although Grove was $12.00.

4013. ICOM R2 PC Programming

Newsgroup: rec.radio.scanner
Date: 2000-02-13 00:00:00 UTC
From: "Al, N2NKB"
Message-ID: <T%op4.6730$LC4.178195@bgtnsc04-news.ops.worldnet.att.net>
Source record: 94062

Hi folks,
I have built a PC interface for my newly acquired ICOM wideband receiver, the R2. The schematic is here:
http://www.butel.nl/
I also loaded the R2 programming software from the site.
So here is my problem:
I can transfer data from the rig up to the PC, and it works fine.
When I try to transfer data from the PC to the rig, it clears out the memory, and then an error message
shows up on the rig's LCD display.

I have checked the interface very thoroughly, with even the a TTL generator and a scope. Seems to work fine.
I have tried playing with my COMM port, ie. slowing it down, but no luck so far.

I would appreciate it if anyone else could share their experiences here. I have either a bad cable, a bad
rig, or bad software. Unfortunately, I cannot swap out anything without purchasing.
Al

Al,

I had that problem too, but after successfully transfering data both directions a few times.
The problem turned out to be an ivalid frequency in one memory location. Double check your frequencies in all memory locations.

I hope that's all it is.

Jon

in my area (ca) I have 145.530 and 445.530. If you know how to do limit searching on your scanner, search around these frequencies. There is a continuous 'open microphone' when the shuttle is in operation. Your scanner will stop on whatever freq. is used in your area (make sure to turn the squelch at its most sensitive level)

In NAZI Germany they had an "official" radio set to RX a single
channel. If you were to break the seal or modify it in any way
the penalty was DEATH. With all this emerging technology the
Klintonistas only want you to know how to push the buttons on
all the wonderful little black boxes and to dutifully pay all the
little ALGORE surcharges. They don't want you to have ANY
inkling on how the innards of these wonderful gadgets work or to be
able to build anythingof your own. QRP homebrewing is
becoming a big thing. Perhaps soon we will have to "register" our
experiments with the FCC and obtain type acceptance on
everything that xmits. An INGNORAMUS is a socialist/democrat's best
customer

Poor coverage, for the most part, is not a digital/analog issue. I would guess the issues here is the commission who put together the radio specification. I woud guess that if you pulled the RFP for this system, the commission called for mobile instead of portable coverate. The system gets designed with coverage based on 35 watt mobile units and the officers try to communicate using a 5 watt portable. Then who get's the blame? Not the city government but "new technology". It becomes a "snow job" of selling new technology issue instead of a poor planning issue. Check the facts!

>ANOTHER Stupid quote from "Tony":
"the penalty was DEATH. With all this emerging technology the Klintonistas only want you to know how to push the buttons on...."
We WILL lose more of our monitoring freedoms if morons don't stop "trying" to make these restrictive "scanner laws" into a partisan issue. Back in the Reagan/Bush years when the Cellular Ban was conceived & went into effect "democrat" scanner buffs blamed the republicans, now people are trying to blame "democrats. The REALITY of the situation is that these laws have always had Overwhealming support from both sides, the bills have been sponsored & co-sponsored by people in both parties & the cellular & other lobbies that want these restrictions know that. They must love when someone uninformed idiot tries to blame it all on Newt Gingrich, Clinton, Bush, or ted Kennedy or "whoever" , because that will ensure Monitoring hobbiests will never unite in a bi-partisan way to defeat these laws....(the way congress has done to pass them...)

I didn't read that that way. For his use of the word "contributions" I
saw in my mind "articles, stories, etc."

This really isn't too bad an idea, I think.

To get it some publicity advertise it in all the top search engines, and
put it in the "Top 50" and "Ultimate Scanner" top scanner site lists.

Come on, do you really think that the feds would set up a sting operation to nab some poor stooge who wants to buy an unblocked scanner? I doubt it.

Anyway, it is so easy to buy unblocked scanners from overseas dealers that it just isn't worth talking about. The risks are slim to none that the scanner will be intercepted. I had one come through that US Customs didn't bother checking to see if it was legit or not--all they wanted was a $45 import duty!

If you regularly use the AC adapter then check the solder connections at the power jack. Quite often the solder breaks away at the pins and the power can't get to the on/off switch.

Too bad you cant be forward thinking like some of the others ive seen...the hobby of ham radio is DYING pure and simple...the enticement of the no code license for techs did not pull in people by the droves it was expected to. However now with upper class licenses easier to get and the ability to talk all over the world hopefully that will draw em in. Heck even the military had enough forsight to eliminate CW from its operations. Cw has its place for sure and i fault no one for their opinions on it but its past the time when high code proficiency should be a factor for obtaining a higher class license.

Well, I think it's more: **** "Anybody stupid enough to join me?"****

If you don't like what's happened, why not work within the system to make sure the standards are upheld and what better way than by continuing to serve as a VE?

Besides the multiple-guess exams that have been the norm for so long are a joke anyway. New exams might actually be better exams but anything that's multiple-guess is a joke!

And you can't accuse me of being a newly licensed individual who is anti-CW. Yes, I must admit I went two weekends ago and passed element 4B with one wrong so I can turn it in after April 14 to upgrade to Extra. However I could, just after I upgraded from Novice, copy 25 wpm but needed a typewriter to be able to get a minute or two down on paper with no errors. I never really enjoyed CW that much but did operate 40 and 15 meters as a Novice which is a good way to build one's speed. By the time Extra existed I had been not using CW for so long that my speed stuck around 10 wpm and goes up to 15 wpm when I use CW for a few hours a day for a week. I upgraded to Advanced many years ago before the exam was a "fill in the blanks" exam.

I was licensed nearly 10 years BEFORE YOU WERE EVEN BORN! And some think it's us "old f*%#s who are against recognizing that times change and we have to adapt to them or the world will pass us by. I guess YOU are the one being passed by and you're no older than my daughter!

Get with the times and live in the real world rather than what you wish the world would be!

And yes, I choose NOT to post my identity. LIVE WITH IT - I get tired of flames not posted for the whole world to see and SPAM.

kd0gd@juno.com (John Keith) wrote:

>- What application is best to use for recording from a radio?
> (Would like some thing with a VCR type of timer, multi-events)

Like you, I wanted something like a VCR for radio shows. I wanted it to record directly to MP3 files - in real time, during the recording process, not compressing a .WAV file after the fact - in order to save disk space. The closest I found was MusicMatch Jukebox: it can record MP3s from the soundcard line in in real time but unfortunately it has a lot of bugs, the worst of which is its limited recording time. I tried recording a 4 hour show; MMJB acted like it was recording, but what wound up on the disk was only the first two hours or so - the rest was silently discarded. It also doesn't let me select between my two audio cards (I have a RipOff - er, I mean, RipTide - card that came with the computer, and I also have an Echo Darla for high quality recording; MMJB defaults to the RipTide and cannot select the Darla) - Irritating as all hell! Plus, although MMJB has a delayed-record feature, it lacks multi-event timer capability, and of course it has no ability to control my Cadet Radio card or any of my computer-controlled scanners so recording multiple shows at different times and/or on different frequencies is out of the question.

Finding NOTHING that did exactly what I wanted, I ended up writing my own. ;-)

>- Would like an application that compresses that audio as much as
> possible to allow several hours of recording while minimizing
> disk usage (lower quality audio is probably acceptable)

I have found that 96kbps MP3 is just fine for FM radio broadcasts.
This allows for a pretty kick ass compression ratio.

>- Ability to playback audio at an accelerated rate to allow shorter listening
> time

Sorry, I've never heard of any software that can do that.

Note: Spam shields raised (with rotating shield frequencies). Please post responses to this newsgroup.

Rick,

Thanks VERY much for posting this. I have ordered from Opto in the
past (I have a Scout 40, an OS456 Lite, and an Optolinx) but never
knew about the bullshit restocking fee (fortunately I've never had to
return anything). IMHO there's NO excuse for a restocking fee when you
have no opportunity to try the equipment out before you purchase it.
Are we all supposed to spend hundreds of dollars sight unseen and take
it on faith alone that the product will meet our needs? Sorry, Homey
don't play dat game.

Sorry, Opto, you've lost my future business, as well, until/unless you
change this ridiculous policy.

Hey, clean up that scanner! I am amazed how grimy these things are when I buy one used through the mail. It takes me an hour to find the scanner in all the filth! Get an old toothbrush and clean it! Wipe it up like it was new! Take a toothpick and carve the cheese and ketchup out of all the little grooves, man, it's disgusting! And hey, when you are selling your scanner, if the letters are worn half off, some screws missing, and the case has cracks in it, don't be calling it "Excellent" condition--call it good, or be truthful and say, hey, busted up filthy scanner but it STILL works! Thank you , I feel better after getting that off my chest.

What if this Second Amendment case reaches the Supreme Court and they rule against the "Individual Right"?

MY COMMENTS: Congress can restore our Second Amendment gun rights such that we can travel the 48 contiguous states of this country in our privately own vehicles with a firearm without the necessity of a CCW license, without fear of arrest for possession of a firearm. Congress has the power. Congress should and must use it to restore our constitutional right to keep and bear arms openly in public.
==========

QUOTED MATERIAL:

The U.S. Supreme Court is not the final word. There are two ways to overrule the Supreme Court:

(1) Reversals of Supreme Court Decisions by Amendment of the U.S. Constitution.

(2) Reversals of Supreme Court Decisions by Congress.

With (1) Supreme Court decisions that interpret provisions of the Constitution can be overturned directly only by amendment. Article V of the Constitution provides that amendments can be proposed by two-thirds majorities of both houses of Congress or by a convention that Congress calls at the request of two-thirds of the state legislatures; amendments must be ratified by three-quarters of the states, either by their legislatures or by special conventions. All successful amendments thus far have been proposed by Congress, and all but one (the Twenty-first, ending Prohibition) have been ratified by state legislature.

Of the twenty-six amendments to the Constitution, as many as seven can be interpreted as overturning Supreme Court decisions. The first such amendment was the Eleventh, adopted in 1795, which overturned Chisholm v. Georgia [2 Dall. (2 U.S.) 419 (1793)], by restating the immunity of states from lawsuits in federal court. The Thirteenth Amendment (1865), which prohibited slavery, and the Fourteenth (1868), which ensured that blacks had the right of citizenship, in effect overturned the Court's most infamous decision, Dred Scott v. Sandford [19 How. (60 U.S.) 393 (1857)]. The Sixteenth Amendment (1913) gave Congress the power to levy an income tax and therefore negated Pollock v. Farmers' Loan and Trust Co. (1895). In the most recent instance, the Twenty-sixth Amendment, adopted in 1971, overturned the portion of Oregon v. Mitchell (1970) that held that Congress could not require the states to set the voting age at eighteen in elections to state offices: the amendment itself

lowered the voting age to 18. The Nineteenth Amendment (1920), which prohibited the denial of the vote to women, and the Twenty-fourth Amendment (1964), which prohibited the imposition of a poll tax as a requirement to vote in federal elections, superseded decisions that had upheld these practices under the Constitution. A great many efforts to overturn other decisions through amendments have failed.

Although no amendments have yet been proposed by convention, in a few instances several state legislatures have petitioned for such a convention to overcome a Supreme Court decision. After the Court's decisions of the 1960's requiring that state legislative districts be reapportioned on a "one person, one vote" basis, the number of petitions for a convention to consider overturning those rulings fell only one short of the thirty-four that were required.

With (2) the Supreme Court interprets the meaning of a provision in the Constitution, its decision can be overturned directly only by a constitutional amendment. But decisions interpreting a federal statute can be overturned simply through the enactment of a new statute, so that Congress has a relatively easy means to reject the Court's reading of statutes.

This congressional power is important, because the Court devotes a large share of its efforts to statutory interpretation. In the 1988 term, according to data presented in Harvard Law Review (November 1989, p. 401), in only 44 percent of the Court's decisions was the major issue one of constitutional law. The Court's work in such fields as labor law, antitrust, and taxation is concentrated on the interpretation of federal statutes. Thus Congress stands in a stronger position vis-a-vis the Court in these fields than in fields where constitutional law plays a more prominent role, such as civil liberties.

A substantial majority of the Court's statutory decisions attract little attention in Congress. But bills are introduced to overturn or modify a significant number of them. The impetus for such bills can come from several sources. Individual members may be unhappy with the Court's reading of a statute in a policy area that is of special concern to lthem. More often, interest groups will press for legislation to overcome decisions that run counter to their interests. In fields in which strong groups exist on both sides, such as labor law, Court decisions that favor one side significantly often attract reversal efforts by groups that represent the opposing interest.

Occasionally, the Court itself invites Congress to overturn a decision by suggesting in an opinion that its reading of a statute requires it to reach an unfortunate result. In Westfall v. Irwin (1988), for instance, the Court limited the immunity of federal employees from lawsuits. Justice Thurgood Marshall's opinion for a unanimous Court strongly suggested that Congress rewrite the law, and within a year a new statute was adopted to supersede the Westfall decision.

Most bills that are introduced to overturn statutory decisions fail to become law. Indeed, in some instances opponents of a Court decision introduce bills to overturn the decision several times without achieving success. This has been the case thus far with legislation directed against Feres v. United States (1950), which limited the right of military personnel to sue the federal government for medical malpractice. The fact that only a small proportion of Court-reversing consensus that it is inappropriate to reject Supreme Court rulings on statutes. Unlike amending the Constitution, rewriting of a statute often is viewed as a routine matter rather than a confrontation between two branches. Rather, these failures reflect primarily the difficulties involved in enacting legislation.

These difficulties notwithstanding, it is not uncommon for Congress to adopt legislation that reverses a statutory decision altogether or in part. During the 1980s, reversal legislation was adopted on such issues as the allocation of military retirement pay in divorce settlements, thedamages that foreign governments can collect in antitrust cases, alteration of labor contracts by companies that have filed bankruptcy cases, and overtime pay for employees of state and local governments.

The routine character of most such actions is reflected in the lack of attention given to them. This is particularly true of obscure fields of law; in 1984, a successful bill to overturn a 1972 decision concerning rules for patent infringement went almost unnoticed outside of Congress and the patent community. A striking exception to the general pattern was the campaign to overturn Grove City College v. Bell (1984), a decision that had applied a narrow interpretation to laws prohibiting discrimination by business and other institutions that receive funds from the federal government; the Court held that only the part of the institution that discriminated was prohibited from receiving federal money. Acting at the behest of civil rights groups, Congress in 1988 overrode a veto by President Ronald Reagan and overturned the decision after a long and well-publicized battle.

This battle underlines both the significance of the Supreme Court's statutory decisions and the importance of the congressional power to overturn them. Through use of that power, Congress helps to maintain for itself a continuing role in the development of the law on statutory maters.

EMERSON CASE 99-10331 NOT FOUND!!!
http://www.ca5.uscourts.gov/caseinfo.HTM

EMERSON OPINION NET POSTED YET!!!
http://www.ca5.uscourts.gov/opinions.HTM

I don't know why the Emerson case is no long available at the 5th Circuit Court of Appeals Web Sight. I can only assume two possibilities:

(1) The Emerson Web Page (case info) is taken down for updating at the time I checked it.

(2) The court has ruled on the case and the Web sight might be preparing to post the opinion.

WARNING: I am only speculating! Do NOT spread rumors based on this message. Check with the Court for official information.

The 245 will not display that info on the screen. If you make a connection to the discriminator (soldering required) you can hook up a data slicer circuit and then feed that to your computer running Trunker.exe. Your computer will show you more than the dispatcher sees on their console. No scanners (PC controlled or not) display that information without a data slicer circuit and special decoding software like Trunker.exe

I have a Realistic Pro-34 scanner and it will not come on. I have fresh batteries and even tried plugging it in with the adapter, but it doesn't work.
Took the back cover off to see if there was a disconnected wire on the on/off switch, but everything looks fine.
Any ideas on what to check?

Thanks,
Jim

Yeah, that's right. Put your 800 MHz, EMI-leaking, Made-in-China, Windoze-sucking computer, with its irradiate-the-world-to-death, high-clock-rate-video monitor, right next to your scanner and see what's left for you to receive. Meanwhile, anyone really serious about leaving the RF spectrum uncontaminated so that it may be monitored, might be tempted to use an 8 MHz reflective-screen palmtop to control his scanner. There is simply no room for Windoze anywhere in that scenario.

Add to that, the twenty or thirty seconds of battery life on your average Windoze-capable notebook, the fact that an old used DOS notebook can be had for $50, the fact that my feeble little anachronistic DOS program can do real-time trunk control channel decoding on a 386SX-20 and the fact that DOS programs just happen to run under Windoze anyway, and the case for writing this code exclusively for Windoze becomes rather weak.

Your assertion that I should compromise the purpose of my program by requiring it be run on a machine that obliterates the very signals it was created to capture is further proof that the evolution and enforced use of Billy G's Pointy-Clicky Monstrosity have been mostly driven by pure ignorance.

And just so you will know, there is no skill required in programming for Windoze. It is all research (surely there must be a function somewhere that does this), guesswork (what the hell is SecondThingyBFDPtrPtr, anyway?) and copying routines somebody else already spent three months swearing, throwing things and waiting on terminal Microshaft Tech Support hold to create.

4096. How to reset microprocessor AOR AR1500??

Newsgroup: rec.radio.scanner
Date: 2000-02-14 00:00:00 UTC
From: Dan <Danny@Tebenet.NL>
Message-ID: <889ftq$ck6$1@porthos.nl.uu.net>
Source record: 93976
Cross-posted to: alt.radio.scanner,aus.radio.scanner,free.uk.scanner-radio,rec.radio.scanner

I own a AOR AR1500 handheldscanner,the type with no jumper/reset switch in
the battery
compartment.This type with the switch is easely to reset.
But i have the type(older model?) with no jumperswitch,and there is no
possible way to do it without opening
the case and look for a jumper (i assume).
I read an article about a simular method for a AOR AR1000 by shortening some
diodes.
How and what i have to do in my case???

Any help is welcome.

Thanks in advance.........

Even though our government calls this practice illegal, many people do it. In fact, there are people who work for our government that are paid to listen to these conversations, and you can't tell me that they don't "use" the information they hear for their own personal gain from time to time.

In addition, I have met several people over the years who are hired by big companies to listen to other companies portable and cellular phone conversations, better known as corporate espionage. This of course would net the "listener" in several thousands of dollars (and I doubt (s)he uses the money for the betterment of their hobby).

I agree, watch out for a sting operation! However, if you (or anyone else reading this) are really intent on buying "unblocked" scanners, just take a little vacation to Canada and visit a Radio Shack there. With the money conversion rate the way it is now, you can get a nice full range (no blockage) scanner quite cheap. When you come back to the states, just say "nothing to declare" and you're in. I know many, many people that do this and then sell them (not a real bright idea in my opinion).

Well, yes, you said that, but it still doesn't answer the
question: All current models? Some past models? Handhelds?
Desktop/mobile only? Surely you (or whomever) has a prototype
built -- it's more than just a breadboard project if you want to
make it a product. It has to get power, fit within the case, tell
the CPU to stop scanning, etc.

> dont know if U wants to market it

Not likely -- they're too cozy with the "wrong" people...

> developers are approaching several vendors to distribute it and to help produce
> it $
> the winner HOPEFULLY will be announced in MAY? the board is the first portable
> application...thier have been others in the past who have used service
> monitors/computers to make it work

Yes, but none who have made a viable product, but rather a
"one-off" for their own use. Is there an actual company (name pls)
that is working on a product?

> oh and regular DES has been done on a very fast consumer computer - but not in
> real time ....yet DES-xl not yet

Yes, this is not news. But there's a difference between a successful
cracking project and a product that can be installed in an existing
receiver or new receiver. That product, btw, would be illegal as
hell, immoral, unethical, and probably fattening. Count me out on
the latter, but I still want more info on the former!

Try
http://www.eavsdropper.dabsol.co.uk/DOWNLOADS/SOURCE_CODE/source_code.html

They wrote a POCSAG decoder and also have source for many other
communication formats.

Thanks for the info everyone!

I know it's illegal and these ads make it look real easy to become a criminal. Still, whatever risk there is seems to be anecdotal at best.

So, no one out there has ever had any trouble trying to order a scanner from abroad? Some one stop me before I get in trouble!

Thanx again,

- braindrain

4125. CALTRANS - Did You Hear?

Newsgroup: rec.radio.scanner
Date: 2000-02-15 00:00:00 UTC
From: echofoxx@aol.com
Message-ID: <20000215024459.22407.00003572@ng-fh1.aol.com>
Source record: 93844

I was given a list of 800mhz. frequencies supposably used by California Department of Tranportation (CALTRANS) in the Monterey/Santa Cruz /San Francisco area of California. Well, it rained like crazy here over the weekend and NOTHING was heard from ANY of the freq's. I was given, even though CHP and the news services talked about CalTrans being on-scene, needed at, or heading to various locations, some of them close to me, I still heard nothing.
I even tried their 47mhz freq's, but nothing their either.
I suspect I was given incorrect information. What is, or where can I find the correct frequencies?
Thanks for your help.

4126. Re: CALTRANS - Did You Hear?

Newsgroup: rec.radio.scanner

Source record: 93845

Funny you post this .....I recently found (while searching 800's) 2 Cal trans channels in Redding, Ca. area. I confirmed transmissions that were on 800-'s and 47.10 at the same time. I also hear the CHP dispatcher monitoring (after hours or when Cal Trans dispatcher is off duty) and talking too. 859.7625 and 857.9875.
Hope this helps.....
Eric G.

**********snip, snip**********

Sorry to disagree, but......
Doesn't sound like a problem with Grove
at all.
It sounds like you ordered two of the same item from two different
vendors and Grove got it to you faster than you expected.
You should have cancelled your 1st order before placing your second
order.
That's all. And that's not Grove's fault.
Grove is better than just a 'good' company as the comments

on this newsgroup continually suggest and I wouldn't say they are
'slipping in the polls' either.

I guess since Vince will be turning in his VE accreditation, I will
go and get VE accreditation after April 15th when I get my 'Extra".
There will be some of us that will try to preserve amateur radio.
Don't feel that the 20 wpm is a show stopper. I do feel that the
FCC should have set it to at least 10 wpm for Extra but that is
water under the bridge and now we all need to ge 'along'.

Ham radio is only as good as you make it. Doing what you are doing
is not helping amateur radio.

David

> Scanner listerners are not computer hackers.

They aren`t, huh ? Guess again.

The scanner listeners were
> around long before computers were on the store shelf.

Yup. I WAS around "then". I also bought a Vic-20 when they first came out.

But our hobby is
> endanger.

Another doomsayer. Well, you are not the first. There is still plenty of stuff to hear, if you are inclined to dig for it. You have to first stop thinking that Public Safety is the entire world of scanning. Hardly. There are aircraft, airports,military aircraft, National Guard,railroads, etc. I could go on for another two paragraphs. They are encrypting Public Safety because they don`t like being put under a magnifying glass. And it is getting harder to find folks who want to be cops, that have the neccessary intelligence to get the job done without breaking the rules. Think about the myriad motivations that make a person want to become a cop in the first place, He might be the high school bully, and want to carry on with that as a profession. He might be the kid who was getting beat on all the time in school, and want to become a cop to "get even". Some people are controlling S.O.B.`s, and they want to take control to it`s ultimate, and try and "control" everyone they meet. Up here in the backwoods, we have had cops that became cops so THEY could break the law with impugnity ! We have had cops that were child molesters. Nice sheep`s clothing for the wolf, that badge..... We have even had cops that were murderers. We had the State recently have to pass a ruling that the cops cannot "fool around" with anyone involved in a case, including the family of the person arrested ! (If the cop took a liking to your wife, he would proceed to railroad you, and then fool arouhnd with your wife, telling her that it would "go easier on you if she did, etc".) If she wouldn`t cooperate, then they would wage a vendetta against the whole family ! I sat right here and listened to them discuss it, right on the air ! Of COURSE they don`t want you listening to this sort of stuff. They feel that it gives the police a "black eye" in general. How about when one cop gets another to break into a guy`s garage at night, so they can search the vehicles. No search warrants here ! Like the cop said to the other guy, "I got my search warrant right in the car here, a big pry bar and some bolt cutters".....How about cops who deal drugs? I have heard this going on from time to time ! They will even sell drugs to EACH OTHER ! How about the two cops who decided to claim they never recovered the 800 dollars from a burglary, and keep it for themselves ! It is perfectly

clear why they want to encrypt everthing....They do this instead of weeding out the bad apples. It is easier. They can legitimize their requests to run a "secret police force" in many ways. But the fact is, it serves it`s purpose, in keeping you from hearing what the cops are REALLY like, and what they are UP TO....

If things continue the scanners that we listen to will be useless
> and nothing will be heard.
>
>

Maybe he's afraid that they'll make him TAKE one.

Hmmmm . . .this is a good idea. Maybe we should require proof of
current 20 WPM code skill before we let anyone whine about
restructuring.

How about it, Vince? Care to provide the date of your last successful
20 WPM exam?

For Sale: Motorola Saber I VHF Radio w/accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=260444596

Factory ID - H43SAN7139AN

Radio Specs:
12 channels
6 watt output
146-174Mhz
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
Antenna & Radio programming terminal protector
Two (2) New High Capacity Batteries
Remote Speaker/Mic w/earphone jack - NMN6166C
Motorola Rapid Charger & Conditioner - NTN4734A
Motorola Leather Swivel Holster/Case w/strap
RIB Programming Cable (not shown)
Saber RSS Programming Software (not shown - you must have the necessary licenses to use it)

This unit is in excellent shape (10 out of 10 cosmetically) and is guaranteed to be in 100% working condition. All included accessories are genuine Motorola parts (except RIB cable) and in excellent condition. Selling because it is not needed anymore. I've been told that this package is worth over $1500! Reserve price is VERY reasonable. If there is not enough interest in this as a package, I will resell the items individually. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=260444596

Radio Shaft used to sell a "VSC" (Variable Speech Control) cassette
recorder. It would speed up the playback speed while lowering the
pitch proportionally, so the speeded-up speech remained reasonably
intelligible. This effect could undoubtedly be duplicated in a digital
player with the appropriate DSP algorithms.

Hey Vince,

Don't let the door hit you in the ass on the way out.
You'll rethink your position when you see Ham Radio come
alive again. The sales of rigs will be going up, and when sales
increases manufacturing increase and prices will drop.

Dropping the code is the BEST thing to happen to our
hobby.

Oh yeah, I didn't give up my P.E. license when the slide rule
went the way of the dodo after the HP35 came out. I just take pride
in knowing that I entered the field when number crunching wasn't as
easy as pushing buttons ... AND .... I don't think any less of my
younger peers because they had programable calculators.

Your logic is fuzzy.

My city of Akron, Ohio is digital. I listen to the railroads, airplanes and other cities that haven't gone digital. It is just not the same. Many of my friends who once listened to scanners have put them up for sale. There is little hope for a digital scanner to be developed in the next few years. Unfortunaely, digital radio has killed scanning in Akron. It has probably killed, and will continue to kill, the hobby in many other cities as well.

And just how does this concern shortwave listeners in
rec.radio.shortwave?

4157. EAVSDROPPERS GOING...WOULD LIKE TO THANK....

Newsgroup: rec.radio.scanner
Date: 2000-02-15 00:00:00 UTC
From: eavsdropper <ian@eavsdropper.dabsol.co.uk>
Message-ID: <38A99BA8.B6C5B7D3@eavsdropper.dabsol.co.uk>
Source record: 93876

I have unfortunately decided to go offline for the forseeable future or at the very least until British telecom introduce their planned one-off ï¿½36 pound per month bill payement for unlimited net, I can no longer afford the 3-400 pounds per bill it is costing me to run Eavsdroppers and do it's work behind the scenes. That along with the lack of help from people in this scene in making new free decoders just no longer makes it worth while.

The other reason is that I need to spend much more time enjoying my wide and great hobby myself along with the family, the amount of time I spend on here is nuts :-), I hardly ever get to really use all my gizmo's and I must get some new equip too !. (Richard you better have a discount this time ;-)

I would like to give a HUGE salute to the VERY few who gave their time to code software, help with Ideas and experiments and of course sent in mails of support when I had the odd crisis it is these few people who this whole scene should acknowledge and give great thanks to, all those who make freeware like our winflex (the coder knows who he is ;-). and other coders that made packages like Edacs, Trunker, Etrunk, mobitex, banpia, Wacars, AGW, Softrep,ermes, and more... are an example to the scene and without them a whole lot of people would never have been able to get into this hobby because all we would have had left is over-priced bloated buggy crap decoders and software that nobody can afford but the few .commercial coders TAKE NOTE !!!

I do hope that this B.T thing goes through co's then I can start afresh with some great ideas I already have but cannot afford to do, I will not "sell out" and go all "squeaky clean" so I can get adverts on my site or sponsorship from manafacturers as that is not my way of doing things..if we all did that this scene would be dead already because they would pull out whenever a new and "dodgy" decoder was released on the site!.

This decision is nothing to do with the sh*t I always get from "certain people" about the decoders, or harrasment from certain manafacturers of pagers etc, etc, etc. No I have not been busted for anything,

Eavsdroppers was here to host the so called "dodgy" decoders and to try and help make some that others fear to do, along with helping coders to beta test , communicate with each other and help make upcoming decoders "behind the scene" with the full safety of anoniminity and freedom of harrasment and persicution from "THEM" ...I got all that sh*t instead :-), it has been useful for our U.S friends after the scare with Winflex but for now you will have to scrape around for it once the site has gone(i'm sure someone will host it) It is currently at v1.03 on my site and due to the coder having another project and me going it

probably won't get changed anymore, if someobody who has the hobby at heart wishes to make more of it...go for it and all the best to ya !.

As a last point to the newbies, the ungrateful and some brain dead people a quaint and rythimic helpful rules list........

RULE 1: Before e-mailing a free software decoder maker with obvious or dumb questions that waste their time , use what is known as a search engine or a newsgroup and take the time to look and ask others for yourself instead of the lazy option (you will learn more along the way) and they will have more time to make the decoders instead of answeing the same silly or obvious questions !.

RULE 2: If a freeware decoder is not quite to your liking, feel free to make comments in a polite manner or offer support and advice, DO NOT moan, complain and snivel at the end of the day it's cost you nothing, it is better than nothing and if you are still not happy PI*SOFF !

RULE 3: NEVER moan about the way someone has made their scanner site if you do not have your own one that is far superior in design and content. At least they have made the effort!, this is a major sin and makes you look like a right one !. Statistics prove that most complainers have either no website themselves and small willy's or a web site that is crap and even smaller willy's :-)

RULE 4: NEVER post results of your decoder onto the net in a public place (sites, forums, newsgroups etc) this is VERY harmful to the hobby and brings very unwanted attention to it (remember the Bill cheek sags !).

Too Anni and Lindis, hope the March on March 4th goes well.....power too ya and screw the U.S gov
tell them from me to stick S.O.S.W and Menwith up Clintons arse along with a cigar :-)!!.

Have a good one, seeya again in the spring I hope if B.T get their fingers out of their bums.

it will be interesting to see what decoders comes about while I am away...hope i see some new and good stuff !!

PS. I will be online probably until the end of this coming w/end and the site will probably dussapear after a month (I may get a friend to keep it alive though while I am away keep an eye on it !.

EAVSDROPPER

Con fecha del 6-11-1999 ingres&#65533; en la cuenta 0104-0307 0304165951 de estos se&#65533;ores, si as&#65533; se les puede llamar la cantidad de 3000 pts (o lo que es lo mismo18.03 ?), bueno aunque hoy con 3000 pts no se va a ninguna parte, pero y&#65533; quisiera yo que 200 personas me hiciesen un ingreso parecido. Esta es la fecha que no he recibido nada, ni siquiera una carta diciendome que ya era socio y bla, bla, bla.

&#65533;Habran subido al Columbia a ajustar el phase 3D? o &#65533; ser&#65533; que se han hecho con la pasta y ma&#65533;ana ser&#65533; otro d&#65533;a?

No se que pensar, la verdad que mala imagen la est&#65533;n dando....

Por cierto le envi&#65533; un mail al Sr. AL Quiroga supongo que lo de AL ser&#65533; de AL CAPONE, presidente de AMSAT-EA y nada de nada....esperaremos un par de meses m&#65533;s y si no contestan a saco con ellos.

Perdon a todos por el rollo pero para que lo sepais todos de que pi&#65533; cojean estos...si alguien sabe algo, le estar&#65533;a muy agradecido me comunicasen algo....

```
Un saludo a todos.

In doing a discriminator tap to a Pro-34, I went by the instructions and

tapped IC-101 pin 9. I don't hear anything at all.

I did the discriminator tap to my Pro-2042, works fine.

Anyone have any ideas?

Thanks,
Jon

4164. A little trick ? for AR5000 users

Newsgroup: rec.radio.scanner
Date: 2000-02-15 00:00:00 UTC
From: eavsdropper <ian@eavsdropper.dabsol.co.uk>
Message-ID: <38A9DE00.46C59CD5@eavsdropper.dabsol.co.uk>
Source record: 93883

Just a quickie, because the soft CPU reset does not delete EVERYTHING !.

READ CAREFULLY !.......and refer to your AR5000 RS232 guide if you are
not sure, you can get it also at the AOR web site (www.aoruk.com).

In Hyperterminal I have used the following settings successfully...

connect using : direct to com*

under settings tab......
terminal type: Ansi
backscroll: 500

under ascii setup......
tick line ends with line feeds
tick echo locally
set line and char delay to "0"
tick append line feeds
all others unticked !

Before using this it is advisable to backup your memories and search
banks to *txt file so you can easily upload them all again after
delete...Unfortunately the silly little peeps who designed the 5000 only
allowed it to list 10 memory's at a time so the only way is to use the
command..

MA* (*=bank number) (lists10 at a time)

....and turn on the text capture under the transfer menu in
hyperterminal, after listing all the memories in all banks open the text
file and clean them up a bit so it should look something like this...

MX100 RF0137620000 ST001000 AU1 TMNOAA14
MX101 RF0137500000 ST001000 AU1 TMNOAA15
MX102 RF0137400000 ST001000 AU1 TMOKEAN
MX103 RF0137301000 ST001000 AU1 TMMETEOR
MX104 RF0137851000 ST001000 AU1 TMRESURS
MX105 RF0137798750 ST001000 AU1 TMFENG-YNG
MX106 RF0137400000 ST001000 AU1 TMOKEAN 0

Obviously these above reset the memories according to the auto bandplan
method, you can manipulate them accordingly.Keep a close eye when you
clean up your text file and make sure the bank numbers (after the MX)
are in order (it's tidier that way) this is the bit that takes the
longest time intially but once done it is done !.

To backup your Search banks it is easier....
Use this command......

SR** (*=bank number)

List all through 00 to 19 and capture to text file so they look like
this...

SR11 SL0167000000 SU0174000000 ST012500 AU1 MD0 BW3 TTVHFPMR2
SR12 SL0216000000 SU0223500000 ST012500 AU1 MD0 BW3 TTM3*
SR13 SL0335400000 SU0399900000 ST025000 AU1 MD1 BW3 TTMILAIR
SR14 SL0433000000 SU0440000000 ST025000 AU0 MD0 BW3 TT70 CMHAM

NOTE: Change te "SR" command to "SE", this makes them ready to
re-upload at any time by copy and paste !.

DELETING STUFF !

To delete ALL of your 2000 scan memory's use windows Hyperterminal
program (8,N,2 9600 baud) and copy and paste the following to host
(AR5000), don't forget to leave the blank lines between the last "mq"
command and the "bn" command further down (it seems to like it more).
when this is complete it will have deleted all your scan banks on prom
bank0 and auto switched your ar5000 to prom bank1. then paste the "mq"
commands again.

MQ%%0
MQ%%1
MQ%%2
MQ%%3
MQ%%4
MQ%%5
MQ%%6
MQ%%7
MQ%%8
MQ%%9

BN1

To delete all of your search banks do the following...

QS00
QS01
QS02
QS03
QS04
QS05
QS06
QS07
QS08
QS09

QS10
QS11
QS12
QS13
QS14
QS15
QS16
QS17
QS18
QS19

BN1

Just incase you need to quick delete everything ;-)

Takes under a minute to delete all 2000 scan mems and 40 search banks
(quicker if you are in a rush ;-)

regards

Eavsdropper

WOW What a thread!

I have sat here and read every post and am still laughing in my head over some of them. Some of you have come up with some really creative ideas and that is great!!! That is what this NG stuff is all about. I am glad to see it still works. I personally am newly licensed in Amateur Radio, but have been around it for about 15 years. I however am not new to the internet and it is great to see these long threads where although we had some negative ones most of them were positive ideas for Vince.

I have to agree with many of you on the restructuring of the Ham License. Shit happen, times change, deal with it, and move forward in your life sir. You are almost 37 years old and acting like a child. What's next, going to your room and throwing a temper tantrum? I really think you need to reevaluate your priorities in life.

Keep up the great threads.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120

Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the

scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models

are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

Apr 30 (Sun): Galva, IL - W9YPS Hamfest, Area Amateur Radio | Operators club. Galva National Guard Armory. Morgan Rd. | Admission $5. Info: Phil IMes, WD9IRE, kewphil@cin.net or | Bill Anderson WA9BA, bill@inw.net

MAY 2000

May 20 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

May 28 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

JUNE 2000

Jun 4 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at

gate. Talk-in 146.955, -600, PL103.5 Hz. info: AL Erbrederis, tel. 1-815-498-9675, 262 Easy St., Somanauk IL.60552. ERB.N9PIB@juno.com. http://www.qsl.net/w9mks. E-mail: w9mks@qsl.net. (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 11 (Sun): Wheaton, IL - Six Meter Club of Chicago. http://cyberconnect.com/orion/smcc.html. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 630-963-4922 or 708-442-4961 . Email: wa9rij@mc.net

Jun 24 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jun 25 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

JULY 2000

Jul 8 (Sat): Oak Creek, WI - South Milwaukee ARC. American | Legion Post 434, 9327 South Shepard Ave. Admission $5. | Talk-in 146.52 MHz. Info, call (414)762-3235. |

Jul 9 (Sun): Peotone, IL - Kankakee Area Radio Society, Will | County Fairgrounds. I-57 to Peotone exist 327 (East). Free | parking. Talk-in 146.94 MHz. http://www.w9az.com. Admis- | sion $5. Info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. Tel: 815-939-7548. Email: k9nr@juno.com

Jul 15 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Jul 23 (Sun): Sugar Grove, IL - Fox River Radio League. Waubonsee Community College. Admission $5. | http://www.frrl.org/hamfest.html Info: Maurice Schietecatte, W9CEO, 813 Cindy Lane, Sandwich, IL 60548. Tel: 815-786-2860. Email: w9ceo@arrl.net (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2000

Aug 12 (Sat): Quincy, IL - Western Illinois ARC. http://www.qsl.net/w9awe. Info: Jim Funk, N9JF, PO Box 3132, Quincy, IL 62305-3132. Tel: 217-336-4191 . Email: jfunk@adams.net

Aug 13 (Sun): Peotone, IL - 66th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $4.00 in advance with double stub, $5.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Christine Mack, PO Box 2161, Oak Park, IL 60303. tel. 708-358-1786, email: christine1@mediaone.net. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 19 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Aug 27 (Sun): Danville, IL - Vermilion County ARA. Info: Gary Denison, KA9SKS, 14704 East 2750 North Road, Danville, IL 61834-5610. Tel: 217-759-7389 . Email: gdenison@danville.net

Aug 27 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. http://www.w9uvi.org. Info: Jim Williams, N9HHU, PO Box 3508, Peoria, IL 61612-3508. Tel: 309-692-3378. Email: jimn9hhu@juno.com

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Admission $8, good both days. | Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel-

videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa | National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz | repeater. http://www.gwltd.com/hamfest |

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest & | Computer Expo. Allen County Amateur Radio Technical | Society. 2000 Indiana ARRL State Convention. Allen County | War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM | EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking. | http://www.acarts.com |

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer
expo. The event is held on designated Saturdays from 9:30
AM to 3:00 PM. This show features computers, supplies,
games, parts, software, accessories, CD-ROM, monitors,
diskettes, printers, keyboards, modems, disk drives, cables,
expansion boards, services, etc. Lake County Fairgrounds,
Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall
Building #1=9720,000 sq. feet. For a show map, exhibitor
info, and discount coupon, visit the web site at
http://www.ccxpo.com.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report | includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or | $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information

is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the

channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75

recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel

pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found

during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my

shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

character in the right margin.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report | includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or | $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few

birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM

antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes.

See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto

store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service

Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in

the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very

fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique

frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base

versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken

around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet

available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are

provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-

channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are

unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit

diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report | includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or | $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

with the scanner OFF, hold down 2 and 9

While holding the 2 and 9 keys down, turn ON the scanner.

When the CLEAR light stops flashing in about 8 seconds, release the keys.
The scanner is noe cleared.

Optoelectronic's owner e-mailed me today informing me she was refunding the entire amount of my wife's mistaken purchase. They had initially charged a 25% restocking fee, even though an employee said he would waive it under the circumstances. They have redeemed themselves in my eyes and have confirmed what I had always thought, that they are in fact a good place to do business with. Thanks to all who replied to my message, and thanks, Optoelectronics!

I would like to trade these radios for a new Uniden SC200 or for a used bc3000xlt? email me for particulars and if interested

gca11716@flash.net

thanks
gregg

What's your problem? The Novice written exam is being merged with the Tech exam so now it will actually be harder to get a beginner's ticket" then it was under the old system !! As for the code, if somebody wants to 'go fast' they'll learn it on their own because they like doing it. The 5 wpm code requirement is there because of international treaty obligations and the fact that if everything else breaks you can still communicate with somebody world wide with Morse Code. You don't have to be a speed demon to do that.

Thank you for your service as a VE. What you did was and is important and luckily there will be somebody to take your place.

73 Bill

Hi
snickers Wanna give up your station too while you're at it? I know some guys that would love to get into the ham thing who can build a hell of a radio antenna or even work on a radio and do it right but stumble on the code and if you gonna throw in the towel because they want a chance to learn cw and ssb ops at a modern pace for todays world then by all means leave the equipment too when you give that last test score to whoever takes it .I say that because of this... with the new requirement you are not willing to let people in because they don't conform to your standards so why be a ham when they show up regardless of your views? :) Or do we prefer to be elitist tonight ?
Just a thought
Chris

It would seem to me that doing this would be pretty straight forward. The player simply needs to throw out 20% of the data to get a 20% speed improvement for example. I realize that some data is lost but for just conversation recording the loss is probably not significant to maintain content of the material.

Unfortunately, GROVE has been slipping lately, and their service just
"aint what it used to be!"

I can speculate as to what may be going on, but basically, it seems
like the right and left hands are not gettin together there any
longer...

I ordered an item, and got an E-mail stating they had "oversold" the
item. It wouldn't be avaliable for 2 to 3 weeks.

So, I went to another vendor and they had the item in stock for less
money. this other vendor is also very reputable.

I informed Grove of this matter only to be told that the regular
person handling these matters was on vacation, and a temporary
replacement stated in error that the item was not in stock when it
actually is in stock, and had been shipped! Sheesh, now I had two of
the same items enroute from 2 different vendors.

I realize GROVE is in N. Carolina, but didn't know it was in
Mayberry! That is just real sloppy business.

Plus, in the past, Bob himself would've taken a personal interest in
such a fiasco. This time, so one even seemed to care.

Needless to say, the item from GROVE was refused.

Basically, a good company, but slipping in the polls...

Vince...

Don't let the extinct morse code keyer hit you in the rear on the way
out!

I doubt you'll get much sympathy on this in a scanner group.

These new rules are a breath of fresh air. Now, if we could eliminate
code altogether, I would gladly visit the old keyers in a musem ,
where they belong.

I must admit that I got really PO'd at the League when they appeared to get behind incentive and refused membership for about 20 years. I discovered they didn't care and I missed out on a pretty decent magazine.

Now to the real problem...I am sure you actually believe that the Code makes us better hams. If that's true then I support your stand. But, I can't help thinking that you are just too set in your ways and refuse to roll with the punches.

Listen Bucky...the stupid Morse is finished and I say good riddance. By the way I was trained in the military and can still send and receive in excess of 35 WPM, I can often be found sneaking around the CW sub bands working really exotic DX... without the usual pileups and DX net BS that you find in SSB.

Haven't you begun to realize that the new crop of low code Hams will have no interest in our CW sub bands and they will leave us to work all the really cool DX without the usual QRM that you find on SSB. Think this thing through and you will realize that the "real hams" (defined as those who know CW) will have exactly what they want...an exclusive window without interference. Think back when hams had calls like 7ADL and you could hear the whirring noise of the rotary spark gap transmitters...nice, big bandwidth, no interference...when real hams made their own equipment. I wonder what those guys would say about your rice box...not a real ham is he?

Now, when we die off and the CW sub bands go into disuse, the FCC will reallocate the CW to something else. Meanwhile, you and I will be trying to communicate with the living by tapping out Morse on the nearest cloud. Gee, I hope my granddaughter can copy CW.

It doesnt take "guts" to CUT AND RUN Vince!
Maybe your dodging an investigation.
Seems to me that your volunteer service
would be needed more than before.
Bottom line, if you would regroup, retract
your decision, continue your service, and announce
it on this forum, then sir, that would be "guts" and
you would be respected by many of your critics.
What ever your course, thank you for your
contribution.

Take this for what it's worth Vince (KB7ADL) I am a veteran Submarine Radioman with plenty of code background. The hobby is changing, I think we sometimes have to take 1 step back to take a few forward. And if this is what we have to do to keep the bands we have, from losing them to leo's , or any other entity that has outgrown their pants like the Federal Government. I think it is a little sacrifice we have to make. I under stand some of your feelings. Your services as a VE Will be missed, and your QSO's. We all have our opinions on the subject I am sure, but we radio guys need to stick together. Or the Washington politicians will police us to death. I Respect your views and the views of the "New Blood" and welcome both of you into any QSO. Hope to "Shoot the Bull" with all of you one day. Lets stay united, not divided. We cannot be touched united, but easily shot down in washington by some pencil pusher if we get divided this easily. Please stick around, how will we know what the past was like and keep a little of the old with the new If you leave.
Happy Hamming. And hope to Catch all of my fellow hams on frequency one day!

All Right Andy!

I guess some people just won't give up, grow up, and move on. But
at least this shows there are HAMs ready to step to the plate to take
over for the people you'd probably rather have gone in the first place.

And to the 'Bill' that left. Good bye! Hope you get over the emotional
loss. And good riddance. Makes me wonder if you were any good
as a VE in the first place.... Who knows, right? Good or not, you're
not the kind of person I would feel proud about representing my hobby
to potential new entrants.

Mike

4203. Re: Pro-34 Discriminator tap?

Newsgroup: rec.radio.scanner

The only thing I use my Pro-34 for now is the discriminator. My wiring is not permanent yet, so what I do is open the case, and connect to the white wire that runs from the squelch to the plug near the center of the board (I usually just stick the lead of the cap into the plug, wedging it between the white wire and the plug). I've never had any problems with this route, and this is the route I will take when I make my connection permanently.

: And perhaps later at the Supreme Court on a future appeal.

Baloney. Why should you be able to carry a _consealed_ weapon (like a gun) in your car/truck. It's no different than carrying it under a trenchcoat (yes, read into it all you like). In fact, why do you think people get blown away in a fit of road rage? It's because people like you carry these weapons and think they they can use them however they see fit. Well, buster, there are consequences for carrying and using a weapon, and you better get used to them.

If you save the web page as a straight HTML page (not a "complete" web page) and open it up in Word 2000 you can literally do anything with it as a "table", in fact it's even better than Excel. On the other hand you could also do a "copy" of the selected portions of the web page and "paste" it into any version of Word and manipulate it since it will paste in as a table. I do it in word since excel tends to be unpredictive in the "number" area. Once it's in word you can also convert the table to text and vice versa. Why stop at Excel when you may as well sned it to Access and use it's power. anyway there's some ideas for you to play with. Incidently if you use the gullfoss menu selection for lat/long/service the output display is a perfectly formated page including frequency (but with lots of place "zeros" that have to be deleted).....just use the radius around a known antenna location (it MUST be an antenna location that is in the FCC database to work right!) and you'll get everything that's in the FCC database for that area......enjoy....

I believe it was the same person, but I'm not positive. The tone of her e-mail was very conciliatory, and she explained that it has been their experience that people will "rent" their products and return them used, therefore they are obliged to charge the restocking fee. My biggest concern there was not being advised up front about it, although one reader pointed out that it is displayed on the web page. I have recently read that Grove sells quite a few of the Optoelectronics products and they have a 15 day return or refund policy (thanks, jnooney@albany.net), which is certainly better than Opto's, but they are probably better able to re-market their returns. Thanks for your comments!

If you want the junky phones they give you with the service
contract...sure. If you want a decent phone (7760 or 7860 etc.), you have
to pay extra for them...so $200 may be a very good price..depending on the
phone.

Ordered an item from Grove.

They said they didn't have it. OVERSOLD, whatever that means.

I looked elsewhere, found item, and ordered it elsewhere.

Went back top Grove, told them above, and they said, OOPS, we already
shipped it.

I said, WOW, you said you didn't have it, OVERSOLD.

They said, OOPS, boob we had working in place of regular person
thought it was OVERSOLD, but it wasn't, so we shipped it, but didn;t
tell you .

Hhmmmm, does that clear things up?

Why cancel 1st order from Grove when they told mne they wouldn't have
it for 3 weeks? they had OVERSOLD it?

None of the above is Grove's fault?

Yes, they are a good company, think I said as much, BUT, they have
been slipping lately.

Some will say you're paranoid but I won't. A friend of mine told me he used to live next door to a prostitute. He said there was police there all the time.
One day the whore's husband beat her up. Then the cops beat him up.

We used to have a crooked cop here. Now he's the Prosecutor. Wonderful!
Now he works hand in hand with social(ist) services to steal children.

No doubt they don't want us to know what they're up to!

Bill K9KZ

>Oh boy,another "liberal" BS guy yammering about this CW nonsense!The
ARRL -FINALLY- woke up and saw that CW isn't what it used to be,about
50 years too late,and that their(ARRL'S)"great experiment"-incentive
licensing,has been a total disaster.Even they admit what was wrong with
it,taking priviliges away (from the Generals)is always a mistake!The
incentive change in 1967(?)directly caused a huge number of ham stores
to go out of business.Look at a CQ or QST from before,and a year or two
after,about half the stores are gone!Yeah,maybe the ARRL wants to sell
radios and books,but there has to be hams to buy them!I wouldn't mind
them making the written test a lot harder than it is and will be,BUT,
make CW just a part of the exam that can be FLUNKED,and you can still
pass the test if you ace the rest of it.
If there are no NEW hams,then there won't be ENOUGH hams later on,
and if there aren't enough,there goes spectrum.......

Someone may have them here but most cable companies are not security concious so you'd probably have some luck if you called their office and asked for someone who deals with their radio gear.

woolybulle@aol.com (WoolyBulle) writes:
>I was wondering if all scanners have the cell phone blocked in them.
>can someone help me with this?

It depends on the manufacturer.

With Yaesu amateur radios (many of which can be used as scanners, since they have scan functions and wideband receive), the Canadian models are exactly the same as the USA version - cellular blocked.

Icom builds different versions for USA and Canada for *some* radios. The R2 handheld scanner and (I think) the PCR1000 computer-controlled scanner are unblocked in the Canadian version. But the Q7, which is identical to the R2 in many respects, is the same in both Canada and USA - blocked.

Both of these manufacturers also sell additional versions of these radios intended for Europe and/or for Far East countries like Japan and Hong Kong. They will generally not have cellular frequencies blocked.

But you have to check each model of radio - there is no general rule.

Dave

That`s nothing ! We got a cop right here in the county that is a CONVICTED FELON.

How about when a kid gets busted for a traffic violation over in Mexico, Maine, and they later find him dead in the bushes, STILL WEARING THE COP`S HANDCUFFS ? Know what? NOBODY DID ANYTHING ABOUT IT. The cop who did it was not even reprimanded, and was still ON DUTY TWO YEARS LATER. What is the message here? It is clear. If you are a cop in the good ole boy system here, you have a license to KILL ! The cop who was a child molester I was talking about didn`t even do three months. The average sentence for this sort of thing is 5 YEARS !

Vince:
We respect you for once having gotten the "Extra", and passing 20 w.p.m., plus the theory. That was the requirement, then.

We respect you for having the vision and enthusiasm to help others see the excitement of amateur radio, by serving as a VE. Bless you heart!

You've probably helped your fellow hams and your local community many time over in recent years, and we respect you for that. Many unsaid thanks.

We even envy you for living in such a beautiful place as Yellowstone County. We're talking God's country, here.

So where in the hell does "having the guts to quit" fit into the above picture?

It never ceases to amaze me how folks in amateur radio can gloat over their "forward-thinking" technology, while being stuck in the cement of the past. It's like facing west, then bending down, sticking your head between your legs, and trying to observe the beauty of a new sunrise. No matter how you look at it, your ass is in the way.

So, you have 2 choices. Stand up, and greet the morning, or say, "Goodnight", and move on. Either way, you gotta take your ass out of the picture. If you're attitude is as you truly state it, then you no longer belong in amateur radio. Being a "ham" is NOT about being a code-aholic, a theory guru, or a techno-buff. It's about being willing to learn, teach, and serve, using the marvelous tools of electronics.

I sincerely hope that you take some time, rethink your early years, consider your achievements, contributions, etc., and perhaps the opportunities and unfinished business that still could be contributed by your efforts, and continue on in the fine tradition of amateur radio, or for heaven's sake, just get out of the way, as quickly and gracefully as you can. This is the year 2000, and we're standing up, looking for a brand new day.

Hi

I am looking for a good scanner antenna!!! Looking for the freq. range
of 452.875 - 463.725, BUT also work as a good scanner antenna.
I have a PRO-92 and need it for LTR Trunking system freq.
I saw a WORKMAN HR-12 Dual band HT antenna.....has anyone heard of
that ?

thanks for any help

I have the same problem, Mine seems to have problems with the number 8 and 9 keys, Because those are the banks I turn off the most. If you find the answer let me know, I would like to replace mine as well. I have had mine for 11 years, and it's getting pretty bothersome. I have had the unit apart to clean out the contacts, but this did not improve on it at all. I think it has something to do with the material that is bonded to actual rubber portion on the buttons.

Please return your response by posting in this board or email.
Remove "SPAMFREE" from my email address to respond.
I can also be contacted at ICQ#:33985226

I really don't see how in the world that keeps people from using "CB Lingo" or violating the rules. The best defense against those folks is to ignore them once they've been told not to do it.

I have 9 Relm HS200 handheld scanners for sale, at $125.00 each. They are in great condition and were used with NASCAR during the last season. We purchased these radios for $200.00 six months ago and are selling them because we are using a different system to monitor race comms now.
The Relms come with the original box, manual and all original parts.

Features:
200 Channels, 10 Banks
10 Priority Channels
PL/CTCSS
DPL/DCS
Fast Scan
Scan Delay
Bank Scan
Weather Scan
Priority Scan with Hierarchy
Priority
Direct Channel Access
Search
Search Hold
Channel Lockout
Birdie Lockout
LCD Display

Also, selling a mint condition Icom IC-R8500 communications reciever. Radio is in flawless condiion and has the optional U-102 Voice Synthesizer chip installed. Includes PC control/programming software and serial cable. Purchased seven months ago for $1589.00 -
selling for $1000.00 firm.

Thanks!
John Porter

If one has lots of VHF-Lo activity, Like thge California Highway
Patrol in my Case, the 50/144/440 is a better option.
But if your listening is moslty VHF-Hi and above the
144/440/1200 would be better. Particalrly for Trunking in the 800
area. A 144/440/900 wouuld perhaps be a little better.

Estimados colegas, quiero pedir mil disculpas al grupo de AMSAT-EA y mas concretamente a su presidente Al Quiroga, debido a un c�mulo de circunstancias cre� que habian desaparecido todos, mande correo a ea4lh@amsat.org pensando que era el del presidente y nadie me contest�, intent� conectarme a su gran pagina web http://aintel.bi.ehu.es/~amsat-ea y habia desaparecido, le pregunt� a un amigo (EB5HSC) si �l sab�a algo y me decia que no, que estaba igual que yo....pensando en lo peor puse un mensaje en las news preguntando si alguien sabia algo y all� se qued� el mensaje m�s solo que la una, como casi todos los menajes de las news. Finalmente puse otro mensaje en las news un poco m�s fuerte (mil disculpas again) y por fin se v� que alguien lo vi�.

Hoy 16/02/2000 a las 17:30 me ha llamado EA1BK, tras una larga conversaci�n han quedado las cosas aclaradas. El caso es que ya todo aclarado me ha dado un n�mero de tel�fono para que si alguien est� en el mismo caso que yo, tomen nota :609004514 hablen personalmente con �l.

Bueno pidiendo mil disculpas a todo el grupo AMSAT EA, un saludo.

Salvador C.

JIM

I just got a mvt 7200 and it is great the best I have every had.. I have all my other scanners for sale now. AR8200, R2, AR7000.

The 7100 and 7200 almost the same thing. Looks the same. ez to operate too. Works great with a outside ant too.

You might want to look at this http://www.strongsignals.net

enjoy

Darrel--

This is good advice. I am now going to become a VE to take Bill's place (I have been an Extra for a number of years). BTW, anyone who thinks Jim Haynie--the new ARRL Pres--is a "limp-wristed liberal" has never met the man and would be ill-advised to say that to his face.

Why ? It's up to the transmitting party to keep it un-decryptable if it's so
d-mn secret. Why should this be unethical ? Illegal perhaps under US law,
but I don't find it immoral or unethical at all. If it's in the air, it's up
for grabs. Simple as that.

>and probably fattening.

:-)

>Count me out on
>the latter, but I still want more info on the former!

I wouldn't mind both, especially in a TETRA version when the cops go digital
here.

>telephone calls!

On someone else's _radio transmission_ . What's wrong with that? Only some stupid US legislators bought by the too-lazy-to-go-digital cell-phone industry came up with the idea to make it illegal (ha!) to listen to certain specific frequencies. Silly. If it's in the air, it's up for grabs. Most of these calls are boring anyway, but I can still listen to them if I want to.

Comet and Diamond DO make an active antenna that covers the whole range. I tried one, once and was disappointed, as it was self-oscillating in the 125 MHz area, causing poor intermod performance everywhere. However, you can use almost anyone's active antenna for 0.1 through about 100 MHz (MFJ 1022?). And as others have pointed out, multiband Amateur antennas can do the rest. However, I once used a modified conical monopole antenna with good results for 6 meters, and 100 MHz and above. I took the cone assembly form a RS discone, and mounted it upside down on a modified ball mount on the roof. (Removed the ball and screwed the cone assembly directly to the plastic.) This works well from about 100 MHz through 1.3 GHz. I resonated the cones on 6 meters with parallel inductance to ground, but the active rod antenna will cover LW, MW, HF and VHF low-band OK for you.

======
Your Second Amendment right to carry a gun in your truck (truckers), in your car (road transport) both listening to your radio (radio broadcasting) hangs in the balance at the 5th Circuit Court of Appeals. And perhaps later at the Supreme Court on a future appeal.

If we lose our Second Amendment "individual right" to own and carry firearms what's next? The First Ammendment "individual right" to "freedom of assembly" (truckers and travelers passing through state line police checkpoints?), "free speech" (radio stations forced to air more government propaganda like the Clinton administration has already done with network television in requiring selected television scripts be sent to the White House for approval over the "Anti-Drup Message" content in the scripts."

Wake up an smell the tyranny! It's happening now!

The Tyrant in office is greedy for more power!

Message-ID: <B4CF6D13.180C%rbarile@bbn.com>
Source record: 93891

I have a BC200XLT that I have had for 6 years. The keyboard is showing signs of wear particularly the scan key. It seems a bit mushy and you have to press hard to make it work. Is there any way I can get repair parts for this or is it too old? Is there a scanner out there that is equivalent to the 200XLT. I like the scanner but I guess it won't last forever.

Here is a good reference to Echelon. Take a look at the current issue of US News and World Reports, at the bottom of the third column on page 26, where they admit the existence of Echelon yet AGAIN.
It is operated by the NSA and it`s counterparts, Britain , Canada, Australia, and New Zealand. It is used in Industrial espionage and is also used to spy on each other`s citizens (since spying on your OWN citizens is no longer allowed). Baker, the former NSA general Counsel, said "I`m just not sure the Government and the people will back them up if they get caught doing it".(spying through Echelon). Next time you fire up that cell phone, take a good thought for Echelon. Somebody in New Zealand or Canada may be spying on your cell call for NSA.
I guess there isn`t any doubt about Echelon`s existence NOW, is there ?

And so are each of these "big" in comparison to CW?

> Like I said, morse code is only a small part.

Compared to the total list, yes. Even FM is small compared to the total
list. But CW is certainly not small when compared to AM for example.

What is your point in any of this?

73, Jim AC6XG

Yeah, but I've claimed twice under BAM's policy and the phone I got back
while perhaps used (Actually they were indistuiguishable from new) was
still cleaner than the one I had. Also, I avoid claims against my
Homeowners and Auto insurance policies like the plague because they WILL
stick it to you with rate increases. So for 36 bux a year... BTW, It's all
a write-off anyway ;)

--
By US Code Title 47, Sec.227(a)(2)(B), a computer/modem/printer
meets the definition of a telephone fax machine.
By Sec.227(b)(1)(C), it is unlawful to send any unsolicited advertisement
to such equipment.
By Sec.227(b)(3)(C), a violation of the aforementioned Section is
punishable by action to recover actual monetary loss, or $500 fine,
whichever is greater, for each violation.

Why is there a common misperception that simple possession of a concealed weapon causes a person to turn into a pistol waving maniac? Think about this for a minute: Would having a handgun on your person make you into an aggressive, dangerous person, or would there be a sobering effect at feeling that weight in your pocket? Would having it change you? This is not an abstract question directed at the general population. This is for you. Would it change your behavior, and if so, in what way?

Those of us who've carried concealed weapons do so for very good reasons. It is not a decision that's made lightly, with little forethought. In my home state there has been one incident involving a CCW permit holder since the law was passed 5 years ago. One incident. The man was threatened with a knife and he shot the assailant. To no one's great surprise, law abiding citizens actually obey the law.

Nationally, we kill more people with motor vehicles than with guns. No one has suggested capacity limits on cars. No one has recommended that some cars be banned simply because they look dangerous. Perhaps we should consider the public health ramifications of private automobiles and their owners. Any idiot can (and usually does) obtain a drivers license, and it's more readily obtained than a concealed carry permit. There's little in the way of certification other than passing a simple multiple choice test, and riding with an examiner. Perhaps we should consider raising the legal driving age and make the test more difficult, incorporating some practical driving situations on a simulator. This would make getting a license a much more expensive prospect as well.

But wait! You say you have a right to drive? Can you show me that in the Constitution? I can find the second amendment, but I can't find anything relating to a right to motor vehicle ownership, or a right to use it on the public roads. The state, local, or federal governments could restrict the use of private automobiles at any time, and there's nothing you can do about it. Better get used to it.

My thoughts exactly. Morse code is only a small part of amateur radio.
Morse code has reached it's technical limits. There are other worlds to
explore. Also morse code is more of a talent thing. Some people have
it and some don't.

I forgot to mention that this same prosecutor is a convicted felon. He has been a viscious
criminal since he was a kid. He spent time in prison after committing a brutal crime against
an old couple. He was pardoned by a Republican governor as a favor to a local judge who's
son was the good friend of the criminal. Plain ole justice folks! The reason I know about this
crook is that he tried to put me in prison for forty years after I testified against the Child
Protective Services' corruption here in Madison Co IN. They hired and coerced over fifty
witnesses to testify against me and still couldn't convict me.

> FELON.

Maybe the government could not stop the free speech so they
figured why not flood the bands to stop some of the
badmouthing in the last 7 years.
Why voluntarily give in and be defeated.

A similar type of tactic may have been used in the 60's when
they *supposedly* flooded the streets with drugs to shut down
the Black Panthers.

Sure, if you want to waste $3.00 a month. When my phone was stolen I made a police report and called my insurance company and my home owner's policy paid for it even though it was stolen from me in a store. Pretty good... Same applies with renter's insurance, also. The $3.00 you pay to BAM is wasted in most cases since you probably have that phone insured under a different policy. Oh, and, that $3.00 dollars a month will buy you a replacement phone that is most likely used so don't expect to get a new phone in every instance. This is the same crap the rental car companies try to pull with you when they know you are covered under your own auto policy.

R/S is selling a truck tracker (300 channels) for $179. If you get a R/S credit card you get 10% off.

Is that a good deal? I'm not a big scanner man, but it sounds cheap.

I will undoubtedly use it for 2 days and put it in my junk room, but always wanted a tracker. It's #20-430.

Well, yes, but... I find the difference between receiving scrambled
(*NOT* encrypted) or digitally modulated or more conventionally
modulated signals and truly encrypted signals the difference between
listening to a shouted argument and sticking your head betweeen two
people whispering.

THAT SAID... I wouldn't go around sputtering, "There oughtta be a
LAW!" if someone intercepted and decrypted my message that was sent
with inferior encryption.

Well, the ham who says it is coming is a U. S. ham, so he's probably
basing things on what's possible in the U. S. We'll have to look to

our European bretheren to come up with more sophisticated stuff since
that's all been outlawed in "the land of the free." (God, what a
mess we've made of things over here... I just hope we can fix it, but
I digress...)

Eric

> I was thinking of buying a scanner in canada if the cell isn't blocked.Are
> they the same as the scanners here?

It depends on what you're buying. Some manufacturers ship blocked units
to Canada (anything at Radio Shack, for example) but most ship
unblocked units. The stores in Canada are all within their rights to
sell unblocked scanners but are at the mercy of what the manufacturer
has decided to send them. If you have a model in mind, contact a
Canadian store and ask them if it's cell-blocked. It's not a dirty word
- you can discuss it freely! =)

European resellers (like Javiation) are usually stocked with unblocked
scanners because they're not getting units designed for sale in the US.
I've always found it strange that the UK (for example) has the most
restrictive scanner laws I've heard of, but doesn't require cell to be
blocked.

If you decide to buy from Europe, make sure you get the North American
bandplan (places like Javiation will take care of it for you if you
ask).

Further to my message yesterday I have a close friend who has offered
to
keep the account/site up in my absence, this will allow the decoders
and
info to still be there for download. The person who will keep it going
will NOT be avaliable for e-mails so don't bother sending any to the
eavsdropper account after I have gone on monday.

I hope this helps those who have mailed me asking for it to be kept up.

I have planned a new much bigger site for when I come back with much
more in the way of info and software, with a few more space items in it
too.

regards

And WHY, pray tell , would we have to "Unite in a partisan way ?" I don`t have to be a republican or a democrat to object to these laws, which resemble what went on in the Soviet Union back in the cold war days. It doesn`t matter what we do. Remember, things like Echelon came into being during Klinton`s watch. He loves to spy on the people . Now, they are considering passing a bill that will allow them to spy on your email, and any other communications that you do over the internet !
It doesn`t matter any more. Your privacy has already gone by the board, along with a good portion of your rights. Echelon is up there spying on millions of cell calls a day, while they tell YOU that YOU can`t do it ! They want you kept in the dark. That is what this is REALLY all about. They have controlled the media for years now (Remember, broadcasters have to get their license approved by a government agency !) You don`t cooperate, then maybe your license doesn`t get renewed ! Even the written word has now been "censored" by these people , as they block the flow of technical info and service manuals ! What do you think all this encryption of law enforcement agencies is ABOUT ? If ever there was a "Secret Police" in the making, this is IT. The average citizen (and, I am sorry to say, the average scannist) is totally apathetic, and doesn`t recognize, nor care, that their rights are being blatantly stepped upon and violated by these people, who they keep electing time after time ! They like their little "feel-good laws", it makes them comfortable that they are on the books, they can talk to their girl friend(whenever their wife isn`t around), or make drug deals,etc,etc,etc, and be sure that the average Joe Blow with a scanner can`t listen, at least not LEGALLY. Never mind that the law is virtually unenforceable ! Never mind that Echelon is up there, and every time they utter a "keyword" that Echelon is looking for, their conversation gets recorded ! This does not bother them, since they have been assured by the "trustworthy politicians" they elected that ECHELON DOES NOT EXIST (At least not officially !). I know, I know, they said they were going to "appoint a study" to find out if it exists ! This is the equivalent of them "appointing a study" to find out if they PUT THEIR SHOES ON BEFORE GOING TO WORK THAT MORNING . I wonder if there has ever been another instance of a politician, who didn`t want to answer a question, and knowing that he wouldn`t be in office when it GOT answered, "appointing a study" to get the answer. Gee, let me think .....

They must love when someone uninformed
> idiot tries to blame it all on Newt Gingrich, Clinton, Bush, or ted Kennedy or
> "whoever" , because that will ensure Monitoring hobbiests will never unite in
> a bi-partisan way to defeat these laws....(the way congress has done to pass

In that case, what we need is better enforcement of the bands
and it has been needed for some time now. I'm not sure that
lowering the code requirement will increase the problem.

I believe the FCC is taking steps to clean up bands but only time
will tell if it does any good.

This is pure bugle oil. Here's my vision of what will happen. Since new hams will have no motivation to progress beyond 5 WPM, they will not use CW. (QSO's at 5 WPM are torture!) Inevitably, CW activity will decline and the CW sub-bands will be eliminated (as has happened in Canada and elsewhere). The handful of CW ops will be fighting against SSB California kilowatts on 14010 kHz!

Go to yer local Rat-Shak and ask to see the RSU special order
books. Look in the "communications" book. I think they are listed
in there separately from the other crystals. Bearcat scanners used
a different IF frequency so they are cut differently. The last ones I
bought were 4.98 plus ship.

Cross-posted to: rec.radio.scanner,alt.wildland.firefighting

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Marie Thompson, N6ZFN <n6zfn@thegrid.net>
Bakersfield, CA
I am the ARES/RACES emergency coordinator for Western Kern County.

Bob Dichard <rdichard@prodigy.net>
Amherst NH

I'm a dispatcher for the Hollis Communications Center.We dispatch police, fire, and rescue for two towns with a total population of around 11,000. I'm also on the Emergency Management Team.

Carl R Wilmoth <wilmoth7@bellsouth.net>
Memphis,TN

Looks quite interesting is about all I can say at the moment, as I peruse your materials, I may have comments for the future.

I am an emergency services dispatcher (comm opr II) with the Tennessee Department of Safety Communications Department and dispatch for the Fourth District Headquarters of the Tennessee

Highway Patrol here in Memphis,TN.

.....

>From the Mailbag:

West Valley ARA Announces Web-Based Exam Site

The West Valley Amateur Radio Association (WVARA) is providing public access to its WVExam online Amateur Radio exam practice software. It's located at

http://www.wvara.org/wvexam/

This web-based examination software was originally written for WVARA's New Ham classes in 1996 and 1997. It can be used for all current written exams until April 14, 2000. Effective April 15 the new exam pools become effective, and all exams taken April 15 and later will be based on the new question pools. Until then, though, the WVARA site can be an effective tool for those who choose to beat the deadline by taking upgrade examinations prior to April 15. The following tests are available at the site:

Element 2 - Novice
Element 3A - Technician
Element 3B - General
Element 4A - Advanced
Element 4B - Extra

The software generates a random exam on a web form the same way that the Volunteer Examiner Coordinator (VEC) organizations would. These are from the same published question pool as the actual exams so these are real and effective practice. in addition, WVARA's practice exams can be taken a section at a time as one studies through other materials. (ARRL Pacific Division Letter)

.....

Current Events:

From: "Paul Cavnar" <nn7b@powernet.net>

I have an informational bulletin to post in the ACS newsletter. Your neighbors over the hill to the east are in the process of revitalizing the RACES programs in counties throughout the state. As part of the process of revitalizing the RACES programs around the state, the Nevada DEM Communications Administrator, Mr. Gary Derks, has tasked several of the active emergency radio communicators to spread the word and openly recruit new members in all counties. There have been many new appointments of RACES officers in several counties and all will be participating in activities planned locally and statewide.

Since we have several list members on the ACS list that may be interested in signing on with RACES, they may do so on our Nevada RACES Site at: http://www.cvrc.net/races/ The site is generously hosted by the Carson Valley Radio Club.

You will find a listing of the RACES officers in each county as well as an on-line application they can fill out and send in. It will be forwarded to their respective county RACES officer for processing and contact. Should anyone have any questions about the RACES program in Nevada, they may e-mail me at nn7b@powernet.net and I will answer your questions or find the answers for you.

73 from the Silver State!

Paul Cavnar, NN7B

College Students Wired for Safety
Innovative Device Can Locate Students in Trouble

By Stephanie Kirch

MELBOURNE, Fla. (APBNews.com) -- Some safety-conscious college students in Florida and Alabama are arming themselves with beeper-sized alarms that display their location when activated in an emergency.

Students at the universities of South Florida and South Alabama, along with some school staff members, are wearing new WalkMate alarm units on their belts.

At the press of a button, their exact location will flash on a computer screen monitored by campus police dispatchers.

Schools 'not immune' to crime

Brendan Fitzgerald, president of Microgistics, which manufactures the alarm, recalls that campus crime, especially sexual assault, wasn't much of a problem when he was in college. But now, he said, "every college or university administration wants to make sure their campus is safe."

"You have an environment that is not immune to criminal activity, and you have a fundamental concern on the part of parents for their children who are living away from home for the first time," he told APBnews.com. "They may be walking to their cars alone in a remote parking lot after a night class or working in the library or a study lab late at night. There are a number of situations where our product can enhance existing safety systems."

Device connected to campus police

This is the first year the Melbourne firm has offered the tracking device to campus police departments.

Each device is equipped with three buttons: The red one is a panic button, blue is for medical emergencies and yellow signals the need for non-emergency assistance. When a student presses a button, the device sends a signal to an on-campus radio receiver station. Each station is connected to a campus police department computer on which CampusWatch software has been installed.

On the screen, the police dispatcher sees a map of the campus with a blinking dot corresponding to the location of the person who activated the alarm. The dot matches the color of the button that has been pressed. An audio alarm also sounds to alert the dispatcher.

Cops can be dispatched

Since the screen also displays the location of officers, the dispatcher can quickly identify and dispatch the nearest mobile-response team.

In alert mode, the location of the individual who pressed the alarm button is updated on the screen every second.

The universities pay nothing for the monitoring equipment or the locator units distributed to campus police, and dispatchers who will use the system receive free training.

Students can supply information about themselves to include in a personal profile, including a physical description and any medical condition, such as asthma or epilepsy. They can update their profiles using the Internet; they can even list the names of their dates, including the destination.

But Fitzgerald said the WalkMate is not a "Big Brother" because "there is absolutely no way for campus police to know where subscribers are unless they have pressed one of the three alert buttons."

Students pay a one-time $25 activation fee for the service, then $54.95 per semester. So far, most of the students signing up for the service have been female.

Encouraged to use device

Sherral Cornwell, a secretary for the campus police at the University of South Alabama in Mobile, says she plans to sign up for the monitoring service.

"I'm a staff member and also a student who takes night classes," she said. "I have been on campus at 2 a.m. and have been concerned for my safety."

Cornwell said the campus police department is actively encouraging students to sign up for the service.

The company expects to sell several thousand units between the two campuses this semester and has had inquiries from other colleges, Fitzgerald said. There has also been some interest from law enforcement agencies serving communities with a large number of retirees, he said.

System only works on campus

Sgt. Mike Klingbiel of the campus police at the University of South Florida in Tampa said his department received four reports of sexual assault last year. But, he admitted, "we know that this is a crime that is traditionally underreported."

As part of the program, Microgistics gives campus police departments five free WalkMate alarm units to give to students who report being stalked or who take out restraining orders against potential abusers.

"It's important for everyone to know, however, that this is a campus-only system. As soon as subscribers walk or drive off of campus property, there is no monitoring," Klingbiel cautioned.

Myra Kodner, program coordinator for Pennsylvania-based Security on Campus Inc., which provides rape-prevention and victim-assistance information to students, said she applauds any effort to enhance safety.

'Technology' not only answer

But, she said, "students still need to be educated about prevention and good judgment. What are you going to do if the computer is down or if you lose your beeper? It's not safe to rely totally on technology."

Fitzgerald agreed: "We don't promote our product as eliminating the need to behave in a safe manner. In the user manual for the WalkMate, we remind subscribers to follow common sense safety measures.

"But it does give you peace of mind when you can get help in situations where you could not otherwise get assistance."

EMC224 Statewide Comm Drill 4/5
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC224 Statewide Comm Drill 4/5 For release 2/14/2000

Continuation of a Statewide Communications Drill example

"OPERATIONAL AREA SATELLITE INFORMATION SYSTEM (OASIS) The Operational Area Satellite Information System (OASIS) is a satellite based communications system with a high frequency radio backup. OASIS provides the capability to rapidly transfer a wide variety of informational reports between OASIS user agencies outside of commercial communications channels. In SEMS, OASIS can be viewed as both a communications network and information dissemination system linking three of the five SEMS organizational levels.

OASIS is a primary method of communications within SEMS. OASIS users include, OES State Headquarters, OES Regions, Field Representatives, all Operational Areas and several state agencies. The intent of OASIS is to provide disaster resistant communications between the operational areas, state OES Regions, OES Headquarters and mobile state telecommunications units. The communications component of OASIS does not extend into the local government level of SEMS.

From: Antenna Warehouse <kingpop@cis.net>
Message-ID: <38AE2BF3.6EA7D169@cis.net>
Source record: 93724

Hello,

I have some Stainless Steel element Discone antennas up on a Ebay Dutch auction for $29.95. These are not only great for scanner wide-band receive antennas, but are also good for Transmitting in the Amateur 144, 220, 440, 900, and 1290 MHz. bands. They can also be connected to 900 MHz. cordless phone base units for greatly extended range.

To see them go to:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263652457

This is a Dutch auction, which means no worries about being outbid at the last moment, or the price sky rocketing because of bidding wars. You bid you get one!

Thank you

Gary,
Try the PRO-26 if you're looking for a handheld or the PRO-2035 if you're looking for a base scanner. I have both, like both, and both cover CB. It does come in handy as I'm not really into CB, but if there is a traffic tie-up, I'll quick program in 27.185 (Channel 19) into my PRO-26 and listen to the truckers.

I've been selling on eBay for well over a year and when selling scanners I've found it best not to even say it has the mod. Most people looking for a scanner know what scanners can be modified and they can email you to ask if the mod was already done.

Another trick is to place an email link in your ad something like this:

If you Need to Know the "FULL" Details Please Email me at:xxx@xxx.com

That might work, but in the past I don't do anything and have gotten a good price.

Don't forget the latest status reports on the old geezers gout, eye problems, heart problems and on and on and on. Exciting stuff. And some of the nets where people check in, nobody says anything and it goes on for hour after hour.

One which has some older (but in many cases, still valid) information
for many of the Colorado Ski Areas can be found at:
http://www.geocities.com/CapeCanaveral/9952/ski.htm

Found on AltaVista.com with search string of
+radio +keystone +ski +patrol +colorado

Mike (Ski Cooper's info there is still current ;-)

Hi,

I need to buy a baby monitor, but I don't want my neighbors to hear what goes on in my house. Do they make digital 900 MHz (or better) baby monitors that provide better security than a straight analog transmission?

Thanks!
John

Paragon 1 with RS-232, Geihl chip, general coverage TX, 6.0 and 2.4
filters, may have
FM for $850

OMNI-D series B with WARC kit (not installed) matching PS, 705 desk
mike $325

OMNI-D series A with PS, Turner 251 desk mike $250

OMNI-D series B with WARC, heavy duty PS, Shure 444 mike, 229B 2kw
tuner,
Hercules 444 solid state amp with PS, $1200

253 autotuner $750 take trade in as I want two 238 tuners

WANT 238 antenna tuner- will buy outright

Motorola M75 cellphone that I bought NEW a year ago.

Also have Micro Digital Lite on the 800-900 cellular band which means
that you get to
make calls without dropping out and from longer distances unlike PCS..
I bought it new a
couple of years ago.

It comes with leather belt case.

2 overnight drop-in chargers and 1 Intellicharger fast desk charger

Motorola Micro Tac Lite phone thrown into this package. Works but is
not in service
right
now. Give it to your wife as all cellphones work on 911 by law whether
in service or not.

7 BRAND NEW in package slim Nickle Metal Hydride batteries

2 BRAND NEW Nickle hi-cap batteries

3 used for a year still work good hi-cap batteries

5 used but still good slim batteries

All batteries are Motorola, not some off brand

$400/bo for everything

I will split this package up if you only want some of the things.

I am selling this to get a Star Tac instead. It is in good shape and looks good.

By the way, there is a National Serial Number List that the cell services all look at before
they activate any phone. If you bought a "good deal" at a flea market of from the "guy in
the alley" you can kiss your money goodbye. I bought my phones new so I know it is a
safe one.

Weider home gym cable and weight model. Looks just like fitness club equiptment

This one needs some space to set up as it has 4 workout positions around

it and takes up 25 squre feet just sitting there.

Would go great in garage, basement, extra room etc. Don't plan on sliding it under the bed when you are done with it. It is set up now.

Cost $1800 new and still looks new. No tears in seats and grips look good along with the paint. By the time you wear this one out you'll look like Hulk Hogan!

I am in San Francisco and and can help with delivery and setup. It will go right out my garage door and most of it can stay assembled for the move.

Will take something in trade as I plan to use the room for something else.

$1800 new- sell for only $500! Why pay that much for a new single purpose unit?

Don 415.467.9669 evenings

Motorola Maxar trunking radio that was converted to conventional ham band
use. I want $250 for it since there is a lot of work involved to convert radios to 900 mhz.

TRADE for TenTec gear or maybe some other stuff. Send your list

Patrolaman PRO-78 8 channels Xtal VHF Best offer

Bearcat BC-101 dipswitch programmable 16 channel blinking-light scanner in good shape with manual to program. $150

That's true -- but what happens if they don't email and the winner is then upset when I email at the end and tell him that the mod's been done. That's my fear. Do you share it at all?

The Relm HS-200 covers CB. It costs less than $200.00.

It is this type of elitism that is killing Amateur Radio.
In Europe they long ago moved to less classes under the
CEPT program. And a single code exam of only 10 WPM.

Every since the '70s, with the Bash books and CB, certain
hams have been pissed off that the "masses" might be able
to enter their little fiefdom. It is the same attitudes we
see with gun control. The elite do not want blacks or the
rednecks with guns. Self defense should be left only to those
who are "valuable". (Guns would be just ham radio if we
let the elites have their way.)

Sorry, but the masses have already discovered the Internet.
They do not need amateur radio.

T o all members of the US Senate.

scanning is not lawful at all time it is only ever used to listen to a first party and second party by a thirdparty. The fact is this the first and second party have the right to privacy regardless of weather they be police Joe average or a pilot..

This is a disgraceful news group were people simply spill there guts to everyone including criminal s on how to listen to police to avoid prosecution and even then when they go digital these third parties invade the first and second parties conversation by providing digital to analog conversion via software or hardware.

I fail to see any lawful excuse.

4363. PRO-43 disaster on concrete!

Newsgroup: rec.radio.scanner
Date: 2000-02-19 00:00:00 UTC
From: togepi152@my-deja.com
Message-ID: <88lu63$i9c$1@nnrp1.deja.com>
Source record: 93728

Dear Fellas,

I purchased my PRO-43 in December 1993.
Since then, I have babied it and kept it
immaculate and without a scratch.

Today, it fell out of my hand onto a concrete
floor. I believe the distance was about 4 feet.

Besides a couple of abrasions on the casing, it
still works. But I wanted to know whether or not I
may have damaged it internally. I know that all
the circuitry inside is surface-mounted. I am
a very skeptical crazy man and just feel awful
since I know that I cannot replace it.

How would I know if it needs calibration? I just
have a gut feeling that I ruined it, eventhough
it still works. Can dropping it really cause some
internal damage or not?

If anyone has had this same awful experience, I
would love to hear from you guys.

Thank you.

Timothy

Those poor, leashed folks. They're helplessly dependent upon untold billions of dollars of computer equipment belonging to thousands of corporation, interconnected by millions of miles of cable, staffed by thousands of workers putting in tens of thousands of man-hours per day to keep that complex system running.

Hams, on the other hand, have not such dependence. It's the *only* communications medium, in which any two operators anywhere in the world, can communicate directly without using government or commercial communication services. Those same two operators don't even need to purchase commercially-built radios -- they can build them themselves.

Jeff

Canada and Australia could follow the US in reducing the Morse code examination requirement to 5 WPM for full HF access. Radio Amateurs of Canada announced plans this month to ask Industry Canada to eliminate that country's 12 WPM Morse requirement. The RAC Board of Directors has voted unanimously in favor of the proposal, expected to be filed soon. If enacted, the change would leave 5 WPM as the sole Morse code examination requirement for full HF access in Canada.

Meanwhile, the Wireless Institute of Australia reports it's seriously considering whether to push regulatory authorities to reduce the maximum Morse code license test speed Down Under from 10 to 5 WPM. WIA says it expects to discuss the matter in detail next month with the Australian Communications Authority.

The WIA says a majority of its membership divisions appear to favor the reduction from 10 to 5 WPM in Australia. The general issue of Morse code licensing requirements is expected to be a topic for debate at the IARU Region 3 conference the WIA will host later this year. Discussion of the International Radio Regulations regarding the Morse code requirement is expected to come up at the World Radiocommunication Conference set for 2003 in which Morse Code will most likely be eliminated as a requirement for HF access worldwide.

A single 5 WPM Morse code examination requirement for HF access goes into effect in the US on April 15 as part of sweeping licensing rules changes.

The United Kingdom and Sweden also have adopted 5 WPM as the Morse code examination requirement for access to the full HF amateur spectrum. The South African Telecommunications Regulatory Authority is said to be poised to act on a South African Radio League request for a lower code speed limit there. Other nations have expressed interest in the issue.

On top of that, wireless mics, my kids GI Joe radio, and Mr. Microphone were around for many, many years before cordless phones came along and invaded the very same bands. Those toy mics are still around using those very same freqs. You want to yell at someone, yell at the phone companies for creating phone-like communications devices using my kid's own toy microphone frequency. Now that's brains.

And to hear those very same people walk in and say its illegal to listen to those freqs...that's assenine.

Todd

Orginally about $400 if I remenber correct. Can not find my old Universal catalogs right now and for certain the latest model is considerbly less than 750.

As to what a less limited mode capable earlier model is worth cannot venture a guess. If something is banned seems everyone whishes to own it.

Ah, but in rec.radio.scanner, we want to know McCain's frequency and PL tone. Has anyone monitored McCain & his staff, SS, or press people?

What is McCain's position on laws against listenning to radio channels? Is there an analogy beteween the KGB arresting people for listenning to shortwave and Americans being arrested for listenning to cell phones?

I see no logic in what you seem to be saying. Not to mention that your basic premise, that people only listen to scanners to eavesdrop on "private" conversations, is unsupported by any evidence. And my 30+ years on the scanning hobby tells me that by far the vast majority of scanner listeners are law-abiding and responsible people.

By extension of what you're suggesting, we should outlaw the internet, especially newsgroups, where a message that I post to folks who agree with me can easily be read by someone I am not specifically sending it to. And listening to the private conversations of strangers as we pass on the sidewalk, in malls, at work or at school should similarly be outlawed? Perhaps we should outlaw all speaking in public places that is conducted in more than a whisper? Yelling across the street would be a felony to be sure, not to mention HEARING the yell.

If someone doesn't want me to hear their radio conversations they should immediately quit sending those radio waves right into the privacy of my bedroom and den.

Hi Glenn,

The scanner still works and the frequencies I programmed can still be heard.

But I am just wondering, what is the worst case scenario that can happen if
a scanner
like the PRO-43 is dropped 4 feet onto concrete.

Believe or not, I am losing sleep over it . I adore that scanner and now I
feel so bad.

Let me know,

Thanks.

There was a similar call from an anti crime group, here recently
in New Zealand to ban scanners aswell.

As far as I'm concerned while the likes of Govt agencies and
Embassies in one's own country can monitor radio communications
and telephone calls with impunity. Then the law abiding tax
paying citizen has the right to own a scanner.

If you're so concerned with "Privacy issues", then you better
also call for the ban on the CIA, NSA, DSD, GCSB etc, monitoring
communications. If your excuse happens to be you wouldn't want to
ban those agencies from monitoring communications, so as to
prevent possible "Terrorist threats". Then I'd say to you
remember Bin Laden, USA's most wanted terrorist, who just
happened to have been once funded and trained by the CIA! Not to
mention those same agencies roll in ECHELON.

ECHELON: NSA's Global Electronic Interception

Greetings to all,
Many of you may be familiar with my work at
the Southern Poverty Law Center, and beyond that with our
Teaching Tolerance project. It is this second facet of my
work with which I would like to speak to you about at
length here today.
As many of you know 1999 was not a good year for
those of us who wish to build a world free of Hate and
Intolerance. We thought that we had perhaps seen the nadir
of Hate pass us by with the trials in Jasper, Texas.
However, before we could get comfortable again we were
stunned by the horrific tragedy of Columbine, hundreds of
young lives shattered, perhaps forever; but even that did
not prepare us for Buford Furrow, a man steeped in the
Hatred of Aryan Nations who shocked us beyond disbelief by
first shooting to death a U. S. Postal worker because he
was not Aryan, and then walking onto the grounds of a
Jewish daycare center and actually pointing a loaded gun at
little children and pulling the trigger, just because they
were Jewish. How do we explain such madness? How do we
continue with our lives as if nothing out of the ordinary
has happened? If you're like me, you can't. The world just
can't be this way. People can't think and behave like this.
Something has gone drastically wrong and must be put right
again.

I only wish it were that simple. Many years ago I realized
that simply fighting the Klan or a mad man like Tom Metzger
in court wasn't going to be enough. There was too much Hate
and Bigotry in America to run after the worst offenders with
a fire extinguisher after they had thrown their Molotov
cocktails. Preventive measures had to be enacted to keep the
glass bottles from being filled with gasoline. That was the
basis for starting the Teaching Tolerance Project. With the
help of people like you we raised a good deal of money and
over the years have been able to distribute millions of
Teachers Guides to schools all over the country. To be sure
we have had much success. The most recent data show that not
only are Americans more ethnically diverse than ever, but in
fact are even ignoring race when they make the most important
decision of their lives in choosing whom they will marry.
The fact that all of us must rejoice in is the literally
skyrocketing number of interracial marriages in America. It

seems as if people are actually going out of their way to choose someone of a different race to marry. This I have come to believe is perhaps not only the manifestation of Teaching Tolerance, but an end goal that we must strive to achieve.

So, with all this rolling around under the covers with someone of a different race, what is there to be concerned about? Well, plenty I'm afraid. The Awful manifestations of Hate that we have witnessed all too often last year is perhaps not a series of coincidences or even a fleeting trend about to disappear. As many of you know, Hate mongers have taken to the Internet with a missionary zeal. Worse still, a few who have become concerned about spreading their Hateful insanity have realized that not everyone is online and have began to enact a counter program of sorts to our own. Many have printed up serious looking pamphlets with their computer and distributed these inside the lockers of students at school. One lunatic, demonstrating the power of the observation that "a picture is worth a thousand words" made up small, derogatory fliers using racial cartoons and walked into Supermarkets and placed them inside products to be discovered by an unsuspecting customer days later. Many young people have been reached by these and other methods. Skinheads have become an all too common site in many areas of the country, and while some of them may have grown hair again, many, like Buford Furrow, have not grown out of their beliefs. What must they think of our desire to not only live in peace with those who are different than us, but to marry them as well? This is not something that can be looked at too carefully. As Americans come together, those who hold militant racist beliefs will be forced to act on those beliefs to try to drive us apart.

That is why it is more important to Teach Tolerance to our children today then it was a decade ago. But, is simple instruction enough? It certainly wasn't enough to keep James Byrd from being chained to the back of a pickup truck and dragged behind it until there were only pieces of him left behind. Instruction wasn't enough to keep Buford Furrow from hunting Jewish children with a gun. The racist madmen among us have their program of instruction as well. We need something more to reach our children and imprint the idea of Tolerance upon their brain so as to forever keep them away from Hateful thoughts. To this end I believe I have come up with just such an idea, but it won't be supported without some difficulty.

From time to time we here at the Southern Poverty Law Center are privy to the hateful thoughts and ideas that many wish to avoid. We are required to not only be exposed to these thoughts, but to immerse ourselves in them so as to understand them, twisted though they are, so we may devise new methods to combat the disease of Hate. It was while looking at a pamphlet created by the National Alliance (which is run by a Hitlerian madman named William Pierce,

author of the infamous "Turner Diaries") that this idea came to me. The pamphlet talks about the higher than average incidence of the AIDS virus among black males. It seems to be a permanent fixation that racists have with black males. So much of their propaganda is targeted upon the black male. Much effort has been expended not only through our efforts, but throughout our country since the civil war to dispel the bigoted myths about African American males. It has occurred to me that it just isn't possible to do anymore in that regard. Literally billions of dollars have been expended to educate and persuade White Americans that blacks are just like us, but with all too many, this message has not gotten through.

So how could African American Males and AIDS represent a solution to the problem of educating our children to oppose bigotry? Well, the answer to preventing AIDS is to wear condoms, so why not have classroom instruction on how to put on condoms? Not just instruction, but a real live, participatory demonstration. To be blunt, why not bring in African American male volunteers and allow children to apply condoms on them? Not only would they learn good health practices, but perhaps the most awful racist taboo that exists would be crushed, forever imprinting upon the minds of our children the concept of Tolerance.

After getting over my initial excitement, I began to realize that there would be barriers to implementing this program. I mean, who would want to expose themselves to a room full of children, even if it was educational? However, when I sought out several African American males whom I know and explained the concept to them, and pointed out bluntly that they would not only have to expose themselves to a roomful of young white girls, but allow them to fondle them, perhaps clumsily, to my astonishment they not only consented, but were enthusiastic about the idea!

Of course, having the enthusiastic participation of African American males will not solve all the problems. Inevitably, the logistics of such an operation, the travel, the communications, planning etc. will cost money. Not just to implement the plan, but to educate people to the necessity for it. Trying to eliminate the ultimate taboo will drag out the Hatred of not only real bigots, but the latent bigotry that exists in so many Americans who have never been forced to confront it. Make no mistake, the bigots, cowards that they are, will use all sorts of excuses to hide behind in order to stop the implementation of such a program. However, this is nothing new. As incredible as it may seem today, when the Teaching Tolerance program was first begun back in 1991 it was met in many quarters with fierce resistance. With the help and financial support of good people however, that resistance was defeated. I hope I can count on your support in what I hope will be the final thrust through the heart of bigotry in America.

4414. FT: Pro 60 for Relm HS 200

Newsgroup: rec.radio.scanner
Date: 2000-02-20 00:00:00 UTC
From: "D. Schopp" <dschopp@sprintmail.com>
Message-ID: <64Sr4.9283$O43.366046@newsread2.prod.itd.earthlink.net>
Source record: 93671
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a wide coverage Pro 60 handheld scanner that I would like to trade for a Relm HS 200. The Pro 60 has 200 channels. It covers 30 - 512 MHz, 760-824 MHz, 849-869 MHz, and 895 -1000 MHz. This includes the Military Air band, TV audio and FM radio stations. Selectable mode which includes wide FM.

The Pro 60 is in excellent shape. There is a smudge on the display but it doesn't interfere with the view of the display. Includes rubber ducky antenna. No manual but the manual is available online at the Radio Shack web site.

I would like to trade the Pro 60 for a Relm HS 200. I don't need the wide coverage but would like a handheld scanner that has CTCSS tone capability.

Thanks,

D. Schopp

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

Sony has just announced a Family Service Radio that "trunks". Once you
enter a subaudiable tone code, the radio scanns the 14 channels looking
for an open channel before transmitting. Everyone one else with the Sony
radio in your group (and the same code) locks on to that frequency.

Why can't we hams have trunked repeaters? One good site and several
repeaters. Then trunk groups for the various segments of the community.

: I would figure this is one of the last ditch efforts to keep the Ham Bands
: available for "Amateur" operators. No matter what the requirements to get
: into the system, all previously licensed groups will have a beef.
: But, considering the current over-crowded spectrum which we enjoy to
Listen
: to as "Radio" communications, Watch as "television" communications, and
: support as "Public Service" communications, it won't be long before better
: communications equipment, able to work in the noiser "Amateur" bands is
: available for license. Then the strong Financial Lobby called
"Enterprise"
: and "Public Interest" will begin taking a closer look at the current
: "Amateur" bands as underutilized and request the FCC redress and reassign
: the bands under the guise of "Public Interest" This of course will mean a
: loss of precious communications spectrum to the highest bidder, as has
: happened in other areas of the spectrum.
:
: Now I know this will probably incite a small riot, but look at the
: advantages. Sure there will be a few people with more money than they
know
: what to do with that will buy the biggest-baddest Ham set they can afford.
: But this won't be the masses as envisioned (although three or four
: over-zealous operators per band are more than enough) Given all of the
: other anonymous mediums for self expression most of the average citizens
: will choose the route of "least investment"
:
: On the optimistic flipside, the bands will get better utilized, and as
such
: will become less of a target for the above mentioned group. The law of
: supply and demand will afford the astute amateur to gain better access to
: equipment due to lower costs, and thus putting amateur equipment into the
: hands of young lads and lasses who find Radio and RF propagation an
: interesting hobby.
:
: Needless to say I see this move as an ability to breath new life into a
: generation and a hobby which are fast becoming a thing of the past.
:

: Just my .02

I'm trying to build a little circuit to make a relay close
when a signal is received by a radio. (Cobra's and midlands (FRS) are
what I'm working with).

I want to use the speaker port, but my problem is that the
speaker always has voltage across it, squelch regardless. Anyone who
knows audio circuits knows about this problem. Can anyone think of a
way to check "speaker activity" through the speaker port? Anyone
perhaps have a schematic sitting on the shelf? I'm not looking for
anything too special, just to close the relay to trigger my event.

Any and all help appreciated.

I have the following radios for sale - these were posted earlier last week
but my PC crashed and I lost the emails from people intrested in the radios.
I am selling these because they are radios that I have two of, or no longer
need.

Icom IC-R8500 - $1000.00
Unit is in perfect condition, has the UT-102 Voice Synthesizer chip
installed for voice frequency readout, includes box, maunals, schmatics,
also PC software and serial cable.
Cell-blocked.
Specs: http://www.grove-ent.com/WBR1.html

AOR AR8200B - $425.00
Missing the rubber dust cover over the data port, otherwise in excellent
condition with no scratches or dings. Has firmware upgrade from AOR to
eliminate low battery condition bug.
Includes CC8200 programing cable, discriminator cable with 1/8" audio jack
attached, and CTCSS card. Cell blocked, US unit. Original AOR AC adapter not
included - went bad, using a Radio Shack selectable voltage AC adapter.
Specs: http://www.grove-ent.com/WBR7.html

Relm HS-200 (have 8 of these for sale) $100.00 each
Radios are in great condition - some have very minor scratches on the LCD
window that are only visible at an angle in direct sunlight. Includes all
original items including box.
Specs: http://www.grove-ent.com/SCN8.html

OptoElectronics Scout (Model 40) $300.00
In perfect condition - used less than 10 hours as a backup to an older
Scout.
Includes extras: N100 FM filter, all optional antennas, AR8200 Reaction Tune
cable.
Specs: http://www.optoelectronics.com/scout.htm

Payment forms accepted: US postal money order, certified (bank) check.

Thanks!

John Porter

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Joe Carlson / WPOJ430 <joecarlson@home.com>
Livermore, CA

Jon S. Van Allen - KF7YN <yonnie@att.net>
West Jordan, UT

The ACS newsletter is the most informative real-world look at communications to come along in quite awhile. I find it very interesting and enjoyable.

.....

>From the Mailbag:

GEORGIA AMATEURS RESPOND TO TORNADO DISASTER

Amateur Radio operators responded in force after tornadoes struck rural extreme southwestern Georgia this week, killing at least 18 and injuring around 100 others. The storms wiped out nearly 200 houses. Georgia Section Emergency Coordinator Tom Rogers, KR4OL, reports that hams from nearby communities including Moultrie and Albany turned out to help.

Twisters generating winds in excess of 150 MPH leveled a housing development in the town of Camilla, in Mitchell County late Sunday and early Monday. The town was one of the worst-hit areas. The storm also tore roofs from houses and flattened mobile homes. The storm caught many by surprise since warnings were not issued until after residents had retired for the night.

Georgia Gov Roy Barnes declared a state of emergency in Colquitt, Grady, Mitchell and Tift counties. Georgia Emergency Management Agency reports emergency shelters have been set up in Camilla and Moultrie. The Salvation Army and the Red Cross also were involved in the recovery effort.

"Shelters are open, and the Georgia Baptist Hams are setting up feeding locations and assisting with the cleanup," Rogers said. An HF emergency net was established on 75 meters to coordinate activities, but the need for emergency communication was minimal since the telecommunications infrastructure was still intact.

Damage was put at $25 million. Thousands were left without power in Georgia and elsewhere as a result of the severe weather. The storm that wreaked havoc on Georgia was part of a system that also struck Arkansas, Tennessee, Mississippi and Alabama before moving into Georgia, Northeastern Florida and the Carolinas. (The ARRL Letter)

Current Events:

West Valley ARA Announces Web-Based Exam Site

The West Valley Amateur Radio Association (WVARA)
is providing public access to its WVExam online
Amateur Radio exam practice software. It's located at

http://www.wvara.org/wvexam/

This web-based examination software was originally
written for WVARA's New Ham classes in 1996 and 1997.
It can be used for all current written exams until
April 14, 2000. Effective April 15 the new exam pools
become effective, and all exams taken April 15 and
later will be based on the new question pools. Until
then, though, the WVARA site can be an effective tool
for those who choose to beat the deadline by taking
upgrade examinations prior to April 15.
The following tests are available at the site:

Element 2 - Novice
Element 3A - Technician
Element 3B - General
Element 4A - Advanced
Element 4B - Extra

The software generates a random exam on a web form
the same way that the Volunteer Examiner Coordinator
(VEC) organizations would. These are from the same

published question pool as the actual exams so these
are real and effective practice. in addition, WVARA's
practice exams can be taken a section at a time as one
studies through other materials.

This week's EMCOMM Bulletin:

EMC225 Statewide Comm Drill 5/5
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC225 Statewide Comm Drill 5/5 For release 2/21/2000

Continuation of a Statewide Communicatons Drill example:

"California Law Enforcement Radio System (CLERS) CLERS is a
statewide law enforcement point-to-point network. It was
designed and installed by the State of California. Virtually
every county and major city in the state has a control station.
It is comprised of 22 separate mountain top relay stations
interconnected through the state microwave system. It permits
contact from any member station to any other member station. In
addition to counties and cities, the State OES and California
Highway Patrol have stations. It is considered the backbone of
the statewide law enforcement emergency communications system.
Yes Fail N/A
Warning Center
SOC/REOC
State Agencies
Operational Areas
Field Representatives
Law Regional Coordinators

California Law Enforcement Mutual Aid Radio System (CLEMARS)
CLEMARS is the California Law Enforcement Mutual Aid Radio
System. It should be noted that this is a system not just one
channel and is a logical extension of the law enforcement mutual
aid concept. The system is provided and managed by the
Governor's Office of Emergency Services (OES). A key aspect of
its design was to provide a frequency that would allow agencies
from different jurisdictions the ability to communicate on common
channels. CLEMARS includes frequencies on low band, very high
frequency band, ultra high frequency band and 800MHz band.
CLEMARS has been designated to permit use of certain channels for
necessary day-to-day operations, provided such use does not
interfere with a higher priority needed in that, or any
neighboring area. This is a tactical system so communications
checks should be done with your field units.

Yes Fail N/A
Warning Center
SOC/REOC
State Agencies
Operational Areas
Field Representatives
Law Regional Coordinators

OES Fire Net The Fire and Rescue Branch Radio Communications Network is designed and equipped to provide two-way communication both on OES-controlled and locally controlled frequencies. This in-place system employs the use of two crossband channels operating through a network of mountain top repeaters interconnected by the state microwave system. Repeaters and microwave interconnect switches are tone controlled. OES Fire and Rescue communication equipment is designed and purchased to support the Statewide Fire and Rescue Mutual Aid System. Therefore, all mobile equipment is available during an emergency or incident to any fire agency upon request.
Yes Fail N/A
Warning Center
SOC/REOC
State Agencies
Operational Areas
Field Representatives
Fire Regional Coordinators"

(The Auxiliary Communications System is separately tested.)

" DRILL SUMMARY / COMMENTS:"

(end of an example of a state communications drill in 5 parts.)

4452. Shuttle Landing tomorrow - Viewing Opportunities

Newsgroup: rec.radio.scanner
Date: 2000-02-21 00:00:00 UTC
From: "Todd L. Sherman/KB4MHH" <afn09444@afn.org>
Message-ID: <88s8uu$19d8$1@spnode25.nerdc.ufl.edu>
Source record: 93559
Cross-posted to: rec.radio.scanner,sci.space.shuttle

The shuttle will be landing tomorrow at KSC. First landing opportunity is at 4:50pm. This track takes the shuttle over the extreme SW part of the Great Lakes, down to NE GA, over to just off the coast of Jax, out over the ocean, then due south into KSC. This is a terrible track for viewing in Fla.

BUT!...

The SECOND landing opportunity looks GREAT for people in North Fla.! and that's _rare_. It comes in over SW Ga., over I-10/I-75, over Gainesville, then turns southeast towards KSC. Looks like it goes _directly_ over Gainesville, too. If it lands on the second opportunity, the landing should occur at 6:22pm, or right about sunset.

Both tracks are terrible for Tampa area viewing, this time. But, the rest of us in N. Fla., _if the second track is taken_, affords us very rare chances for scanning the direct shuttle freqs, for taking photos, and home video, as it passes overhead! And be prepared for that double sonic boom.

There are also EAFB alternates.

So, heads up, people! Tune yer scanners to shuttle freqs. (IF it takes the second landing opportunity, that is. If not, then GA and states NW of there should have a better opportunity to see it than us.)

To view the projected ground tracks, and related data, and a link to city-by-city viewing timetables, see http://spaceflight.nasa.gov/realdata/groundtracs/index.html. (And _no_, there is no "k" in "groundtracs" in the URL.)

Enjoy!

Todd

Even "terribler" when you consider odds of a KSC landing are slim due
to weather... Mission Control says Edwards is the most likely option
at this point.

You can scan whatever you want in England.

Unlike the US there are absolutely *no* restrictions on scanner reception frequencies.

However, if you are stupid enough to let other people know that you are eavesdropping on private conversations then you probably deserve the bollocking (or worse) that you will get from the boys in blue.

The laws are strict, but they are rarely used.

Can you give me the name of even one UK journalist that has been prosecuted for scanning cellphone conversations and printing the transcripts in the press? The law says that you will get 5 years for that kind of behaviour, but I have yet to see anyone prosecuted.

Has anyone out there used a BC-245 as a car scanner by
connecting it to an external speaker, external antenna and
12V from the car?
How well can it drive an external speaker?
I am already using an external speaker for my ham xcvr,
can I simply hook my BC-245 and ham xcvr to the same
speaker without having problems?

>ocean, then due south into KSC.

I live in the Great Lakes area, so it has never even occured to me that
I'd ever be able to spot a shuttle coming in. I'm not getting my hopes up
or anything, but just how far away from KSC will people first be able spot
Endeavour, and at what altitude will she be? Would the same be true for
night-time conditions?
I will be 500 miles to the east (Toronto) as Endeavour passes by the
Great Lakes, but I'd imagine that she will still be pretty high up at the
time, increasing the range from which a ground observer might see something,
even if it's only a faint trail in the sky or whatever.
I guess my question boils down to this: Is there any possibility that
us northerners from the Great Lakes area will ever spot anything in the sky
when a shuttle follows this path in? In view of the fact that things get a
little hot on the way down, would a night-time landing passing over here be
possible to spot?

Not at all! he is something of a libertarian type conservative who
wants to maximize personal freedoms and ensure less government interference in
our day to day lives. To be sure, he wants to make specific reforms in the area
of "soft" (a/k/a "dirty" or "sewer") money in campaigns, but this does not
impact the radio monitoring issue. Remember, it was the Democrats who passed
the ECPA way back when and the Democrats in Congress who passed Clinton's Radio
Monitoring Hobbyist Suppression and "Safe Streets Act. If you want to target
the folks who are at odds with our hobby (and, to be fair, they don't see
themselves as impacting innocent hobbyists); look at the Democrats and those
folks like Tauzin who are taking those big soft money contributions from the
likes of the CTIA. I won't politicize this group any more than I may already
have done by pointing out whom Tauzin supports in the primaries.

First pass for a 4:28pm landing looks like it will pass across NE
Minnesota, N Wisconsin, out over Lake Michigan just south of Green Bay,
over SW Michigan, over N Indiana (around South Bend / Elkhart), over W
Ohio west of Springfield, into Kentucky just east of Cincinnati, over
East Kentucky, the NE Tip of Tennessee, W edge of N Carolina, the NW tip
of S Carolina, over W Georgia about at Augusta, out over the Atlantic
between Jacksonville and Jeckyl Island, curving back and flying over the
beach from about Daytona Beach to the cape.

I was on an airline flight over Pittsburgh and the pilot pointed out the
lights of Cincinnati clean across the state of Ohio. The shuttle is
going to be about 6 to 10 times higher so the first pass should be
visible about 25 to 30ï¿½ elevation looking ESE.

I don't know if any FCC regulations would prevent trunking in the amateur service, but certainly there's no technological reason trunking couldn't be used. But why?

Basically, most of the places where I've listened to 2 meters (probably the busiest
of the ham bands over 30 Mhz), and even more so on 70 centimeters and 220 Mhz, most repeaters are quiet 95%+ of the time. Some repeaters just sit there and ID

from time to time, but carry no conversations, as far as I can tell. A few high-level
repeaters get used a lot more, but it's almost impossible to find someone to chat
with at 9pm on a weekday even on these repeaters.

Trunked simplex operation -- now that might find a niche if trunks could be divided
by interest group or intention (e.g. DX vs. ragchew.) It would be useful not so much
to alleviate congestion as to simplify choosing frequencies for mobile operators.

I was about to buy the scanner mod handbooks from Bill Cheek but thought I'd better ask here first ....
Does number three (Ultimate Scanner) include the first two or are they all different. I'm looking to build a pc
interface for a Pro 2006 along with several other interesting mods and for a Pro 43 also. Will number three
cover everything for these two models? Thanks for any opinions in advance.

Steve

Ok the " 205 " is the PRO-2006 from GRE sold by RADIO SHACK at the time a very popular because one of best scanners that was built on the market but you will have to do some modifications cause they are on 220 volts down there and you will have to change the transfo in it and if it stop working its to much of trouble to send it in the UK.(it far and diferente country).But i don't want to scare you cause the radio is very well built so good that I'll work just fine. As for the " 225 " they compair to the "PRO-2042" but it dos not look the same on the picture. search for your self on http.www.javiation.co.uk

> BSCJ/Soc

I didn't think it was possible to hear people whining while reading, but...

"you shouldn't tell people..."

"it's not true..."

whine, whine, whine.

I was responding to a post that compared the England to Iraq, using scanning as an example of draconian lawmaking.

The comparison was pathetic.

You can buy scanners in the UK with full frequency capability.

You can sit in your shack and scan any fucking frequency you want.

You can publish transcripts of the personal cellphone calls of royalty in the newspapers.

You can go to raves and hear all of the local analogue cellphone calls mixed in to trance music.

Unlike Iraq, England is a tolerant place (on the whole) which is why nobody could even be bothered to ban scanners.

Listening to other peoples transmissions was banned in UK law long before the modern scanner was invented.

The stiffest legal penalties that the user of a scanner could face would be those that were put in place to stop phone tapping rather than any kind of radio listening.

It is you that is confusing the issue.

I have a Bearcat 3000 handheld scanner for sale. Good condition. The nicad battery pack is brand
new, about 2 months old. The radio is in very good condition, no scratches, well taken care of.
Everything works perfectly. Includes rubber duck antenna, instruction manual, belt clip, original
box. I do not have an AC adapter, however you can purchase one from Radio Shack for around $10.

Covers virtually every frequency from 25 MHz to 1.3 GHz - Frequency Transfer - Auto Sorting -
Auto Store - Selectable Attenuator - Auto Weather Search - Programmable modes of AM, NFM & WFM - Programmable steps of 5, 12.5, 25 & 50kHz - 400 channels - 20 banks.

Picks up CB - CORDLESS PHONES - HAM - RAILROAD - MARINE - MILITARY AIR -
POLICE - FIRE - AMBULANCE - WEATHER - AIR - FM RADIO - TV AUDIO - NEWS
REPORTERS - SPACE SHUTTLE - STATE ROADS - WIRELESS MICS - ETC...

$200 + $10 shipping.

I've seen it on a TV police Doco from the UK
they made a few arrests of people with Police freqs programmed into
scanners after routine speeding ticket stops, (there is your proof that
using a scanner for illegal activities doesn't work)
So yes they are very restricted in the UK
and being treated as a criminal for doing nothing more than owning a
scanner with Police freqs programmed into it
at least we don't have to worry about that here in Australia
everything is fare game with only listening to phone freqs being
illegal, but you have to be caught actually doing it

If it were at nighttime, I'd say _definitely_ look up, because you might
be able to see the reentry contrail (a glowing contrail). However, since
this one is during the day, I dunno. At about your location, I'm not sure
if you'd be able to see the shuttle itself or not.

Currently using a RS PRO-91 and am quite happy with it. However, I have an opportunity to purchase a new Uniden 245 Trunk Tracker at an excellent price. Question for the audience: besides having 300 channels and the ability to track non-Motorola systems, what's the advantage(s) of the 245 over the PRO-91? (My area uses Motorola systems exclusively, so the 245's ability to track GE/Ericsson is not an issue.) Does the 245 have a better front end, better made, etc? Or would I do well to just keep my PRO-91?

Not all that secure.
I have a set of "Playskool" baby monitor that operate down around 290KHz.
They easily carry to both of my nieghbors, and I can pick it up for severral
blocks on my car LF/MW/SW radio. That is with the stick antenna, I suspect
that a SWL with a decent antenna could hear it much further away.

Unless you've got a badge and stickers to get on base, you may have some difficulty in being here. The USAF isn't going to open the public viewing area, according to our PAO people.

This gives me some incentive to get out of here on time, at 1600, for a change, because they close the roads into Dryden something like twenty or thirty minutes before the landing. With a 1648 landing, I can't do much dawdling and get hime in time to meet the landscaper who's putting in my new rose bushes.

I've been out of town for several weeks and I have been looking around
for a new, revised availability date for the 780XLT. Is it still
June/July 2000, or, is it possible they'll just show up at dealers in
the next couple of months unannounced?

I noticed that CEI was taking "no obligation" reservations for the
780, but I never did find how to sign up... Anyone have any new
information to "leak" regarding availability/price or anything else?

Thanks in advance,

What you want is something like a device called "The Night Logger". They used to be available at scanner dealers. It turned on a tape recorder when there was audio present on the speaker line. Another device is called a noise gate. It too could be modified to do what you want. Check out this web site:

And we heard the double sonic booms nicely here in Gainesville. I'm not sure if I got the shuttle on video or not. Something went right overhead with an _unbroken_ contrail at about the time its supposed to go over, but I kinda ignored it, and it was hard to focus on anyway. Someone else said they saw it due east about 30-degrees up above the horizon, but then, that wouldn't make sense because it was supposed to go due overhead of us. However, as usual, after the "jet" disappeared, a couple minutes later, there was the sonic booms, and very loud. Been waiting ten years for another overhead pass like this, and the sun was even low this time, and still, I think I missed it. I was trying to explain how this was the second landing opp, not the first which would have taken the shuttle along the coastline - which is what the other person apparently thought.

Darn it, if that NASA web site had the tabular city-by-city sighting data posted, I'd have known for sure where to look, when, how high, when to expect the sonic boom, etc. But, I paused the camera while scanning the sky for it and missed getting the booms on tape, too. 8-(

I'm severely bummed by the lack of preparation effort given the public on their web site. It always seems like its 50-50 or less as to whether or not that info is actually going to be posted. 8-(

These kind of right-overhead-of-Gainesville chances come maybe once every ten years or so. I was outside and prepared, just without the necessary tabular data beforehand -- to know exactly where it'll pop up, how high and

where it will go over us, and where it will disappear, and at what exact times these things will occur. Perfect opportunity...no data. ...SO bummed! If that data were there, TV-20 here could have set up cameras and tried catching it as well - without moving a foot from Gainesville.

Not making an effort to get that data out with a shot like this is like telling everyone there's going to be a huge 4th of July celebration and then not telling anyone where its gonna be, but telling them to have fun attending it. 8-(

Todd

Design tips:
Use a capacitor (in your case it is a DC blocker)
Feed the audio (from the cap) into a diode (to rectify it)
feed the rectified audio into a comparator.
feed the other comparator input with a pot (to vary dc bias -- change your
trigger threshold)
feed the output of the comparator to a transistor (to act as a switch)

bob's your uncle. piece of cake.

Did you ever try going here:
http://spaceflight.nasa.gov/realdata/sightings/SSapplications/Post/JavaSSOP/JavaSSOP.html

It had all kinds of nice data including the part where the shuttle was
going to pass over Ft. Wayne, IN, with the point of closest approach
being 70some degrees above the horizon. Of course, that would have
been if it had landed on orbit 180. My dad was pretty bummed that
they called the first pass off, he was set to go on the roof with some
of the other managers and have a look. The clouds were even breaking
for the occasion.

And then here at Purdue, they dropped NASA TV coverage some 20 mins
out from touchdown (forgot that we had that when asking for places for
up to date info earlier today). I wasn't very pleased.

Well, I've not had much luck with Java apps. About half the time I load
one, my computer crashes. Then they take SO dang long to load - especially
at the NASA site, because everyone else is also trying to access them at
the same time. They're such a pain in the ***, sometimes. You press a
button to change something, you wait a half hour for the screen to repaint,
you adjust another button the other way, you wait another 15 minutes for
the screen to repaint. Like that. I'm using a 133 MHz computer, so that
might have something to do with it. Kinda slow compared to the faster
machine out there. But, now you see why using that is such a rediculous
idea for me. 8-(That's why I keep Java turned off, and why I like the
text-version tabular data. I know my way around the sky well enough, all
they have to do is point me, gimme a start time, a max height with a time,
and I'm okay.

>And then here at Purdue, they dropped NASA TV coverage some 20 mins

Sigh. The lack of concern over the shuttle by our own government just
amazes me. 8-(

I guess I am a little pampered by my (used to be top of the line) PII
400 w/256MB RAM and the school's DS-3 to UUNET. No waiting for me.
:)

Yeah, they seemed to think that some videotaped course was more
important after showing NASA TV for the entire mission, 24/7 (as they
do for all of them). <g>

You mean meet new people that hate you because you like microphones and
not Morse Code? You mean learn OLD things like Morse Code?

Forget about the current group of Hams that are close-minded and afraid
of change and new technology. We get a group of our OLD friends to get
licensed and have FRIENDLY conversations with each other rather than
whine and moan about the improved license requirements.

My wife just bought a scanner for herself, being the nosey type, but we're both having fun listening to the radio "speak". We've got resources for all the APCO Ten-Codes, but are looking for a resource for the other codes they use . . . things like 636 and 104, etc. Any FAQ's or sites that would list some possibilities, or are they going to be too regional specific??

Thanks in advance.

Like TomCat said, its the data signal (digital signal) of a trunked system.
The system's computer uses this to determine which frequency is available
for use. Most systems change this frequency precisely at midnight for a new
digital frequency.

Did either of you guys actually listen to the signal? It doesn't sound like
any trunking control signal I've ever heard. What trunking format is it?

You are confusing the issue. Scanning of most things that people commonly monitor with scanners (police, fire, EMS, military, in fact any non-amateur, non-marine service) is in fact against the law in the UK. It is not practical to restrict all of those frequencies. It would be easier to ban scanners altogether, which for some reason the UK has chosen not to do.

However, the fact that people listen to scanners without being prosecuted does not change the fact that it is against the law. As you point out:

> The laws are strict, but they are rarely used.

So you admit that the laws against scanning exist. You shouldn't tell people, "You can scan whatever you want in England." It is not true.

Latest weather *strongly* suggests an Edwards landing. One news report
said "NASA informed the astronauts that landing on Tuesday at the
backup site at Edwards Air Force Base in California was the 'only
viable option.' " If that's the case, it would be at 6:48 Central time.

It's been a long time since there was a landing at Edwards, hasn't it?

[..]

If what your are trying to accomplish is to activate a recorder when the squelch opens you may consider an equivalent method to do this using a computer, software and a sound card.

Check out http://www.davee.com/scanrec.html

This program can be set to activate at any given signal level (regardless of whether the squelch is open or not) and when that level is exceeded it will start recording.

Naturally, this solution is only semi-portable assuming that you have a hand held scanner and note book computer.... But it is fine for stationary or semi-stationary applications.

Welcome to the world of scanning! I hope both you and your wife have many years of listening pleasure.

The web is a great place to find information and frequencies. Go to any search engine, such as altavista, excite, webcrawler or yahoo, and enter "police frequencies" and your city/county. Something's bound to pop up.

Another place to find information is at your local amateur radio club. Check the phone book and see what you can find. They're bound to have some of the code lists that you want.

Also, you might want to pick up a copy of Police Call, available at your local Radio Scrap. They are broken down into I believe nine volumes, and you can purchase the one that has your state. That's filled with different frequencies, and possibly some of the police codes for your areas.

But keep checking the web, and always check the newsgroups like you are doing. There's a lot of scanner enthusiasts out there, and you're bound to find some of them who can share frequencies and codes with you.

Have fun!

Hi, I've just put up my first long wire : - 120ft wire - Watson LWB mkII Balun - 20ft RG58u downfeed to AR8000 receiver.
Question is, should I connect the outer braid of the coax to anything such as the outer core of the Balun or should I leave the outer braid trimmed back, sealed and unconnected at both the Receiver and the Balun?.

I'm a complete novice to SW listening and this type of Antenna set up, so any help will be grateful !.

Regards,

Matt.

4566. DENVER: the traffic helicopter frequency

Newsgroup: rec.radio.scanner
Date: 2000-02-23 00:00:00 UTC
From: kpearson@nyx10.nyx.net
Message-ID: <951332203.395169@iris.nyx.net>
Source record: 93403

For residents of, and visitors to, Denver, Colorado, the frequency for Jonathan Steele, a helicopter traffic reporter for the tv channel 2 and three or so radio stations, is 450.6875. The radio stations are 99.5 "The Hawk" and KOSI (don't remember the frequency), plus an AM station or two. It's handy to get frequent traffic updates if you need them; it's interesting to hear him on the scanner and on tv channel 2 at the same time, and it's fun to hear him talk to the radio station program producers and his ground base team, crack rude jokes, and put down Denver's pro sports teams and then say he should probably watch what he says and it's a good thing nobody but his producer is listening (or so he thinks :-)).

I live near Jeffco (Jefferson County) airport and once I got to monitor his approach and landing at the airport, so you may be able to hear him talking to the Jeffco tower, too (118.6, I think, but I don't have the freq handy right now).

He is on during morning rush hour (maybe during afternoon rush hour too, but I've never checked). Happy listening.

4567. Re: Imported Scanners - What's the Scoop?

Newsgroup: rec.radio.scanner
Date: 2000-02-23 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <8919bv$73i$1@newcastle.cs.ubc.ca>
Source record: 93404

So much misinformation! The simple truth is:

Scanners that cover the cellular phone frequencies are legal for sale
in Canada. Period.

Individual models sold in Canada may or may not have those frequencies
blocked, depending on the whim of the manufacturer. Radio Shack
scanners are all blocked, since there is no difference between the
Canadian and USA products. I think this is true for Yaesu, for
example.

Other manufacturers make special Canadian versions of *some* equipment.
The Icom R2 Canadian version is unblocked, the Icom Q7 is blocked.

Perhaps other manufacturers produce all their scanners in Canadian
versions - but you need to check the model you are interested in.

You can also get European or Japanese (etc.) versions of scanners.
These are generally unblocked, but are set up for different frequency
allocations in the areas they are sold for. This may or may not
be a problem for you.

Dave

Andy was correct,

The codes and signals used by the department that you are listening to may be the same as the local standard, a variation of the local standard, or a completely unique set of codes.

As another stated, use web search engines and see if you can find any information on your local department, or for amateur radio clubs in the area. They may have a listing.

But, as Andy said... If you cannot find anything, careful listening will divulge most signals and codes over time. When I started scanning I could not find any lists for my area, and the internet was still mostly a college used resource and the web did not exist. After a few months of listening I knew most of the signals and codes. In fact I knew more of them when I listened a lot than I do now, and I work with them now. A good portion of the time the officers will use enough english with a code or two that will allow you to know what the signal is. Over time you should get a pretty good list of what things are.

I hope you enjoy the hobby, it can be addictive. Just wait until you or your wife hears you first high speed pursuit. Exciting! Even more exiciting is if they come your way and you can watch them go by. Just be sure to be safely out of the way!

Have fun!!!

Bill

Source record: 93412
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,rec.radio.shortwave

I am going to buy a new receiver shortly, I am undecided on the type to buy due to my lack of knowledge on the products available. I know all the specs and features but not how they perform.
My main need is to receive short-wave, this is due to the fact I have a Pro 2042 scanner for VHF/UHF and a AOR 8000. My short-wave unit is a DX394 which I now find wanting.
I think I need AGC on the unit I buy, this I believe relives the problem of high and low volume outputs on strong or weak signals respectively. (This is a nightmare on my DX394)
I also want the unit to scan channels, and have a auto store search facility.
I use a long wire aerial and ATU for short-wave and a discone for VHF/UHF.
I could buy a unit that combines HF/VHF/UHF but again I don't know how they perform "in real world conditions" By this I mean what you the public think of the available equipment, not what a possibly bias mag reports.
I'll list the units in my short list (!) and please give your comments. And other suggestions.

Icom R8500
Icom IC-R75
JRC NRD545
Fairhaven RD-500DX (Latest spec)
AOR 5000+
AOR 7030+

I know the list is long but I am unable to reach a decision so all comments on the above equipment are most welcome.
TIA
Paul

They are typically regionally specific. Search for North Dakota scanner freq, etc. See if you can get the list that way -- or be more specific about where you are -- almost everywhere there is someone with a list of the local signals and 10-codes, etc.

cheers

And your point is?

In the UK the same information would go out over local broadcast stations.

Sending it out over police frequencies would mean that 0,001 per cent of the population would hear the message.

Gee, that's so much more efficient than calling one tow truck... how do we cope in the UK without constantly monitoring police frequencies?

We have NASA SELECT on our CCTV here at Dryden. Those of you who only
see it when there's an Orbiter up should see it when there isn't.
About half the time, it's announcements that the next thing shown will
be in three days or it's talking heads. Of course, the other half
it's interesting replays, though, so it's not all bad.

>
Matt
Before I moved I used to have the very set up you mention, except
reciever, mine is a Yaesu frg 100. Im not sure if the baluns were the same,
mine was a magnetic longwire balun made by Watson. It had a coax connection
on one side and a wing nut on a machine screw stud on the other. The
antenna lead went on the wing nut stud and the coax connector on the other.
The coax
then simply went to the radios so 239 connector, of course I had the radio
grounded to cold water pipe. The purpose of the balun is to provide a 52 ohm
match between the longwire (1000 ohm) and the coax and radio (52 ohm).
I had excellent results with that set up. I tried it without the balun and
you'd be surprised at the difference with and without the balun in line. I
would say that if you leave the outer braid of the coax unconnected you
would be defeating the purpose of the balun. The radio is going to see
approximately 1000 ohms at the antenna connector if you are only going to
use the center conductor of the coax.

I recently bought a Radio Shack Pro-2050 Trunk Tracker, and with the standard 1.75ft antenna that came with it, it was impossible to get a trunked channel. Heck, I left my VOX Computer Recorder on for 48 hours and nothing!

Finally, inspired by a friend whom had the same scanner as me, and my same dillema, and he had a setup made up of Coathangers, Wires, Coins, and Playdoh to hold it together that was capable of TrunkTracking, so I set out to make my own antenna

As primitive as it sounds, This is how it works. Ive got one 100ft Stereo Speaker (Copper and Alluminum) inserted into the Ext. Antenna Port on my Scanner, and the rest of the wire goes onto my roof (One story house, Flat Roof) and wraps around up there, then hangs down at the end by my kitchen, where I can plug it in from there.

Is this a Good Idea? Is it Legitimate? Is It LEGAL? Could it be Harmful (other than lightning) to my scanner? Send me some Feedback Guys.

Why don't you just buy an outdoor base scanner antenna? It would work a lot
better than what you have rigged up now.

There are NO scanners being sold new today for use in the United States that can be modified to receive the cellular band, or any other band that they are not designed to receive. They are microprocessor controlled rather than using a simple diode matrix as older scanners did. Furthermore, the processor is buried in a glob of epoxy to prevent tampering. All the new scanners being produced and sold to the USA are required to be "not easily modifiable" and "likely to cause the destruction of the radio if attempted" by Federal law.

4605. Any better BC245 software than WinScan?

Newsgroup: rec.radio.scanner
Date: 2000-02-23 00:00:00 UTC
From: Michael Kellogg <mkellogg@linkline.com>
Message-ID: <sb9gsj9vr2a14@corp.supernews.com>
Source record: 93442
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I've been demo'ing Winscan for a week or so and, while it's got some pretty basic flaws, I enjoy using it a bunch. I'm considering registering it.

I've also tried - briefly - RadioManager and FrequencyManager. I got nowhere fast with either, and abandoned them after a few attempts.

Am I missing out on any other software that might be better than WinScan?

Bubba wrote in message ...
>Design tips:
> Use a capacitor (in your case it is a DC blocker)
> Feed the audio (from the cap) into a diode (to rectify it)
> feed the rectified audio into a comparator.

+You may wish to add a cap to ground on the rectified audio signal to integrate over several cycles.
+And perhaps a high resistor in parallel with the cap to discharge it when no signal is present.

> feed the other comparator input with a pot (to vary dc bias -- change your
>trigger threshold)
> feed the output of the comparator to a transistor (to act as a switch)
>
>bob's your uncle. piece of cake.
>
+ Another point. If your audio level is not high enough to get through the rectifier, you might
+ consider an active rectifier using a diode in the feedback loop of an opamp circuit.

In the UK *we* like a little privacy. That is *ordinary* citizens. The law protects as well as it restricts.

I have included the actual legal position below.

The first thing to notice is the date of the law -- 1949. This law is not a response to the use of scanners. It is a law which clarifies who has the right to interfere in the private business of other people -- and for what reasons.

The downside of the legislation is that it can be used by coppers to harass you whether you are a criminal or a law abiding citizen. If you use your scanner in public you have to make sure that your scanner is not programmed with any frequencies other than public broadcast bands, radio amateurs and CB. Or you keep your scanner in your house.

(You may be aware that the AOR8200 comes programmed with low and high PMR, airband, military air and USAF searches -- and is therefore illegal -- but I don't see any distributors being prosecuted)

It's a pain in the arse, but I would rather have it that way than put up with hardware restrictions.

There are two offences under law:

Under Section 5(b) of the WT Act 1949 it is an offence if a person "otherwise than under the authority of the Secretary of State or in his duty as a servant of the Crown,

either:

(i) uses any wireless telegraphy apparatus with intent to obtain information as to the contents, sender or addressee of any

message whether sent by means of wireless telegraphy or not, which neither the person using the apparatus nor any person on whose behalf he is acting is authorized by the Secretary of State to receive;

This means that it is illegal to listen to anything other than general reception transmissions unless you are either a licensed user of the frequencies in question or have been specifically authorized to do so by the Secretary of State.

or:

(ii) except in the course of legal proceedings or for the purpose of any report thereof, discloses any information as to the
contents, sender or addressee of any such message, being information which would not have come to his knowledge but for the use of wireless telegraphy apparatus by him or by another person."

This means that it is also illegal to tell a third party what you have heard.

With certain exceptions, it is an offence under Section 1 of the Interception of Communications Act 1985 if a person-
"intentionally intercepts a communication in the course of its transmission by post or by means of a public telecommunications system."

This means that it is illegal to listen to telephone calls, including mobile phone networks which are designated as forming part of the public telecommunications system.

is problem was that he could hear one side only. so that was not a digital phone because first with a narrow fm mode scanner the scanner passes thru the frequency but it will stop at the proper frequency if you scan on wide fm mode but you will only hear a kind of continuesly syzling noise. But that was not his case.

well the optolinx is not an FSK 4level it has its limits. its mostly for programing the radios and give command to them. So get a 4level device wich is not easy to find but easier to get the blueprint in a couple of dozen of places on the net but there not all very good.

I have an optocom bit-banger to but no edac because I the 1.5 in it and its
a real machine with probe and trakstar its great. The dowside is that I
can't use it without the computer because no board on it. Ok the stand alone
is fine some time but there no bottom for scan resume if there alway
modulation on a particular freq. for exemple open mike or others. But
ROOSTER here want a none expensive one and scanstar and probe does not work
with all scanners. 73 to you this is "Richard, VE2AIB"

It's probably the case but he didn't say wich version of PRO-43 because I had my first on scanner in 1986 and that was the first PRO-43 wich the range went from 30 to 512mhz only and this one needed three smalls flats batteries for keeping the memories. So now he knows.

well I bought a scout 40 and the third one that gave me the axacte frequency at all time. first paied to send and receive, they change a chip inside but still the same problemm and paied a second time wich they changed it but deffectif as well and send third time with pay pay pay again and finely I had a good one. My friend bought a couple of things from them wich one was the optocom and was deffectif as well. WELL WHAT A QUALITY CONTROL I may say. They make nice and great goodies but if only they could check them before they ship because I live in canada and the prices here are double and more that we pay for it so we expect to have a good working peace of machine because it expensive to send to the states.

Don't risk it you will loose money. guaranteed delivery is only where its legal because contrarely to a peace like a CPU a scanner will be easely check and wont cross the boarders. Me in CANADA I don't have problemm with scanners but other things that is legal to have for american but illegal here own here. Some may succeded but are you willing to risk your time and money?

Wrong! first the cost here for the same scanners are much higher because the rate and the profit margin and even though its legal to listen cells here RADIO SHACK's scanners are cell
block since 94 about and believe me I'm not a rookie in scanning but there are specialised stores for that here like RADIOWORLD in Ontario,Canada and other places.

Well Robert everything is wright here except for one thing, maybe you don't know but some specialised store here will sell you the unblock versions so you don't always have to import
it. Some time some radio are not available her so then there is no choice here but import it.

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

Where did you hear that Radioworld is not a scanner retailer? God good God I live in Canada and i whent to Radioworld 600kilometres and i know them becase for a while now it was two stores that merge together and it is a radio retailer. CB, ham, scanners etc... As anay company, they add on the net.

Australian Police when needing a vehicle to be towed just give the
dispatch the address.
the Dispatch then says "any Towies?..we need a vehicle towed from
<addres>"
and they just sit and wait for the 50 tow trucks to show up 30 seconds
later

TooManyRadios wrote:
> Question for the audience: besides having 300 channels and the ability to track
> non-Motorola systems, what's the advantage(s) of the 245 over the PRO-91?

1. Better overall receiver
2. Ability to scan conventional and trunked simultaneously
3. Computer interface and control
4. 100 IDs per trunked bank
5. 200 ID lockouts
6. Auto Light

> Does the 245 have a better front end

Oh yeah.

> Or would I do well to just keep my PRO-91?

If you can handle the change from AAs (PRO-91) to a proprietary
NiCd battery pack (BC245XLT), I say go for it.

Only to a degree. If the signal fades out altogether, no amount of
AGC is going to help.

>I also want the unit to scan channels, and have a auto store search
>facility.

You're talking about something like the NRD545, but that's £1200 minimum,
more with the VHF+ add-on. I took delivery of one yesterday, and it's a
superb receiver, but costs. Very difficult to find a cable to connect it
to a computer though! (Any ideas from anyone in respect of this elusive
cable will be welcomed).

Have a look also at the Icom IC-R75 which is a very nice unit and very
compact.

Think also of a secondhand NRD535 or R75, and there are plenty others
advertised in the small ads in RadCom, SWM, RT and RadioActive.

The AOR receivers are not to be sneezed at either. Drake R8B also.

If all the guy wants is a dead speaker until activity on the scanner, then go get a Radio Shack amplified mobile speaker. The circuit in there will power up the speaker when a signal is detected from the line in. You hook this up to your scanner's headphone jack and you've got what I think you're after. If not, then oh well. Back to the drawing board.

Regards,
Tony

Yes, I'll second that. I also have a Rat Shack PRO-2042 for the UHF/VHF and a Drake R8B for HF and, between them, I'm happy wil what I have. I'm happy I didn't go with the communications receiver that covers everything. The Drake, however, may be hard-to-get in England, and the Lowe's are great radios.

Thank you to all who responded, I took into account all that you had to
say. There was almost universal praise for the Icom 8500 with not a bad
word said about it. It also is now on special offer for UKï¿½ 999. So
thats what I have gone for. Thanks again all.

They would be arrested for eavesdropping on private communications, and/or relaying the information gained by eavesdropping to a third party.

These are not activities that you are forced to carry out because you happen to own a scanner.

You are the one arguing on a false premise.

Your line of reasoning would contend that UK has laws against cricket bats, because you would be arrested if you happened to hit somebody with one.

> > The laws were made primarily to set out clearly how far the State could go

> > intercepting the communications of ordinary citizens.
>
> Yet the State prosecutes citizens who intercept the communications of the
> State. Obviously, your interpretation of the legal situation in the UK
> differs from that of the government. Guess who will win that argument.

The legal situation grants the State the right in certain clearly stated circumstances to intercept the private communications of other people. IMHO this is a position worth contesting, but that is another story.

However, my interpretation of the law included citing the actual law and an explanation of how it can be used against operators of scanners.

You, on the other hand, are interpreting a legal position that you clearly have little knowledge of. Try familiarizing yourself with the real legal position before lecturing others on their interpretation.

hi,
i just have room for one antenna, and was wondering if you had any
opinions which was the better bet for all around scanning.

i primarially listen to:
900 mhz
800 mhz
484-508 mhz
123 mhz
46 mhz
shortwave broadcast
ssb

what do you you get the best results with?

thanks,
N0JAM

There's nothing wrong with your antenna. You could probably get an even
better signal if you put up an antenna tuned for your frequency range, but
that would cost some $. If you decide to buy an antenna be careful of all
the hoopla. Antennas that advertise that they cover all the bands probably
don't, or atleast they don't cover them very efficiently. Your best bet is
if you want to cover a specific frequency range is to got down to your local
Ham Radio store and buy an antenna that is designed for that specific
frequency.

The manufacture or importation of these were banned the same time "cell capable" scanners were outlawed.

Meaning, if you can find some at hamfests, ads, or NG's, and they were here before these regs went into effect, they are legal to buy, sell, or even repair.

Of course, it would still be illegal to use one to actually monitor cellular phone frequencies.

I don't believe GRE® even makes them any longer, but check out their site at

http://www.greamerica.com/

I hope this helps.

I seem to recall that Radio Shack made a VOX unit for the
telephone to allow a recorder to activate when a call came in. I
wonder if this is still available? It was only a few bucks and could
easily be adapted for your purpose.

Most phones and scanners can be dropped 4 feet no problem if they land on a strong part of the case. It will show damage but they will still work. Motorola used to guarantee their hand held radios to drop 6 feet and still operate.

Hi there

This is the first time that I have posted to this news group and I wanted to ask your opinion on this Bearcat 144XL scanner that I just bought today from our local Radio Shack. The radio is a refurbished model. It has 16 channels, which is fine for me because there isn't much choice here to need 100 channels etc. The radio seems to work well as compared to my Pro 50 handheld.

Thanks

Andy :)

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=262111782

Several people have inquired about the scanner. Here is a typical reply:

Model No. 20-300
FCC ID: AAO20-300
S.NO. 039368
Little Sticker: 2A3

I have already added a disriminator tap to the unit.

As for the keyboard, the worst damage is to the center column of keys, 1,4,7,0,AM/FM. On those keys the carbon is completely etched away but the copper remains. I didn't intend to solder the pushbuttons to the PCB. What I had planned on doing was building a seperate keypad on a pendant and connecting the pendant to the PCB. The keypad is a 6x4 matrix, so there would only be 10 wires between the pendant and the PRO-43.

Nothing beats a resonant antenna. A weak antenna followed by a preamplifier will amplify the signal
as well as noise, so your signal to noise ratio will still be cruddy if you start with a weak antenna.
Try experimenting with long wires, even if you string them across your molding in your listening room.
An antenna made from a spool of wire including connectors will be more cost effective than an active
antenna, and might work better.
Al

> >
> > Icom R8500>>>Not bad,has the usual Icom weirdness as far as scanning
goes(I believe).I've played with a friend's for a few minutes,seemed
to be a pretty good performer.Usually,in ALL Icom radios,you can scan
ONE bank or ALL banks,you can't link them like everyone else's
radios.This is probably because Icom doesn't want to pay Uniden for
rights to bank linking circuitry.They got sued by JRC for patent
infringement on the R71A Passband Tuning Circuit.They lost...
> > Icom IC-R75>A nice radio,I don't like the looks of it much,but it seemed
to be a decent enough radio when I played with one at Universal in

June.Needs the optional filters to really be at the top.
> > JRC NRD545>My current dream radio,yeah,there seems to be some problem
in AM,maybe,but it kills in SSB,and I don't really care about AM,if
I want to listen to a broadcast station,I usually do it in SSB
anyway,and on the 545,you can do all kinds of dial twisting to help
dig out the signal.Some people say the vhf-uhf converter sucks,others
say it's great,but it probably won't be much better than a decent
scanner anyway for a cheaper price.
> > Fairhaven RD-500DX (Latest spec)>Don't know much,looks kind of neat,
but who knows,and how much will it be??
> > AOR 5000+>I'd rather have the Icom 8500,the AOR's too small,and I
don't think it's built nearly as well as the 8500.
> > AOR 7030+>A very nice radio that looks kind of odd,operates very
strangely,very annoying to me.It's too small,too many "menus",
and I don't like the tuning knob.Try it before you buy it,or make
SURE they will take it back!
> > Drake R8B>A very nice radio,ugly to me,good audio Sync AM works well,
I don't like the tuning knob,or the layout of the front panel.Not a
bad choice at all,but annoying to operate to me.
> >
> > I know the list is long but I am unable to reach a decision so all
> > comments on the above equipment are most welcome.
> > TIA
> > Paul
> > -<:-)
> >>>>>>And you might think about several used SW radios that are pretty
reasonable on the used market:
>>>JRC 515,525,535:All of them are great radios,I own a 515 and am on
my second 525.I traded away the first one,then got another one a couple
of years later.The 515 is my favorite radio of all the ones I've ever
owned.Doen't have a notch filter or squelch,but is built like a tank
(it's ALL METAL!!),and performs great on SSB.It has kind of "fuzzy or
wooly"AM audio,but a car eq and a decent speaker solve most of that
problem.The 525 has better audio,but hisses(the early ones much worse)
and a $5.00 filter gets rid of it anyway.The 535 has even better audio,
and variable bandwidth.Like the 525,a later one is preffered.
>>>Icom R71A:Horrible,horrible audio on AM,SSB sounds pretty good.With
the optional filters installed,a pretty decent choice.Kind of
small,with lots of small controls.Avoid the ones without Passband
tuning!(see about lawsuit above)Lots of them on EBAY!Good Luck!

Rubbish. In at least four states there's a 'roster' system where towies
can't attend an accident without being called first by the relevant
authority. Big fines if they do.

Paul,

For HF working and the kind of stations you are going for the Drake R8B is very good, I have had a R8 and R8A and they are a good functional radio, and the B adds to that.

The 8500 - too new here in the UK to tell you what they are like - but the spec is good.
R72/5 POS - The R71 was a radio anything later seems to be a scanner with HF :-(
545 - DSP but watch for audio problems on early units and then on later ones looks for odd "pops" when tuning or using the DSP filters.
5000+ - hmmmm good but older now and you can get better for less
7030 - They are good but you would regret it after about 3 months when you heard a Drake !!!

For VHF/UHF - Anything that takes my fancy is a handheld cause I like to take it with me, but if I was buying then I suppose I would want a Uniden/Bearcat or something like that they seem to work well and have a good warrenty.

Just my views :) Get a R8B Balun good long wire and a nice external speaker :) You'll be sorted.....

Steve

Hi Vince, Well I guess that is one way to address the issue.
Its is your decision to make.
However, I wish you would reconsider.

You have invested a lot of time and efffort getting where you are.
You are in a very good position to guide new hams in the right direction.
Our government has made a desision and like it or not we hams must live with
it.
If we sack it in with out any effort then our hobby is truly doomed.
We need poeple like you "fighting in the trenches" on the inside to keep
what we have.
Think of it as a new challange.
Ham Radio has and will continue to change with or without our help.
I would rather stay and help do what I can to promote what I consider to be
the good things about our hobby.

Like I said it is your decision but I really wish you would reconsider.
One man CAN make a BIG difference!
You probally have already and just do not know it.

And which states are they???
Queensland the towies sit by the road...usually near a well known
accident spot
they hear of prangs by scanners, CB or phone
there is no roster
they all just show up
I've even been rewarded a "spotters Fee" for informing a towie that
parked near a servo I delivered to of any prangs near by
and as for what I wrote below
I've heard it many times
the only roster they use is for stolen car recovery

4702. RadioMaster2000 - You asked for it, you got it

Newsgroup: rec.radio.scanner
Date: 2000-02-24 00:00:00 UTC
From: Danny Butler <dannybutler@one.net.au>
Message-ID: <38b50d19@pink.one.net.au>
Source record: 93369

Many thanks to all those that have sent recommended changes for RadioMaster2000.

I have taken them all "on board", and will be making the changes over the next few months.

In the short term, I have implemented a number of the important changes.

It has been good to see, that the intense testing prior to the release, has left only a few minor/cosmetic fixes.

Here they are...

1. Added a 1 Hz frequency step. Yes, the Radio will respond accordingly, even though the display indicates 10 Hz changes. Try setting the Mode to CW, and the filter to 50 Hz. Step RadioMaster2000 10 times watch the Radio Display change, and listen as you go.

2. Fixed a slight problem with F.Lock, it would not change.

3. RadioMaster2000 will not crash if you press any button when not connected to the Radio. I did mention this problem in the documentation, however, I have fixed it any way.

4. If the Radio is switched on, and connected to your PC, and then start RadioMaster2000, both will synchronise automatically. If you switch the Radio on after RadioMaster2000 is started, you will need to press the "Synchronise Radio" button under the Communications menu. This is different from version 1.0.0.

5. Changed the Windows and exe icon to be like a radio.

If you have already downloaded RadioMaster2000, and would like to try the update, download the "Update" zip file from my web site. Unzip it, and use those files to replace those in your folder.

Here is my website for the "Update".....

If you have any problems or questions, please contact me....

First, I think you need to decide whether you are in the market for an HF receiver or a do-it-all, DC-to-daylight, HF/VHF/UHF model?

For premium HF listening at a premium price, the NRD and 7030 get top scores. Spend less, and you get less, like the R75.

Since you already have a decent VHF/UHF radio, you might not want to go for a HF/VHF/UHF model. Such models, like the 8500, RD500 and 5000 will outperform the 2042 on VHF & UHF but look at the cost differential here. Perhaps you'd keep the 2042 as a casual scanner and devote your main listening to your high-powered, feature-laden HF/VHF/UHF receiver? All three of the ones you listed will do quite well on HF but not as good as a dedicated HF receiver.

A competitor to the RD500 is the AR3000A. Less money but less features as well.

So first you have to decide whether you want the best HF you can get, or one radio which does it all (which will typically have more features and flexibility but give up some performance on HF).

Best of luck with your decision!

Strong Signals,
Rich Wells N2MCA

Look on the RS web site for the catalog number for the 2036. Call the RS 1-800 number, give then the 2036's catalog number, and ask them if they have the tone board for that scanner in stock. They will be able to look it up on the computer and tell you if it's in stock.

Actually, my point was that there are NO laws against scanning in the UK.

Laws that date back to 1949 that relate to the interception of mail, telephone and wireless transmissions may be used against people who use scanners -- but that isn't the same thing at all.

The laws were made primarily to set out clearly how far the State could go in intercepting the communications of ordinary citizens.

Bill,

You might want to research all of Vince's posts before you fall off of that high horse you put yourself on. True enough, he contributed in a positive manner before the restructure issue, but has been nothing but condescending since.

I think one previous post summed it up as a loss if Vince leaves, but he has to grow up and get over it.

Lets not loose perspective here. Actually I might have lost perspective, I have been working on code and Satellites for the past couple of months. :-)

Then your point has no value, being based upon a false premise. If there are no laws against it, why are people arrested and/or cited for doing it?

> Laws that date back to 1949 that relate to the interception of mail, telephone
> and wireless transmissions may be used against people who use scanners -- but
> that isn't the same thing at all.

You know, people use the exact same reasoning here in the United States. That's why we have had an explosion of "new" laws to make existing criminal acts MORE illegal.

> The laws were made primarily to set out clearly how far the State could go in
> intercepting the communications of ordinary citizens.

Yet the State prosecutes citizens who intercept the communications of the State. Obviously, your interpretation of the legal situation in the UK differs from that of the government. Guess who will win that argument.

Will,

Sorry to see you go, as maybe you had some positive things to
do for HAM radio in the past, but the bottom line is if you're going
to be negative about the changes, and towards the new people,
well, so long, HAM radio doesn't want or need you.

Regardless of your personal feelings, you should be presenting a
positive attitude and be a role model for anyone new to the hobby.
Bitch if you want to, but work for change, don't whine that it's not
how "I" remember it and threaten to pick up your toys and go home.
Just remember, the newbies might just have their own toys.

I'm sorry, (I really am, but not for you, for the hobby that has
'hidden' people with cancerous attitudes for too long) but things
have changed. It's just too bad if you and Vince don't like them.

And I have been a licensed HAM for about 19 years, I'm not
one of the 'newbies' you seem to have a pathlogical fear of.

First I have to ask... "Horse shoe stew"???

But I agree... In that I think the conflict of the pro-code vs the
no-code
is what brought down the house of cards. It was built up for so
long as the holy grail, the savior of HAM radio, keeping the
non-believers at bay, that when it finally was recognized that
something had to be done, there were so many people sick of
the arguements, sick of the atttitudes, and sick of the fraudulent
claims, that they just wanted the whole thing to go away.

I really do think that if we had 'moderated' the influence of CW
over the years in how it restricted HAM radio rank advancement
we'd still have it, at least to some extent, in a multi-tiered form.
But the bastions of no-change brought about their own death with
a backlash against their arguements and attitudes.

Hey, I like CW, but I felt the arguement would be the death of HAM
radio. Turned out it was close, but not quite. It was a suicide, but
only of the CW-or-die crowd.

Good

You obviously have the same problem interpreting British law as you have interpreting British humour.

The important point to remember is that *we* can actually purchase scanners that have full receiving range and *you* cannot.

John-

Thje San Bernardino/Arrowhead, Riverside, and Rancho Cucamonga CHP offices are all on 39 MHz systems since last year. Indio and the L.A. County offices are still on their 42 MHz channels but will someday probably change to the new repeater based system.

For more info you can go to www.latraffic.org and cllick "Scanner Freq's"

> > can't do much dawdling and get hime in time to meet the landscaper
> > who's putting in my new rose bushes.

> Must be so jaded as to put the rose bushes first. :-)

Not jaded, but I promised I'd be there on time and a promise is a
promise. It would have been wrong for me to indulge myself by waiting
an extra hour to see the Orbiter land. He's got better things to do
with his life than to sit out in front of my house waiting for me
while I'm watching NASA SELECT until it's time to dash out behind the
building.

> Fortunately for you, it worked out for the best.

I figured I'd be able to hear the boom and pull over to the side of
the road and watch it land if it did come in here. The Orbiter's big
enough to see from quite a ways away and the black belly makes it easy
to spot; it's not like trying to see a white T-38.

I still regret the end of routine landings at EDW, to be honest. I
only missed three (and I was out of the country for one, out of the
state for another, and out of town for the third), including all five
ALT flights and I was out on the ramp as a host for most of the
landings that we opened the facility up for. I understand the cost
and time constraints that drove the change to KSC, but I miss that
visceral thrill of seeing the Orbiter drop out of the sky, generate
its distinctive boom, sweep around the HAC, and dive down to the
runway, throwing the gear out at the very last minute.

I was able to do a lifting body/Orbiter/low L/D approach in the
backseat of a TF-104G almost 20 years ago and I still remember the
thrill of the dive to the runway. It felt as if we were pointed
straight down and the runway came up to meet us _fast_.

There's a roster system operating in NSW. Any tows required by Police, for stolen car retrievals etc, are on a roster system. This was to stop individual Police earning spotter fees and backhanders, a mild form of corruption.

Ordinary bingles operate on the first in - first served basis, where the towies mostly park in view of a blackspot.

Bought it new and had it modified for full coverage and for reaction tuning (used with a Scout). The same port allows one way communication with a computer. You can program the radio using Hyperterminal.

All boxes, accessories (charger, cig. lighter cord, antenna), books and the little piece of protective plastic covering the display (is still intact) are included. Comes with new batteries.

$450.00 shipped to you in US

In my area they look like 6 meter beams with an inbetween a horizonal
and verticle polarization. They all point to the same general direction.
The best we can tell is that it is pointed towards an alarm monitoring
station. Taco Bell, Burger King, Arby's all use the exact
antenna....this is unusual for a TV antenna.

Sid,

Tha antennae you are tlaking abt are for "piped" in music....resturants do not carry commercial radio, so they pay for non-commercial music from another source. I do not re-call the proper term for this service, sorry, but that is all they are is recieving antennas for music (many types) with out the announcers and without commercials.

Yes it is still available. In fact, there is one available that
may be plugged into any phone jack to monitor any activity on that
line whether the local extension is lifted or not.

I can attest to that, I dropped a Motorla HT-600 about 25 feet from a ship radar mast, it hit the flying bridge deck (steel). The battery broke but I put a new one on and the radio worked fine.

Here in the Minneapolis-St Paul area there are a bunch of music channels operating in the 956mhz and 959 mhz area. They get good range, as I've seen these 900 mhz yagi's on fast food and retail stores a solid 50 miles out. A call sign lookup shows the call WNTL507 and WNEV428 and are "operational fixed service" class of licenses. It is the background music service in local retail outlets. It is interesting to experiment with the deemphasis circuit of your scanner and see if you can widen out the fidelity of the music.

Happy listening.

My interpretation is based upon reports of the actual application of those
laws by the police.

People in the UK get arrested for monitoring police communcations. Ergo, it
is not lawful for people in the UK to monitor police communications.

End of thread, at least from here....

NSW for one. It is also illegal to receive or offer a spotters fee in NSW.
Rostered tows are used for prangs, stolen and abandoned vehicles.

I want a good computer controlled scanner. Is the WinRadio 1550i a good choice or would the Optocom be better? Celluar is not really important but would be nice to have. I am looking for a super BandScope in the software and the ability to determine the deviation of FM signals would be desirable. Can anyone recommend a good scanned that will do all that?

ButterNut made a scanner antenna a while back that was a great performer on
all those bands.
If you can not find one I would suggest the largest discone that has a
vertical element for the lower bands like the ANT9 that Grove Enterprise
sells. Here is the URL:

http://www.grove-ent.com/SCANNERANTENNAS.html

Bob Grove can help you make a good choice if you will take the time to call
and ask his advise.

Keith, I thought you got your ham ticket 20 years ago?
Why would you need to pass a code test now?
Perhaps you are a lower class of ham who never upgraded.
Is there something you are not telling us or do you just make up your story
as you go along?

A lot of the "codes" are sections in the penal code.

If you know a local cop ask him for a copy of their code list. It isn't totally secret, as they publish a "cheat sheet" for their own staff.

Bill Ruck

4789. ABOLISH MORSE CODE BEFORE IT'S TOO LATE!

Newsgroup: rec.radio.scanner
Date: 2000-02-26 00:00:00 UTC
From: dconti2@bellatlantic.net
Message-ID: <38b7732e.3007332@news.bellatlantic.net>

This is the heading in the recent "closing comments" section of Monitoring Times, written by Bob Grove.

It got my attention, as I'm sure I did yours here, or you wouldn't be reading this post.

What intrigued me most about his position was the statistics relative to enforcement action by the FCC as follows :

Of all the license suspensions, revocations or reviews by the FCC in past six months for RULES violations, 85% had passed their MORSE CODE test!

Of the licensees cited for LYING on FCC documents, falsifying call sign apps for non-existent clubs, and taking part in illegitimate testing sessions, 91% were certified as code proficient, with the largest representation being the EXTRA class licensee.

He goes on to exhalt the presence of Technicians in the hobby, and rightfully so.

These stats above cut through all the rhetoric I;ve seen in the groups regarding amateur radio test requirements.

After a hiatus of about a year, I have returned to 2M and 440, to find a veritable wasteland. WHERE IS EVERYONE? I feel like the guy in the British Ariways commercial who asks the same question. However, in this case, all the hams have NOT gone to London!!!

Here is where I think the Hams have gone...

5 or 6 year no-code techs, who represent the last "wave" of new hams after rule changes, such as myself, being restricted to 2M, 440 , and 6M, have become bored with the lack of activity of late. Yacking across town or across the state is nice at first, but grows old with time. Many have simply dropped out like I did a year ago.

The "elders" of the hobby, or Elmers, as the are often called, are acting more like Elmer Fudd, hanging onto old radio values, and silly elitist attitudes, and as we all must do, they are dying off.

brand new candidates who would've been attracted to this hobby in past generations, are on computers, and on the internet where they can not only talk to others in far away lands, but can wave at them in live video, and so on. No CODE required. For that matter, NO LICENSE required.

The 2M , 440, and 6M amateur bands are valuable radio real estate that will be gone, sold off to another Nextel-type company, as a result of our lack of interest.

All because we just can't let go of that damn code....

See you at the museum.

I'm not from New Jersey but don't you have an instruction book that came with that. One of my friends never read is instruction books for his gadget and he always ask me about them. Me went I by something, I always read all the book first to know all what it can do and after I revise it until it get in my thick skull of mine. Did you take a look at your book honestly?

Jou, I myself did several attempts to master CW speed 60.
It became soo boring everytime that I abandoned at tempo 30 or so.
Several times in the last 20 years.
Had my Morse trainer in the car peeping at me during way-to-work,
took Morse casettes with me in the toilet,
listened to beacon blurbs on shortwave,
used computer programs running during cozy evenings with wife,
taking my dog out for a walk with earphones (in my ears, not dog's).

I CANNOT SEE A REASON WHY I SHOULD LEARN MORSE CODE!
Not anymore.

I will not improve my CW skills above tempo 25 or tempo 30
which I would accept as
"Amateur radio emergency communication basic skill"

But I hate and oppose the limiting of access to amateur radio
by preserving inappropriate restrictions .

I could never figure out what was so difficult about a 5 WPM code test. Sure
I had to make a few attempts myself but I did pass it at age 14! It just
took some effort on my part. As far as extra class hams acting like children
on the radio, there are always idiots out there. These guys just happened to
pass their code exam. For someone to associate 21 WPM with how someone
behaves is a big leap of faith.

Just goes to show you can "prove" anything with statistical hand waving.
For instance, 100% of those offending hams use toilet paper. Maybe the
FCC should outlaw toilet paper.

Oh, you've gotta be kidding. If it is the the beginning of the end the presence or absence of Morse code speed testing has nothing to do with it. It's due mostly to the lack of time to spend on a hobby where you sit for hours and chat on a radio in todays world. That's why Ham radio is still popular in retirement and handicap communities.

Mark, K1MKF

Since im a student at a school, i dont have access to my scanner from 7:00 AM to 3:00PM, so I had an Idea.

I got myself a VOX Recorder, and a hookup, and I will have it record what I scan while Im away.

But Since Recording Telephone Conversations is Illegal, I thought that may effect this too. Is Recording Police/EMS/Fire Conversations Illegal? Please explain my limits...

Just supplementing the existing system. On Interstate 10 from the
LA/Berdo county line to the Berdo/Riverside county line the mobile
receive frequency is a 39 MHz freq which repeats the mobile transmit 42
MHz freq. From the Berdo/Riverside county line to the Arizona state line
is the same 42 MHz freq pair as it has always been.

LA and Indio will remain on the 42 MHz freq pairs. There are no plans at
the moment to reconfigure the radio sites for duplex operations in
Indio. The LA system is being considered to have the radio sites
reconfigured for duplex operations with 42 MHz pairs and maybe a mixture
of 42/45 MHz pairs.

OK, I dl'd BC245INT and tried that, and I also found something called "Softrol" that can work with BC245's. Both connect just fine, but don't offer much in the way of useability or ease. Example: When searching, I find WinScan's hit logging to be helpful, but neither of those two app's will do it.

But the big thing is being able to upload, download, and export/import freq files with alpha tags. With WinScan this is easy. BC245INT appears to be able to import, but I haven't quite figured out the file format yet and I don't have any user manual. All I get is a bunch of gobbledygook in the alpha tags (the freq's dl from the scanner easily). I haven't been able to decipher the method in Softrol yet for this (Softrol supports multiple scanners so the UI is a little more basic).

So I'm left with WinScan again, which is good but lacks such basic functionality as being able to edit the alpha tags (instead of deleting and re-writing from the end). I tried about 20 times to dl SCANCAT Gold. I was able to connect one time and saw a glimpse of what looked pretty good (albeit pricey). As of now, though, I cannot make the connection. When I ping scancat.com I get "TTL Expired in Transit" every time. I cannot find another place to dl this demo.

If someone has a copy of the ScanCat demo and could email it to me or post it here, I'd be much obliged (as would the author(s) of ScanCat, I should think). Any other feedback would be appreciated, too. Maybe I'm being too picky.

Dan,
I learned code at 5WPM, I studdied for classes, I went to Ham Radio Outlet (to purchase several hundred dollars worth of radio equip.), I went to a club meeting, I talked on the air, I got out of the hobby!!!!!!!(Club meeting consisted of bickering BTW).

ARRL has an elitist attitude, Gordon West is an egotistical S.O.B., Ham Radio Outlet WAS full of rude personel (they burned down recentley.) and the traffic on the airwaves wasn't much better than I experienced on CB, I sold my equipment.

With a scanner, cell phone, computer and fax, I don't need anything Ham Radio has to offer. Nor do I think It is appealing as it once was to the youth of our nation.

I went to the Local Library Thursday night and right there in the foyer was a display of QSL cards, keys, photos and equipment from the glory days of the hobby. The Item that really caught my eye was a satin blue jacket with a large inscription on the back, "Buena Park Amature Radio Club", intrestingly, there was a letter placed right beside it that told of the club's history right up to 1999. It ended with a line that said "Club Disbanded."

Your precious air bands are being used less and less as the FCC and ARRL find it extremley difficult to come of age and appeal to the potential customer base of future radio owners.

Yes, I do belive that one day the bands will be sold to a private communications company if only for the FCC to get a quick cash infusion. The top dogs of that agency don't really care about Hams or Ham Radio, they only are concerned with their jobs.

The real guardians of the airwaves were the ARRL and the Hams themselves and as of late they both have proved beyond a doubt that neither of them is capable of keeping this hobby up to speed. The ARRL is a condescending dinasaur and the Hams themselves have been bickering amongst themselves for far too long.

Yeah, I'll see you in the museum sooner than later I think.

i recently bought a radio shack outdoor scanner antenna model 20-176 it is about 12 ft above the ground and placed in the attic. it has greatly improved reception on just about all frequencies but i primarily use it to listen to the marine bands. but im not able to pick up people who are off shore, and im not looking to get 15 miles out i realize that but i was wondering if i place it outside will it work even better or just minimal improvement. also im using a pro-91 would a base scanner pick up frequencies better than a mobile

thanks

You can record police/fire/etc, but it would be ilegal to divulge what you record, I suppose. I still wonder if, other than maybe disturbing the peace, it would be illegal "divulging" to broadcast your scanner's audio over a "zillion watt" loudspeaker to your entire neighborhood; or, by extension, internet "broadcasts" of police/fire radio traffic.

harry
LAPD North Hollywood Shootout audio (tape was released by the LAPD, so I guess/hope it's legal to have it at):

Stats don't lie, however people use them in incorrect fashion to
prove their points. I seriously doubt there is a correlation between
knowing and using morse code makes you a law breaker. This asinine logic
is the same as when I hear someone say that because a few hunters are
disrespectful of other peoples property, all are that way. NOT!

Are you kidding me?

Another brillianst statement. No, the Congress makes the laws, the
FCC enforces them. The stats cited are based on FCC enforcement
action. Period.

Remove foot from mouth and learn to read.

However, if this is in fact nonsense, then so be it.

Conversely,

If the "no-code" Techs were the low-life CBers the "advanced" hams
claim them to be, wouldn't the stats be reversed, with the no-code
Techs being the Lion's share of violators?

Finally, an intelligent response to this posting......
>
>Dan,
> I learned code at 5WPM, I studdied for classes, I went to Ham
>Radio Outlet (to purchase several hundred dollars worth of radio
>equip.), I went to a club meeting, I talked on the air, I got out of
>the hobby!!!!!!!(Club meeting consisted of bickering BTW).

I found the same thing here at local clubs. If you were a no-cod
tech, you were dirt. The Elitists hung around and bickered about
nothing.
The niggest thrill was a silly contest to see if you could contact
people in every state in union ....Duh...I must be missing something
there...

> ARRL has an elitist attitude, Gordon West is an egotistical
>S.O.B., Ham Radio Outlet WAS full of rude personel (they burned down
>recentley.) and the traffic on the airwaves wasn't much better than I
>experienced on CB, I sold my equipment.

Agreed..

> With a scanner, cell phone, computer and fax, I don't need
>anything Ham Radio has to offer. Nor do I think It is appealing as it
>once was to the youth of our nation.
>
> I went to the Local Library Thursday night and right there in the
>foyer was a display of QSL cards, keys, photos and equipment from the
>glory days of the hobby. The Item that really caught my eye was a
>satin blue jacket with a large inscription on the back, "Buena Park
>Amature Radio Club", intrestingly, there was a letter placed right
>beside it that told of the club's history right up to 1999. It ended
>with a line that said "Club Disbanded."

WHat a shame...

> Your precious air bands are being used less and less as the FCC
>and ARRL find it extremley difficult to come of age and appeal to the
>potential customer base of future radio owners.
>
> Yes, I do belive that one day the bands will be sold to a private
>communications company if only for the FCC to get a quick cash
>infusion. The top dogs of that agency don't really care about Hams or
>Ham Radio, they only are concerned with their jobs.

It is unreal just how lucrative a spectrum of radio frequencies is...

> The real guardians of the airwaves were the ARRL and the Hams
>themselves and as of late they both have proved beyond a doubt that
>neither of them is capable of keeping this hobby up to speed. The ARRL
>is a condescending dinasaur and the Hams themselves have been
>bickering amongst themselves for far too long.

Certainly there has been some wrong comments aimed at no-codes, some
may have been justified because of the "attitude" toward learning cw.
Its unfortunate that childish attitudes on both sides of this issue
result in more of the same, one side reacts by spewing more nonsense,
then the other counters with even more, a never ending cycle, but this
idea that stats prove anything is way off base.

Actually there are a couple services I've heard of that do that. Basically
you get the page, then push a button on the pager and it actually plays back
the message, up to like 60 seconds. I always figured they transmitted those
things digitally, though. Hmm.

4843. Why do radios have modes like AM, and FM?

Newsgroup: rec.radio.scanner
Date: 2000-02-26 00:00:00 UTC
From: David Rice <drice_lol@mindspring.com>
Message-ID: <89ac7sfmk1@nntp5.atl.mindspring.net>
Source record: 93281

I was reading an owners manual in my ham radio and noticed that it can transmit and received on different 'modes', I also noticed my scanner can receive on different 'modes'.

I was wondering why we have different modes, and what do they do?

Thanks for your time,

--David

The scoop is DON'T DO IT!!! I have a friend who is gonna spend the next 5 years in a federal pen for importing an illegal scanner, It is allmost the same as smuggling in dope. All major US customs entry points now (or will soon) have canines that can "alert" the agents to packages that contain radios with the wide open cpu's in them. I have a very reliable source who has told me of a special unit that actually tracks the forbidden scanner from the origanal shipping point, right to your door. Kind of makes me wonder if some of those overseas dealers are really just fronts....

erhu@pacbell.net wrote:

>With a <...> computer <..>, I don't need
>anything Ham Radio has to offer.

Internet's fine if you don't mind being leashed. You're helplessly dependent upon untold billions of dollars of computer equipment belonging to thousands of corporation, interconnected by millions of miles of cable, staffed by thousands of workers putting in tens of thousands of man-hours per day to keep that incredibly complex system running.

Hams, on the other hand, have no such dependence. It's the *only* communications medium in which any two operators anywhere in the world can communicate directly without using government or commercial communication services. Those same two operators don't even need to purchase commercially-built radios -- they can build them themselves.

Jeff

Radio began in the old days with AM waves, when FM was later found to be much clearer most changed over to it, except air, as they had too many complex systems in place. Go to your public library and check out the ARRL Handbook for Radio Amateurs for all the details....

Description

PRO-43 scanner with broken keypad. Previous owner stored unit without
removing batteries. Batteries subsequently leaked over keypad and ruined it.
I have used it successfully by closing the PCB contacts with a pair of
tweezers. Presumably you could fabricate an external keypad. I have bought a
fistfull of SPST switches for this project but never tried it since I
already own two other scanners. SPST switches are included.
Sold AS-IS. Buyer to pay shipping.

Final bid price was $81. Not bad.
If you ran over it with a car it would be trash. Forgive me for calling it
broken. Maybe I should have said it was "keyboard challenged"
You could make a movie about this not broken scanner. "A Fistful of
Switches"
"For a Few Switches More"

Yup. There's a 132nd and Bush in the Portland area. That clip was taken from
the first season.

Hello..

A friend gave me a PRO-2009 scanner,and i was wondering if anybody has any info on this thing.. Mods,or otherwise.. i have looked around the net a bit for mods and stuff but i havn't found anything as of yet..

I did find the discriminator chip output,and all that fun stuff.. heres a few of the chips in it.

Discriminator MC-3357P

GRE7831 -not sure what this chip is/does.. perhaps the display driver chip?
MP4406 it appears to be made By Texas instruments.. no info found on thier site
Both numbers appear on the same chip..

GRE-7803A - not sure waht this chip is/does

MC12013 - Dunno? mounted close to the GRE-7803A

Thanks!!! I was hoing to find some frequency mods,or maybe scan rate mods (its is SLOW!)

SkRewY!

Hi.

This site:
http://support.tandy.com/support_electronics/doc21/21312.htm
gives a list of what the chips are and what they do. I'm not convinced you can do much about the slow scanning - it's usually due to the relatively long time it takes the PLL to lock in to the new frequency. I had a crappy hand-held scanner years ago (I forget the brand name) which scanned really faast. Trouble was it never heard anything as it never really tuned to a new frequency while scanning!

Good luck with the hunt.

Ken

Hi , I am curious about near field receivers . I hate to admit it , but I went out today and bought a RS 22-306 counter . After i drove to three RS stores . Typical .
Any way, I thought I found a a cheap "point and read the freq " toy . I would have to be right next to 'them' and happen to catch the transmission at the typing / transmission time . Mabey RS spec'd this unit for a test type instrument , and the attentuation circut can be tweaked or adjusted to better suit what I need ?
Is there any kind of unit that can be made / modified / bought that will do what I want ? Some times it is uncool to be so close with wires and antenna's . Will opto-electronics model work in real life at 1200' ?
Any info is appreciated and needed .

I recommend the RELM HS200 portable, but the RELM MS200 mobile
I tried had too much intermod.

Instead of the HS200, consider the newer Uniden SC200 portable.
See my SC200 review in March 2000 Monitoring Times magazine.
It has alpha display, PL and DPL, and a computer port all for about
$200.
Too bad it uses a proprietary NiCd battery pack. I liked the HS200 AA
battery
setup.

Thanks for the feedback. Actually, I should have no trouble hearing the air units since they're close by (the ones I've been attempting to follow) - maybe 5 miles. Last week I heard an LA County Fire helicopter no problem; communicating with the fire crew about his LZ, etc. I even also heard him notify dispatch that he was landing at USC Medical - At least 20 miles away from me. The Fire system appears to be done differently.

483.0875 is the freq in question at the moment; this is LASO's "A-TAC 1" channel, which was used in the two previous "containment" activities I had listened to. I have not been able to find any freqs *specifically* for Air Support, like LAPD has.

Also, now that I think about it, a couple days ago I caught a foot pursuit in La Mirada (again, 20 miles away in Orange County) with the OC Sheriff's office. A helicopter arrived during the foot pursuit and directed the deputies on the perimeter of the containment where to intercept the fleeing suspect. I caught all of that, too. So this LASO air thing is bizarre. I may just ask one of the deputies on my Metrolink train one day about it.

BTW, what is this "PL" and "CSQ" you referred to?

try contacting your local/county police department and ask them for them.
That worked for me when I lived outside of Atlanta. You can also see my site
and try the web rings that I belong to. Just click on list for each one of
them. I belong to 3 different web rings for scanners. You might also find
some other frequencies that are nationwide on there.

I'd be interested. I'd like to be able to extract data too (to put in my
database).

>All because we just can't let go of that damn code....

You Should Look at Irish (EI) Licensing if you want to see stone age.

We don't have Amateur Radio Licenses we have Radio experimenters licenses, I have to apply individually for each mode and band I wish to use detailing my equipment and my intended experiments!!

For HF Privileges I have to pass a 12 WPM CW test (which I am studying for now), I am then restricted to 7 & 14 Mhz Only (@25W or less) for the first year (or first 250 Contacts with QSL cards to prove) I then have to apply in Writing to the ODTR to use all the other bands and modes.
Ireland has been a member of CEPT for years but the Irish Radio Transmitters society has made no representations to the ODTR (Irish Equivalent of the FCC) to have Irish Licensing brought in line with the rest of the CEPT Countries

BTW the Office of the Director of Telecommunications Regulation (www.odtr.ie) is bang up to date it's just that they leave it up to the IRTS (Irish radio transmitters Society) to propose any changes to Experimenters license conditions. The IRTS has no interest in modernizing Licensing and have not asked the members (Of which I am one) our views. The irts takes the view that reducing the cw requirement or indeed any changes to the Licensing system would lower standards and be unfair to those that have done it the hard way.

I am going to Sit (And hopefully Pass!) my CW test in the next few weeks , I will not feel hard done by if this requirement was reduced or scrapped in the future.
I have held a Class B license (50 MHz and above) for 10 years, I have built much of my own equipment
2M Linear Amp and Pre amp
50 Mhz Transverter and 50 Mhz power amp
10 Ghz WBFM setup
I can think of may radio related projects that I could be doing with the 40 or so hours it is going to take me to get my CW speed up to 12WPM

>See you at the museum.

I guess I won't be working you in CW during my first year then (Whilst of course I am conducting legitimate Experiments into the nature of HF

propagation of course.)

4888. Voice/Data on the same Freq?

Newsgroup: rec.radio.scanner
Date: 2000-02-27 00:00:00 UTC
From: Peter Khor <peter.khor@worldnet.att.net>
Message-ID: <06%t4.20224$tk7.1321725@bgtnsc05-news.ops.worldnet.att.net>
Source record: 93288

Was searching around 152MHz region, and came across what seem to be voice mail messages and pager tones(?) on the same frequency; the voice messages would repeat twice over everytime. My question is, if this is a pager freq, what's with the voice mail? As far as I know, I don't know of any pager type devices that will receive and play back voice messages.

Any info would be appreciated,

Peter Khor

Find "TalkPCR-1000". I wish I had the URL handy. You can download it for free and paying the registration will free you of those annoying reminders that pop up at you.

It is a million percent better than the ICOM software, which actually isn't terrible.

Follow-ups set to just r.r.a.misc:

In rec.radio.scanner Daniel M. Conti wrote:
>Of all the license suspensions, revocations or reviews by the FCC in
>past six months for RULES violations, 85% had passed their MORSE CODE
>test!

This is easy to explain: On HF, if you so much as sneeze, half the world could possibly hear you; HF violators stand out and need to be nailed (NAL'd) to save face internationally. OTOH, on V/UHF, due to it's limited range, the FCC would need to have a monitoring station in each and every community to catch all the violators.

I suspect that there are many, many more violations committed on V/UHF than on HF, but they go unheard by the FCC.

That the HF riff-raff are coded just shows that *anyone* can learn the code -- even scum-bags. But if you tune down to the low end of each band where code is being used, you won't hear any of the non-sense which occurs on SSB.

>I'll admit that Motorola makes some tough stuff,but after using a
Motorola "Nextel" peice of shit for about the last year,I don't
think I want to see the word Motorola on anything I talk on for
a long,long time.Those radios were torture!EVERY morning,with a
very few exceptions had a dead period where "direct connect" was
useless.Most times,it sounded like the other person was drowning,
sometimes it was "user not available",or my favorite "try again",
and the always welcome "system failure".The part that cracked me
up was we HAD radios that worked ALL the time,sounded great,and
always could be depended on,and NEXTEL turned off the repeater,
and we were forced to go to to the Nextel setup.Oh,they claimed,
a cellphone,pager,and 2 way radio all in one! For a good
price!The ONLY thing that worked MOST of the time was the cell
phone.Sure it didn't sound as good as my old analog phone,but
it worked ok.The pager worked about 10%(no joke) of the time,
I'd get pages like "Cal# gorkdfk!! KK008655443"!I knew I was
supposed to call someone,but who,I never knew!After an hour or
so I'd get a call(on the REAL phone)"Why the hell didn't you call
me?"One of us "accidentally" threw his "Nextel" down a flight of
concrete stairs.IT STILL "worked"!!
Motorola does make some tough pieces of shit!So'd my dog when I
lived in Vegas!

Yeah,sometimes they slowly lose it due to parts aging,and vibration,
but the usual cause it getting hooked up to a Satellite dish,or just
blasting it with a nearby ham or CB rig and Linear amp.I would be more
looking into the antenna and coax.Especially if the antenna is
fiberglass.Water can and will wick into the base of most of these
antennas,and ANY water will destroy the coax,as far as VHF and up goes.
As fas as getting it fixed,Icom,or any authorized service center can
fix or align it.Mine is sensitive enough,but it's a little off freq,
not enough to bother anything unless the transmitter is off a little
the other way,then it's scratchy sounding.
If there is a local WX transmitter on 162MHZ,you can check it easy
enough,take a couple of feet of wire and bend the end so it fits in the
N connector and see what you get on 162.55(or your local freq),and then
see what you get with your antenna.If it's even close,the antenna or
coax is bad!

You are in luck! Yes, the pro 2022 is new enough that Radio Shack still has the EL light for the display, it costs about 23 bucks plus 4 for shipping. They can put it in for you or here is some instructions for doing it yourself, just be sure and use a little soldering iron and not a gun to avoid damage.

You need a 278-120 for $3.49 on page 198 of the catalogue that costs $2.95 if you ask for it cold, if you act mildly interested in the scanners that all cost $200 or more now unless they are discontinued or on sale, they will give you a catalogue free if you ask for it as you walk out. Try not to hook several adapters together to accomodate them if they don't have it in stock, as each adapter added gives you a loss of signal strength, something like 30%

Rather specialist, wavelengths of less than 30cm
really do allow
for high gain antennas, with very narrow beamwidths.
Cable losses
become very noticeable and/or untenable.
Mobile "flutter" quite
severe, mobile systems need many more base stations to
cover a given
area. Most useful uses are direct fixed links, point
to point, satellite
(line of sight), low range etc.
So - mostly un-interceptable and/or digital.

1215... Civil airport radar, to 1350 & radiolocation,

: I did find the discriminator chip output,and all that fun stuff..
: heres a few of the chips in it.

: Discriminator MC-3357P

: GRE7831 -not sure what this chip is/does.. perhaps the display
: driver chip?
: MP4406 it appears to be made By Texas instruments.. no info
: found on thier site
: Both numbers appear on the same chip..

: GRE-7803A - not sure waht this chip is/does

: MC12013 - Dunno? mounted close to the GRE-7803A

: Thanks!!! I was hoing to find some frequency mods,or maybe scan rate
: mods (its is SLOW!)

: SkRewY!

You can try replacing the ceramic resonator with either one with a higher
frequency, or a crystal of, again a higher frequency.
This will speed things up...BUT....
1. go too fast and the unit will become unreliable
2. go too fast (but not as fast as #1 above), and the unit will SEEM to
work, but receive nothing.
3.doing this will shorten the scan delay time.

You are ABSOLUTELY RIGHT, it is worse than I thought - 2m IS a
WASTELAND. I am a 12 year TechPlus, and I dropped out 4-5 years ago.
Just dusted off my equipment, and started monitoring 2m - about the ONLY
thing I hear is packet activity!

The code wasn't the problem - it was the ignorant, elitist, selfish
attitude the old farts had.

Depends on what your roof is made out of. If you have a metal roof, then moving it outside would be a big improvement. If you have a regular wood roof, with the usual roofing materials, then it wont make much diff.

Sorry to burst your bubble but your last statement is totally incorrect. Why would we loose the 6, 2 and 440 bands because of the code? These bands are for the no-code and when a person does pass the code test they move away from the 6, 2 and 440 bands for HF. No matter what you do, eliminate the code or pass the code test, you will not stay on 6, 2 and 440 but will go directly to HF.

Also you answered you question about the enforcement. The no-code techs do not get on the radio as much as coded amateurs. They also do not get on frequencies that can be heard all over the world. If they fail to ID properly or allow their wife to talk on the radio to them even though the wife does not have a license they never get caught because they are on frequencies that travel a vary short distance.

Doing away with the code will only bring the end to the VHF/UHF/SHF bands as all new operators will go directly to HF.....

Local clubs here treat everyone the same. Its what you put into the
club that what's count. If you go in with a chip on your shoulder
then sure there will be problems with the other hams.

PS> Is the a California thing?

4919. Golf Carts have data device?

Newsgroup: rec.radio.scanner
Date: 2000-02-28 00:00:00 UTC
From: Robert Barker <rbarker@austin.rr.com>
Message-ID: <r6wu4.3021$OV.455516@typhoon.austin.rr.com>
Source record: 93118

I wanted to ask if anyone has seen or heard of this. I went by a local golf course today (Lago Vista TX) and happened to notice ANTENNAS on each of the golf carts.
They were very small 3" 800 Mhz looking antennas and then I noticed that there
was a display that was mounted up by the "visor" and facing the driver. It appears to be some sort of data device that measures distance to TEE, etc. But the golf cart that I happened to look at that was in front of the golf club had a text message on the display saying "we need you inside please" It looks like it was sent to an employee who was using the cart.

Does anyone have more info on these systems and what frequency they would operate on?
If they work all over the golf course, I'd say they'd need a range of at least 2 miles.

You mean data squelch. It squelches the scanner, and continues the scan,
instead of locking onto the data. This was covered in the Bill Cheek books,
but you also need the further info in his World Scanner Report to actually
make it work right.

PL stands for "Private Line" which is the same as CTCSS coded squelch.
CSQ is "carrier squelch" which is just plain old squelch. If you're
ever not sure then don't use PL and you'll hear any traffic on that
channel whether they're encoding PL or not. PL just keeps the
unwanted garbage off of the channel.

If you can get a Ham Radio license without knowing something as basic as the difference between the different modes as used in two way radios...then something is wrong with the testing requirements. You obviously have a Ham radio...how about the license too??

push and hold trunk and then the bank you want them in.

NJSP has a ten channel trunked system with one channel the control
"handskake" channel.

860.9625
860.4625
859.9625
859.4625
858.9625
858.4625
857.9625
857.4625
856.9625
856.4625

The contol channel changes several times a day which your scanner should
pick up. Essex County Sheriff is on 852.2875.

You might want to pick up a Scanner Master book, they are very detailed.
Any trouble e-mail me

Bob

I mentioned that the "FCC" used to have a problem with certain words,
NOT myself! Go do a search on other call signs with the suffix TIT and
you will see that they do not come up with anyone. This is yet another
silly attempt to avoid the question and change the subject AGAIN!

Well good, that is a start. You are starting to use thinking to see that there is no connection to having to learn every language in order to not be dumb or lazy. Now continue using your brain and you will also see that there is no logic in having to learn Morse Code if you want to talk into a microphone on HF bands. Nor is one dumb or lazy for not wanting to learn something that has nothing at all to do with what that person wants to do.

Some people like to ride horses, but horse lovers should not force car drivers to learn how to ride a horse before being allowed to drive a car. Some people like Morse Code, but Code lovers should not force people who like to use microphones and speech to talk to people on the radio to learn Morse Code before they are allowed to use microphones on HF bands.

You should ONLY learn Morse Code if you intend to USE Morse Code. If you never have any intention of USING Morse Code, then taking the time to learn it to satisfy someone ELSE is IDIOTIC!

4943. Q: BCT-7 delay

Hello all,

Has anyone experienced a BCT-7, that when someone is talking
it will start scanning? But on other frequencies, this doesn't happen.
I know it checks certain frequencies, but doesn't go to another one,
just scans. I had a dispatcher talking on 155.91, and it started
scanning
until 155.31 and I heard most of this conversation. Is this a problem?

The scanner is 2.5 months old. Thanks in advance to replies.

4944. Digital Police Scanning Listserv

Newsgroup: rec.radio.scanner
Date: 2000-02-28 00:00:00 UTC
From: David Pinero <openbroadcast@my-deja.com>
Message-ID: <89ctk0$779$1@nnrp1.deja.com>
Source record: 93181

Scanning as a hobby is not going to die.

I've registered a ListBot listserv for those interested in a convenient e-mail forum related to the development, introduction, and implementation of genuine digital radio scanners. We can only hope that the viable consumer-level digital scanner will become a reality as soon as possible. Once a skeptic, I have seen and read enough to firmly believe that such a scanner is nearly at hand.

For anyone interested in the future of scanning, this list is an ideal subscription. To subscribe, send a blank e-mail to the following address:

digitalscanners-subscribe@listbot.com

You will be sent the usual ListBot invitation message to confirm your interest and that will be that.

I run this list under the auspice of my Open Broadcasting campaign which typically preaches that technical solutions are not ideal in seeking to promote, preserve, and compensate our ability to monitor local public safety officials for community benefit. However, I conclude that fostering the market to keep pace will demonstrate the will of scannists and their endless persistence in chasing signals down. At some point we must all agree, scannists and public safety officials, that it is cheaper and better for everyone to end that chase. It is the best thing for everyone in public safety to develop Open Broadcasting principles. The very imminent digital scanner will lay to waste the budgets and inconvenience of digital systems originally poised to defeat scannists just as the TrunkTrackers did. While the next step is viable encryption, that means more money, more complexity, and more inconvenience for public safety. As it would be illegal to monitor digitally encrypted systems, it could also mean the beginning of a flourishing and expansive underground that would likely be as successful as the speak-easys. Brother, why go there?

If you have any interest in the digital scanner, I urge you to join this list.

Hi Scott,
The Yupiteru 7100 is pretty deaf below 500 KHz - I'd imagine that you'd not hear anything below 500 KHz unless you were close to the source (NDB at an airport, maybe a LW band broadcast station if you are in Europe, which it looks as if you are...I'm in Australia....)
Above 1000 MHz, the Yupi isn't too bad. The problem you run into is that most transmissions this high up tend to be microwave links, which generally use hyper-directional antennae & low power. You will need to be close to one of the transmitters, preferably in the general direction the dish is facing.
In Australia, some microwave links operate at about 1450 & 1510 MHz. This may be a good place to start listening, but I don't know if Europe would share the same bands for this purpose. Another area to listen to is 1800 MHz, where GSM1800 mobile phones live - but this is too high for the Yupi to receive.
In any case, 99.99% of microwave links carry more than one service - which means that the 'stuff' they carry is likely to be multiplexed - either FDM or via a digital method. You'll be able to hear the FDM stuff - you won't understand it, but it is audible. Digital modulation (either baseband conversion or direct QUAM) just lights up the signal strength meter, sometimes without opening the squelch, and sounds just like noise.
Ta - Jason

There is one problem with these "DC to Daylight" units, there isn't much to listen to.

100-150 kHz is pretty quiet, and anything up around 1 GHz or above tends not to be voice channels, it is used for things like communications bearers that are several MHz in bandwidth and could carry hundreds or thousands of voice channels, video or any number of things. Generally not something you could decode anyway, and certainly not with a normal scanner.

The whip antenna also becomes fairly inefficient up high, you are getting into the territory of needing a microwave dish to pick anything up. Drive up under a microwave relay tower, and you might hear some signals that sound like noise however :-)

>don't need to know philosophy crap to be a good analist programer...

But, a programmer, first and foremost, is a member of the human race,
and to call himself "educated," he should have absorbed knowledge from
a variety of disciplines. Being a productive member of society and making
valuable contributions and important decisions requires more than just
having an education in a narrow field of study.

As an example (not a flame), you could possibly be the best programmer
in Canada, but taking classes in English, Debate, and Radio History
would have enabled you to get your viewpoints across in an easier-to-
understand manner. (And because I never studied French, I'm sure you're
having difficulty understanding my views!)

> I agree that morse code is obsolete -

It's too bad you began with a false premise! Some poll says that code is the second-most used mode on the HF ham bands, but if you tune across the bands, at times you'll hear more transmissions in Morse than on phone (SSB). That certainly doesn't fit the definition of "obsolete."

> You know, there are times I envy you.

Well, I have been lucky to have had so many interesting opportunities and I wouldn't have missed any of them for the world but they've pretty much all been on a one-time-only basis and they're stretched out in time. The TF-104G ride was in '81 and the next time I got a ride in a fast jet, this time a USAF F-4E, was '89. I've had two flights in the variable stability NT-33A, the second being its last evaluation flight before it was retired to the Air Force Museum. In '97 I got to fly the NF-16D VISTA and I'm "owed" an F-18 flight for getting two of our test pilots flights in VISTA, but probably won't get it until I retire in 2002. Not exactly high frequency.

I almost got a flight on a KC-135 two weeks ago, but the receiver plane cancelled on a mechanical down so we didn't go.

ECHELON - YOUR TAX DOLLARS AT WORK - SPYING ON YOU

Well, this week , there has been more evidence that ECHELON exists, according to US News and World Reports. Read The following, and remember, if the US is using Echeclon to spy on Europeans, it is probably spying on YOU as well !

US News And World Reports March 6, 2000 - Page 35

"How the United States spies on you," read the afternoon headline in Le Monde, enough, certainly, to jolt Parisians on their commute home. Across Europe last week, politicians and the press were in full cry over a vast Anglo - American electronic surveillance system Named Echelon. The system scans billions of private e-mails, faxes, and telephone conversations each hour, said a report debated by the European Parliment. Echelon, said Parliment President Nicole Fontaine, is "A violation of the fundamental rights" of European Union Citizens.

The report`s most incendiary charge is that Echelon represents economic espionage non-pareil, helping the United States and its English-speaking allies steal trade - and jobs from non - Anglos. But it cited mostly old, well - known cases. In 1994, U.S, intelligence discovered that French companies were offering bribes to Saudi Arabia and Brazil for multibillion - dollar contracts. Washington complained, and U.S. firms got the deals.

U.S. officials insisted last week that Amercian intelligence does not steal trade secrets for U.S. firms. Even if it tried, the National Security Agency, which oversees Echelon, is drowning in data, thanks to the global communications revolution. "In some ways peopl`s communications have never been safer from becoming intelligence" says intelligence author Jeffery Richelson. And France is certainly no slouch in the field of industrial espionage.

While it has the added spice of Internet - age privacy concerns, the Echelon flap revealed anew how Europe and the United States are increasingly at odds over matters from defense cooperation to genetically - engineered "frankenfoods". Just a few days earlier, a French intelligence report suggested the NSA helped create Microsoft to eavsdrop around the world. The loser this time may be the United Kingdom, whose special intelligence-sharing accord with Washington looks to some like disloyalty ti the EU. George Orwell, was, after all, English.

Source record: 92998

I just got a Cobra SR-15 and I was wondering if anybody out there
would be so kind as to give me some info on it. It's a portable
"Pocket Sized" (well is a lot smaller than some of the other portables
I've seen) model that goes up to 512mhz. It is from 1988 (yes, I know,
it IS old...but got it for a fraction of new cost for equiv. features) but
I mentioned it to someone and they said that it was a good scanner
in it's day.
My two main questions:
1) Needs a new battery...Radio Shaft wants $31 and needs to order.
Would ask Cobra, but their website seems to deny that they ever
sold any kind of scanner (Uniden on the other hand....great ref!)
Can I get one cheaper somewhere else?
2)Are there any mods out there for it? I'm almost 90% sure the guy
who had it got it from Radio Shack...so, maybe.

Thanks!
Mark

4963. RadioShack's response to ID Wobble

Newsgroup: rec.radio.scanner
Date: 2000-02-29 00:00:00 UTC
From: K5DRB <k5drb@cei.net>
Message-ID: <hL%u4.49$UC5.1254112287@typhoon.cei.net>
Source record: 93000

This is a e-mail that I finally received from Radio Shack 1 1/2 months after I sent them concerning the ID Wobble. I guess this wobble is just our eyes playing tricks on us.

We appreciate your e-mail and feedback on our Radio Shack handheld scanner Pro-92, Cat. No. 20-522.

We'd like to ensure you that this scanner meets all of the specifications defined for it. There are no 'bugs' in the scanner firmware. On page 33 of the owner's manual for this scanner, Radio Shack notes that characteristics of what has elsewhere been called "ID WOBBLE." In testing done both here in Fort Worth and in most other locations, ID Wobble does not occur. During product development, extensive testing found it occurs only with a few trunking systems, and, then, usually only if the broadcast signal strength is inadequate. Since the scanner's audio reception is not interrupted, we simply note in the owner's manual that the display will "flutter" when it encounters a weak or wobbling transmission due to interference.

If you own a Pro-92 scanner and have any additional concerns or questions about it's performance, please contact Radio Shack Product Support Center at 1-800-843-7422. One of the telephone agents will be able to answer your questions and assure you this scanner performs as advertised.

The vast majority of our customers are delighted with this scanner as it is an excellent product. We have repeatedly analyzed rate of customer return and found the PRO-92 does not have a high return rate--in spite of a negative web site campaigning to downgrade the product.

Thank you,

Radio Shack Product Support Center

> Do you complain to the College that learning history or speech
> has nothing to do with electronic engineering?

Yes.

> I dont think so!

That figures.
What DOES history or speech, or even gym class have to do with
electronic engineering? That is REALLY stupid!

> If you want the degree you take the required classes or you dont get it.

OR you get a GROL from the FCC, get many years of work experience, then
get a degree for previous experiences.

Does anyone know where I can get a copy of an OWNERS manual for the Icom 7000. A pdf file would be perfect or even a photo copy. My Uncle willed me his great radio but thier is no manual and I cannot figure out what the scanning buttons on the left do. I also wonder if anyone knows if thier are any CI-V type computer adaptor project plans that are available or if anyone knows of a low cost CI-V pre made adaptor on the market.

Thanks for you help and time!

It's said to be the second-most used mode on HF, but at times, I count more Morse QSOs than SSB QSOs.

>it's so old that i'd put that in the archaeology department

It's no older than phone. As soon as a transmitter was invented that could emit continuous waves (CW) it was utilized for phone transmissions.

Hi Jenny,
Could you explain your "every language on this planet" remark? I
don't see the connection. On the HF hams bands, there is really
only one "language" that needs to be learned, and as of 4/15/00,
one only needs to know it at a very low rate.

>Does Jacksonville have there own PD or is it sheriff patrolled.
>
>plan on moving there
>

Jacksonville is incorporated meaning that the Sheriff's office and the police department are one in the same although each of the beaches (Jax. Beach, Atlantic Beach, Neptune Beach), the Port Authority (airport, shipyards, etc.), and the University of North Florida have their own police departments (all in Duval County/Jacksonville city limits) with the Sheriff also having juristiction over these areas as well (being the Sheriff's office). Being incorporated (city limits/county line are the same thing) makes Jacksonville the largest city in the continental U.S. area wise.

The system I have seem is called ParLine. It consists of markers at the tee and green on each hole. The units can also be used to contact the clubhouse to order lunch (from the on screen menu), to contact Emergency Services, and to request another cart when you have had a mechanical failure. The system allows you to keep score, see a full layout of the hole you a replaying, and get distance estimates for drive distance and distance to the green. I can't see any use for knowing the frequency, as it will be purely data.

Not really worth the effort. Much of what I did hear was not in English. Now, this was just before the big boom in FRS radios. You may hear passengers with FRS, but I would imagine listening to "" I am at the pool"" would get pretty lame.

There will always be liars and cheats in amateur radio and everywhere else. I agree that morse code is obsolete - but consider this, we have an international agreement that prohibits amateur operation below 30 MHz WITHOUT morse code profficiency. What level that may be is left up to the individual governments. I believe Japan has had a 5 WPM test for years (correct me if I am wrong - I am not positive). The U.S. finally has moved to 5 WPM, but cannot eliminate the code thing due to international treaty. There are many movements afoot to try and eliminate it entirely.

You are correct in saying some of our VHF/UHF bands are very attractive pieces of real estate. I'm not sure about 6 meters - if someone wants it, they will probably only ask for the bottom half of 6 since channel 2 television runs just above the 6 meter band (and leave us the useless part).

The purpose of amateur radio really was to get people interested and LEARNING about electronics. Most people nowadays simply memorise Q&A manuals. I dropped out of amateur radio. My last transmission (unanswered CQ) was in 1973 - with the previous transmission in 1970. I decided to get my tickets back in 1993. Because I never memorised Q&A manuals, I did not have to study. I went and 'gundecked' the test. I also retested and reclaimed my GROL (used to have my 1st class phone and telegraph - let them expire too). You'll probably find the same situation anywhere - the computer operators and the people who can put 'em together, install and troubleshoot hardware, and have no problems 'tweeking' their systems. You'll also have the cowards and liars spread everywhere also - regardless of class of license (or CBer) or ... etc, etc. You'll also find plenty of good, decent people spread everywhere also.

The $64,000 question is this - how do we attract new people into amateur radio?

73s, Jim (AA2QA)

I own a Pro-91 scanner and I need to find a CTCSS Tone board for it so I can filter out the PL tones on some frequencies. I have tried several manufacturers and all of them say that there is such a thing, however they do not make one. Does anyone know of a place to get one. If not does anyone know how to make one? Thanks in advance.

Concur with the other submitter. I took mine with me on a cruise through the Panama Canal. It was interesting to listen to the inter-ship chatter while we were waiting to go through the canal, but there were more foreign speaking stations than there were english. On the inner ship communications, there was a lot of Italian since I was on Princess Lines and a lot of the crew was Italian. Be careful if you take it off ship in a foreign port. Scanners are taboo in some ports.

Steve,

With this nonsense you get an official promotion to the rank of Lt. in the newsgroup police.

What do past posts of mine have to do with the points and discourse initiated over the one herein?

Once again, I prove the point that the radio newsgroups are not a venue for discussion and debate, but simply a place where the newsgroup police pick and choose the topics of importance or interest.

Believe it or not, my past postings, though they might seem to YOU as whining, actually initiated interesting debate pro and con regarding UPS, and so on. After seeing countless and endless posts here blasting others such as Bill CHeek, Mackey, and so on ad nauseum, you have the gall to complain about me.

I attempt to stir debate in an intelligent and polite manner. I apparently struck a raw nerve with my post, and instead of offering an intelligent response pertinent to fact, you launch a tirade about my past WHINING and CRYING. Then you proceed to dredge up past "quotes" belittling me for all to see here.

I do not see one word in your response relative to what we are discussing here. I guess at 3 AM, with no life and nothing else to do, blasting me was more appropriate.

Congrats Lt...proceed to monitor and snoop the groups, weeding out other whiners and cryers in the pursuit of your version of proper newsgroup discourse.
